

16-Bits Stereo Audio DAC

Low Power Consumption

Low Voltage, Excellent PSRR

FEATURES

- Operation range: 2.5V~6.5V.
- Excellent Power Supply Rejection Ratio(PSRR).
- Low operating current.
- Low power consumption
8mW at $V_{DD}=3.3V$ (Full scale output).
- Low distortion.
- No zero crossing distortion.
- Wide dynamic range(16-bit resolution).
- Voltage Output .
- Cost efficient.
- Fast setting time permits 2*, 4*, and 8* oversampling (serial input) or double speed operation at 4* oversampling .
- Output voltage swing is proportional to supply voltage ($V_{OPP}=V_{DD}/2$).
- The minimum HIGH voltage of digital clocks (WS,DATA and BCK)and the control inputs can be 1.8V at $V_{DD} = 5V$.
- As the power is up, the initial registers of the DAC are 0000Hex, so the DAC output will be $V_{DD}/2$.
- Audio Format : I2S(MS6324)
Right Justified(MS6326)
- Space saving package SOP8, MSOP8, DFN8

APPLICATIONS

- Multimedia system
- MP3, PDA, Portable Digital Audio.
- Set top box.

DESCRIPTION

The MS6324/26 is a 16-bit voltage-output Digital-to-Analog Converter(DAC). It gives the excellent Power Supply Rejection Ratio(PSRR). It features extremely low power dissipation, small package size and easy application. The accuracy of the weight current sources, combined with the unique symmetrical decoding method, preclude zero-crossing distortion and ensures high quality audio reproduction. As the power is up, the initial registers of the DAC are 0000Hex, so the DAC output will be $V_{DD}/2$. These unique features, combined with its exceptional performance, make the MS6324/26 ideally suited for use in portable audio equipment. MS6326 is pin and function compatible with MS6323.

PIN CONFIGURATION

Symbol	Pin	Description
BCK	1	Bit clock input
WS	2	Word select input
DATA	3	Data input
GND	4	Ground
V_{DD}	5	Positive supply voltage
V_{OL}	6	Left channel output
Cap	7	Cap
V_{OR}	8	Right channel output

BLOCK DIAGRAM

TIMING AND DATA FORMAT

The MS6324/26 accepts input serial data formats of 16-bit word length. Left and right data words are time multiplexed. The MSB must always be first. The format of data input is shown in Figs. 2 and 3. With a HIGH level on the word select input (WS), data is placed in the left input register and with LOW level on the WS input, data is placed in the right register (Fig. 1). The data in the input registers are simultaneously latched in the output registers which control the bit switches. Internal bias currents I_{BL} and I_{BR} are each added to the full scale output current I_{FS} in order to achieve the maximum dynamic range at the outputs of OP1 and OP2(Fig. 1). In this way the maximum dynamic range is achieved over the entire power supply range.

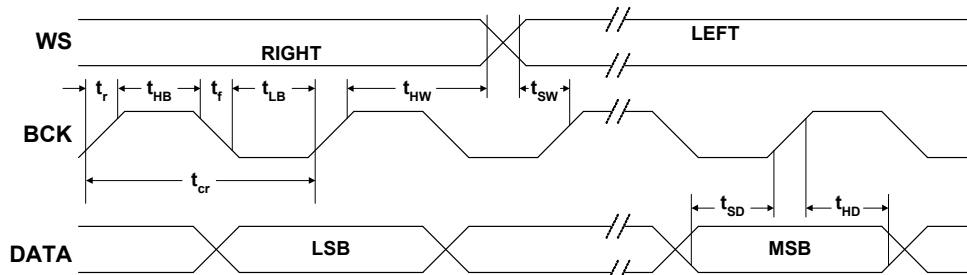

Fig.2 Timing and input signals.

Data format (BCK, WS, DATA)

Symbol	Parameter	Conditions	Min	Typ.	Max	Unit
V_{IL}	Input LOW level		-	-	0.7	V
V_{IH}	Input HIGH level		1.8	-	-	V
