

16-Bits Stereo Audio DAC, Current output, Low Power Consumption, Low Voltage,

特性

- Operation range: 2.7V~6.5V.
- Low power consumption
- Low distortion.
- No zero crossing distortion.
- Wide dynamic range(16-bit resolution).
- Current output
- Space saving package SOP8.
- Fast setting time permits 2*, 4*, and 8* oversampling(serial input) or double speed operation at 4* oversampling .
- Output and bias current are proportional to supply voltage
- Internal timing and control circuits
- Internal bias current ensures maximum dynamic range

APPLICATIONS

- DVD, Multimedia system.

DESCRIPTION

The MS6610 is a 16-bit current-output Digital-to-Analog Converter(DAC). The MS6610 is fabricated in a $0.8\mu m$ CMOS process and features extremely low power dissipation, small package size and ease of application. The accuracy of the matched coarse current sources, combined with the unique symmetrical decoding method, preclude zero-crossing distortion and ensures high quality audio reproduction. These unique features, combined with its exceptional performance, make the MS6610 ideally suited for use in digital audio equipment. MS6610 is pin and function compatible with the Philips, TDA1545.

PINNING

Symbol	Pin	Description	
BCK	1	bit clock input	BCK 1
WS	2	word select input	WS 2
DATA	3	data input	DATA 3
GND	4	ground	GND 4
V _{DD}	5	positive supply voltage	
I _{OL}	6	left channel output	
V _{REF}	7	reference voltage output	
I _{OR}	8	right channel output	I _{OR} 8

TIMING AND DATA FORMAT

The MS6610 accepts input serial data formats of 16-bit word length. Left and right data words are time multiplexed. The MSB(bit 1) must always be First. The format of data input is shown in Figs. 2 and 3. With a LOW level on the word select input(WS) input data is placed in the right input register and with HIGH level on the WS input data is placed in the left register. The data in the input registers are simultaneously latched in the output registers which control the bit switches. Internal bias currents IBL and IBR are each added to the full scale output current IFS in order to achieve the maximum dynamic range at the outputs of OP1 and OP2(Fig. 1). The reference output voltage Vref(Fig. 1) is 2/3 VDD. In this way the maximum dynamic range is achieved over the entire power supply range.
