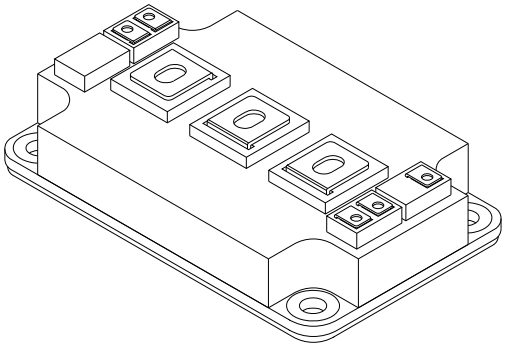
MIL-PRF-38534 & 38535 CERTIFIED FACILITY

M.S.KENNEDY CORP.

600V/600A HALF BRIDGE PEM 4803

FEATURES:

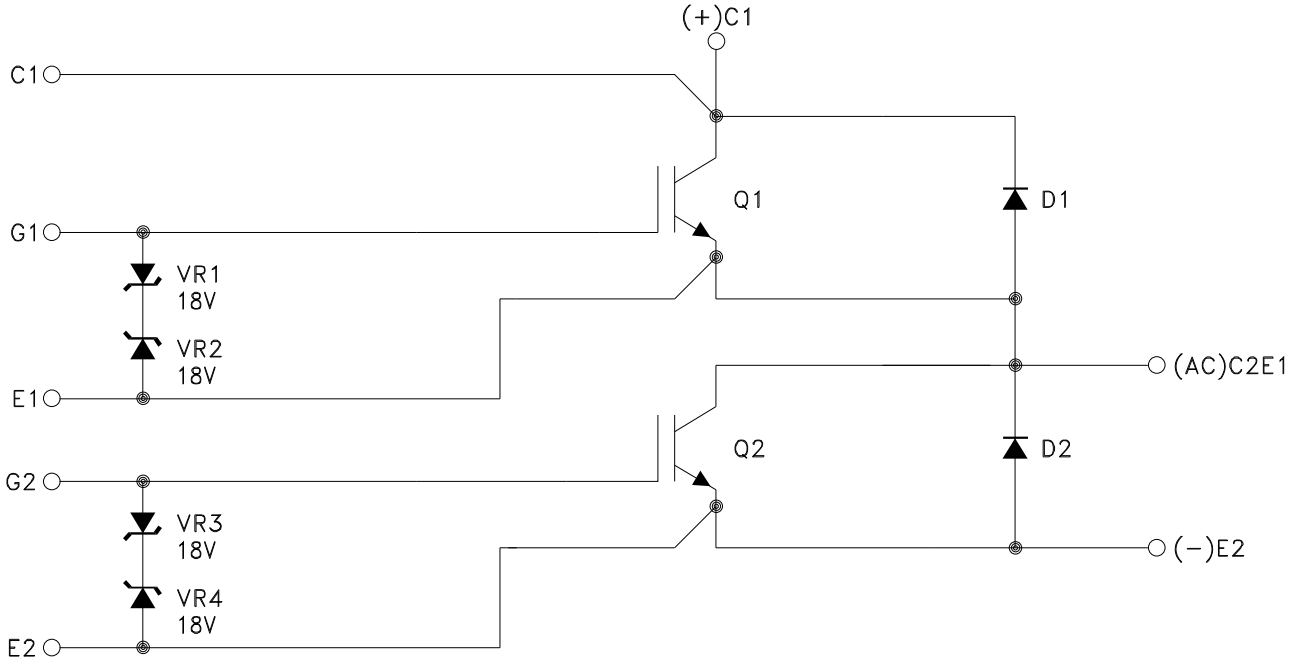
- Half Bridge Configuration
- 600V Rated Voltage
- 600A Continuous Output Current
- Internal Zener Clamps on Gates
- Encapsulation Provides Near Hermetic Performance
- HI-REL Screening Available (Modified 38534)
- Light Weight Domed ALSIC Baseplate
- Robust Mechanical Design for Hi-Rel Applications
- Ultra-Low Inductance Internal Layout
- Withstands 96 Hours HAST and Thermal Cycling (-55°C to +125°C)
- High Side Collector Sense Pin for De-Sat Detection



DESCRIPTION:

The MSK4803 is one of a family of plastic encapsulated modules (PEM) developed specifically for use in military, aerospace and other severe environment applications. The half bridge configuration and 600 volt/600 amp rating make it ideal for use in high current motor drive and inverter applications. The Aluminum Silicon Carbide (AlSiC) baseplate offers superior flatness and light weight; far better than the copper or copper alloys found in most high power plastic modules. The high thermal conductivity materials used to construct the MSK4803 allow high power outputs at elevated baseplate temperatures.

EQUIVALENT SCHEMATIC



TYPICAL APPLICATIONS

- Motor Drives
- Inverters

ABSOLUTE MAXIMUM RATING ⑧

V_{CE}	Collector to Emitter Voltage 600V	T_{ST}	Storage Temperature Range ⑨ . . -55°C to +125°C

NOTES:

① Guaranteed by design but not tested. Typical parameters are representative of actual device performance but are for reference only.
② Industrial grade devices shall be tested to subgroup 1 unless otherwise specified.
③ HI-REL grade devices ("H" suffix) shall be 100% tested to subgroups 1, 2 and sample tested to subgroup 3.
④ Subgroups 4 testing available upon request.
⑤ Subgroup 1, 4 T_A = +25°C
2 T_A = +125°C
3 T_A = -55°C
⑥ All specifications apply to both the upper and lower sections of the half bridge.
⑦ V_{GE} = 15V unless otherwise specified.
⑧ Continuous operation at or above absolute maximum ratings may adversly effect the device performance and/or life cycle
⑨ Internal solder reflow temperature is 180°C, do not exceed.

THERMAL CALCULATIONS

Power dissipation and maximum allowable temperature rise involve many variables working together. Collector current, PWM duty cycle and switching frequency all factor into power dissipation. DC losses or "ON-TIME" losses are simply V_{CE}(SAT) x Collector Current x PWM duty cycle. For the MSK4803, V_{CE}(SAT) = 2.5V max., and at 600 amps and a PWM duty cycle of 30%, DC losses equal 450 watts. Switching losses vary proportionally with switching frequency. The MSK4803 typical switching losses at V_{CE} = 300V and I_{CE} = 600A are about 98mJ, which is simply the sum of the turn-on switching loss and the turn-off switching loss. Multiplying the switching frequency times the switching losses will result in a power dissipation number for switching. The MSK4803, at 5KHz, will exhibit switching power dissipation of 490 watts. The total losses are the sum of DC losses plus switching losses, or in this case, 940 watts total. 940 watts x 0.09°C/W thermal resistance equals 85 degrees of temperature rise between the case and the junction. Subtracting 85°C from the maximum junction temperature of 150°C equals 65°C maximum case temperature for this example.

V_{CE}(SAT) x IC x PWM duty cycle = 2.5V x 600 amps x 30% = 450 watts DC losses

Turn-on switching loss + Turn-off switching loss = Total switching losses = 2.5 + 73 = 98mJ

Total switching loss x PWM frequency = Total switching power dissipation = 98mJ x 5KHz = 490 watts

Total power dissipation = DC losses + switching losses = 450 + 490 = 940 watts

Junction temperature rise above case = Total power dissipation x thermal resistance

940 watts x 0.09°C/W = 84.6°C temperature rise above case

Maximum junction temperature - junction temperature rise = maximum baseplate temperature

150°C - 85°C = 65°C
