M500DC 1.8-Inch TCG Enterprise SATA NAND Flash SSD

MTFDDAA120MBB-2AE16ABYY, MTFDDAA240MBB-2AE16ABYY, MTFDDAA480MBB-2AE16ABYY, MTFDDAA800MBB-2AE16ABYY

Features

- Micron® 20nm MLC NAND Flash
- SATA 6 Gb/s interface
- TCG Enterprise Ver 1.0 Final Rev 3.0 compliant self-encrypting drive (SED)
- ATA modes supported
  - PIO mode 3, 4
  - Multiword DMA mode 0, 1, 2
  - Ultra DMA mode 0, 1, 2, 3, 4, 5, 6
- 512-byte sector size support
- Native command queuing support with 32-command slot support
- ATA-8 ACS2 command set compliant
- ATA security feature command set and password login support
- Security erase command set: fast and secure erase
- 120GB performance (steady state) [1, 2]
  - Sequential 128KB read: 425 MB/s
  - Sequential 128KB write: 200 MB/s
  - Random 4KB read: 63,000 IOPS
  - Random 4KB write: 23,000 IOPS
  - READ/WRITE latency: 0.50ms/1.5ms (TYP)
- 240GB performance (steady state) [1, 2]
  - Sequential 128KB read: 425 MB/s
  - Sequential 128KB write: 330 MB/s
  - Random 4KB read: 63,000 IOPS
  - Random 4KB write: 33,000 IOPS
  - READ/WRITE latency: 0.50ms/1.5ms (TYP)
- 480GB performance (steady state) [1, 2]
  - Sequential 128KB read: 425 MB/s
  - Sequential 128KB write: 375 MB/s
  - Random 4KB write: 63,000 IOPS
  - Random 4KB write: 35,000 IOPS
  - READ/WRITE latency: 0.50ms/1.5ms (TYP)
- 800GB performance (steady state) [1, 2]
  - Sequential 128KB read: 425 MB/s
  - Sequential 128KB write: 375 MB/s
  - Random 4KB read: 65,000 IOPS
  - Random 4KB write: 24,000 IOPS
  - READ/WRITE latency: 0.50ms/1.5ms (TYP)
- Reliability
  - MTTF: 2 million device hours[3]
  - Static and dynamic wear leveling
  - Uncorrectable bit error rate (UBER): <1 sector per 10^{16} bits read
  - End-to-end data protection
  - Enhanced power-loss data protection with data protection capacitor monitoring
- Self-monitoring, analysis, and reporting technology (SMART) command set
- Hot-plug capable
- Endurance: Total bytes written (TBW)
  - 120GB: 0.5PB; 240GB: 1.0PB; 480GB: 1.9PB; 800GB: 1.9PB
- Capacity[4] (unformatted): 120GB, 240GB, 480GB, 800GB
- Mechanical: 5.0mm height
  - Micro SATA connector: 3.3V ±5%
  - 1.8-inch drive: 78.5mm x 54mm x 5mm
  - Conforms to SSF standards
- RoHS-compliant package
- Field-upgradeable firmware
- Power consumption: <6.0W (TYP); <6.3W (TYP) for 800GB
- Operating temperature
  - Commercial (0°C to 70°C)[5]

Notes:
1. Typical I/O performance numbers as measured using Iometer with a queue depth of 32 and write cache disabled.
2. 4KB transfers used for READ/WRITE latency values.
3. The product achieves a MTTF based on population statistics not relevant to individual units.
4. 1GB = 1 billion bytes; formatted capacity is less.
5. Drive case temperature.

Part Numbering Information

Micron's M500DC SSD is available in different configurations and densities. Visit micron.com for a list of valid part numbers.

General Description

Micron's M500DC solid state drive (SSD) uses a single-chip controller with a SATA interface on the system side and n-channels of Micron NAND Flash internally. Packaged in an HDD replacement enclosure, the SSD integrates easily in existing storage infrastructures.

The M500 DC is designed to support and manage the needs of enterprise platforms that utilize high IOPs traffic previously supported solely by SLC solutions, it provides the performance, endurance, and data integrity required by these growing environments.

Logical Block Address Configuration

The drive is set to report the number of logical block addresses (LBA) that will ensure sufficient storage space for the specified density. Standard LBA settings, based on the IDEMA standard (LBA1-02), are shown below.

Table 1: Standard LBA Settings – 512-Byte Sector Size

Drive Size	Total LBA		Max LBA		User Available Bytes
	Decimal	Hexadecimal	Decimal	Hexadecimal	(Unformatted)
120GB	234,441,648	DF94BB0	234,441,647	DF94BAF	120,034,123,776
240GB	468,862,128	1BF244B0	468,862,127	1BF244AF	240,057,409,536
480GB	937,703,088	37E436B0	937,703,087	37E436AF	480,103,981,056

Interface Connectors

The SATA signal segment interface cable has four conductors and three ground connections. As shown in Package Dimensions, the cable includes a 7-pin signal segment and a 9-pin power segment arranged in a single row with a 1.27mm (0.050in) pitch.

Performance

Measured performance can vary for a number of reasons. The major factors affecting drive performance are the density of the drive and the interface of the host. Additionally, overall system performance can affect the measured drive performance. When comparing drives, it is recommended that all system variables are the same, and only the drive being tested varies.

Performance numbers will vary depending on the host system configuration.

Table 7: Drive Performance

Density	120GB	240GB	480GB	800GB	Unit
Sequential read (128KB transfer)	425	425	425	425	MB/s
Sequential write (128KB transfer)	200	330	375	375	MB/s
Random read (4KB transfer)	63,000	63,000	63,000	65,000	IOPS
Random write (4KB transfer)	23,000	33,000	35,000	24,000	IOPS
READ latency (TYP)	0.50	0.50	0.50	0.50	ms
WRITE latency (TYP)	1.5	1.5	1.5	1.5	ms

Notes:
1. Typical I/O performance numbers as measured using Iometer with a queue depth of 32 and write cache disabled.
2. Iometer measurements are performed in the steady state region.
3. 4KB transfers used for READ/WRITE latency values.
4. System variations may affect measured results.

Reliability

Micron's SSDs incorporate advanced technology for defect and error management. They use various combinations of hardware-based error correction algorithms and firmware-based static and dynamic wear-leveling algorithms.

Over the life of the SSD, uncorrectable errors may occur. An uncorrectable error is defined as data that is reported as successfully programmed to the SSD but when it is read out of the SSD, the data differs from what was programmed.

Table 8: Uncorrectable Bit Error Rate

Uncorrectable Bit Error Rate	Operation
<1 sector per 10^{16} bits	READ

Mean Time to Failure

Mean time to failure (MTTF) for the SSD can be predicted based on the component reliability data using the methods referenced in the Telcordia SR-332 reliability prediction procedures for electronic equipment.

Table 9: MTTF

Density	MTTF (Operating Hours)[1]
120GB	2 million
240GB	2 million
480GB	2 million
800GB	2 million

Note: 1. The product achieves a MTTF of 2 million hours based on population statistics not relevant to individual units.

Endurance

Endurance for the SSD can be predicted based on the usage conditions applied to the device, the internal NAND component cycles, the write amplification factor, and the wear-leveling efficiency of the drive. Total bytes written measured with 55°C case temperature within the total bytes written values listed in this document. The table below shows the drive lifetime for each SSD density based on predefined usage conditions.

Table 10: Drive Lifetime

Density	Drive Lifetime (Total Bytes Written)
120GB	0.5PB
240GB	1.0PB
480GB	1.9PB
800GB	1.9PB

Note: 1. Total bytes written were calculated assuming drive is 100% full (user capacity) and a workload of 100% random, aligned 4KB writes.

Electrical Characteristics

Stresses greater than those listed may cause permanent damage to the device. This is a stress rating only, and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Table 11: SATA Power Consumption

Density	Idle Average	Sequential Write Max (128KB transfer)	Sequential Read Max (128KB transfer)
120GB	1.2W	4W	<4W
240GB	1.2W	5W	<5W
480GB	1.2W	6W	<6W
800GB	1.2W	6.3W	<6.3W

Notes:
1. Data taken at 25°C using a 6 Gb/s SATA interface.
2. Sequential power measured during Iometer with 128KB transfer, RMS average over a 500ms window.

Table 12: Maximum Ratings

Parameter/Condition	Symbol	Min	Max	Unit
Voltage input	V33	3.14	3.46	V
Operating temperature	T_C	0	70	°C
Non-operating temperature	–	–40	85	°C
Rate of temperature change	–	–	20	°C/hour
Relative humidity (non-condensing)	–	5	95	%

Table 13: Shock and Vibration

Parameter/Condition	Specification
Operating shock	1500G/0.5ms
Operating vibration	10–500Hz at 3.1G

Compliance

Micron SSDs comply with the following:

- RoHS
- CE (Europe): EN55022, 2006 + A1:2007 and EN55024, 1998 + A1:2001 + A2:2003
- FCC: CFR Title 47, Part 15 Class A
- UL/cUL: approval to UL-60950-1, 2nd Edition, IEC 60950-1:2005 (2nd Edition); Am 1:2009, EN 60950-1 (2006) + A11:2009+ A1:2010 + A12:2011
- BSMI (Taiwan): approval to CNS 13438
- C-TICK (Australia, New Zealand): approval to AS/NZS CISPR22
- KCC RRL (Korea): approval to KCC-REM-MU2-P400m25
- W.E.E.E.: Compliance with EU WEEE directive 2002/96/EC. Additional obligations may apply to customers who place these products in the markets where WEEE is enforced
- TUV (Germany): approval to IEC60950/EN60950
- V_{CCI}
- IC (Canada):
  - This Class B digital apparatus complies with Canadian ICES-003.
  - Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

FCC Rules

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.
