### GENERAL DESCRIPTION

Aeroflex's MUX8507 is a radiation tolerant, 64 channel multiplexer MCM (multi-chip module).

The MUX8507 has been specifically designed to meet exposure to radiation environments. It is available in a 96 lead High Temperature Co-Fired Ceramic (HTCC) Quad Flatpack (CQFP). It is guaranteed operational from -55°C to +125°C. Available screened in accordance with MIL-PRF-38534, the MUX8507 is ideal for demanding military and space applications.

### ORGANIZATION AND APPLICATION

The MUX8507 consists of six 16 channel multiplexers arranged as shown in the Block Diagram. The MUX8507 design is inherently radiation tolerant.

#### A SECTION

Thirty-two (32) Kelvin measurement channels addressable by bus A<sub>0</sub>~A<sub>3</sub>, in two 16 channel blocks, each block enabled separately. Each block connects the addressed channel to two outputs, "Output" and "Current". This technique enables selecting and reading a remote resistive sensor without the multiplexer resistance being part of the measurement. For grounded sensors, this is done by passing current to the sensor by means of the "Current" pin and reading the resultant voltage (proportional to the sensor resistance) at the "Output" pin.

#### B SECTION

Thirty-two (32) channels addressable by bus B<sub>0</sub>~B<sub>3</sub>, in two 16 channel blocks, each block enabled separately. Each block connects the addressed channel to one output. By paralleling the channel inputs and enables, this section can be converted to act like one of the 16 channel blocks of the A section.
