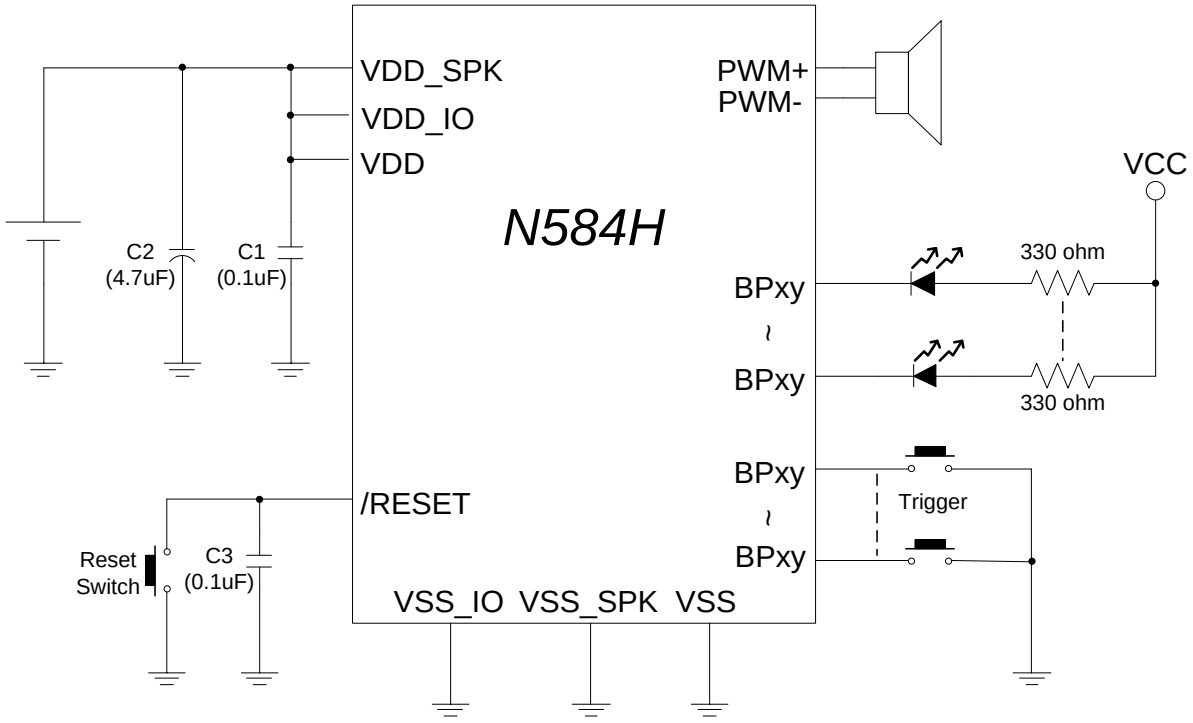
6. Typical Application Circuit



Notes:

1. In PCB layout, VSS_IO, VSS_SPK should be connected to VSS; and VDD_IO, VDD_SPK should be connected to VDD
2. The C1 capacitor 0.1uF is recommended to prevent the IC from hang-up as battery power bouncing. For power line layout in extended length, suggest C1 to be 1uF.
3. The C2 capacitor 4.7uF shunts between VDD and GND is for stabilized power noise
4. The C3 capacitor 0.1uF shunts between /Reset and GND is for power reset stability
5. BPxy means I/O pins. X: 0 ~ 3; Y: 0 ~ 3
