All dimensions in inches; nuts dash size 7 and larger use NAS1291 prefix, stainless steel nuts use NAS1291C designation.

- (a) Threads in accordance with MIL-S-7742 before lubrication
- (b) Bearing surface shall be square with pitch diameter within X when measured in accordance with MIL-N-25027
- (c) Dimension across flats includes deformation of locking device
- (d) Minimum length of each wrenching corner
- (e) Minimum distance from the washer face of the nut to the beginning of the minimum length E of each wrenching corner
- (f) For alloy steel nuts. For A286 nuts multiply these values by .694

Material: Alloy steel or A286 corrosion resistant steel (NAS1291C designation)

Plating: Plain cadmium-plated nuts in accordance with QQ-P-416, Type II, Class 3. Dry film lubricated nuts in accordance with QQ-P-416. NAS1291C designation nuts: silver plate per AMS2410

Lubricant: Dry film lubricant approved in accordance with MIL-N-25027. Other lubricants soluble in the cleaner specified in procurement specification. For USAF applications, nuts treated with dry film lubricants shall not be utilized in integral fuel tanks.

Hardness: Rockwell C49 maximum (alloy steel nuts)

Break all sharp edges and remove all hanging burrs and slivers which might become dislodged under usage. Surface roughness in accordance with MIL-STD-10. Unless otherwise specified the surface roughness shall not exceed 125 uin. These nuts shall be used in accordance with the limitations of MS33588.
