

NB7V58M

1.8 V / 2.5 V / 3.3 V Differential 2:1 Clock / Data Multiplexer / Translator with CML Outputs

Multi-Level Inputs w/ Internal Termination

Description

The NB7V58M is a high performance differential 2-to-1 Clock or Data multiplexer. The differential inputs incorporate internal 50 Ω termination resistors that are accessed through the VT pin. This feature allows the NB7V58M to accept various logic level standards, such as LVPECL, CML or LVDS.

The NB7V58M produces minimal Clock or Data jitter operating up to 7 GHz or 10.7 Gb/s, respectively. As such, the NB7V58M is ideal for SONET, GigE, Fiber Channel, Backplane and other Clock/Data distribution applications.

The 16 mA differential CML outputs provide matching internal 50 Ω terminations and 400 mV output swings when externally terminated with a 50 Ω resistor to V_{CC} .

The NB7V58M is offered in a low profile 3 mm x 3 mm 16-pin QFN package and is a member of the GigaComm™ family of high performance Clock / Data products. For applications that require equalization, the pin-compatible NB7VQ58M is also available. Application notes, models, and support documentation are available at www.onsemi.com.
