1.0 GENERAL DESCRIPTION

1.1 Introduction

NE156QHM-NY6 V8.0 is a color active matrix TFT LCD module using amorphous silicon TFT's (Thin Film Transistors) as an active switching devices. This module has a 15.6 inch diagonally measured active area with QHD resolutions (2560 horizontal by 1440 vertical pixel array). Each pixel is divided into RED, GREEN, BLUE dots which are arranged in vertical stripe and this module can display 16.7(8bit) colors and color gamut sRGB 100% Typ., 95% min. The TFT-LCD panel used for this module is a low reflection and higher color type. Therefore, this module is suitable for Notebook PC. The LED driver for back-light driving is built in this model.

All input signals are eDP1.4b interface compatible.

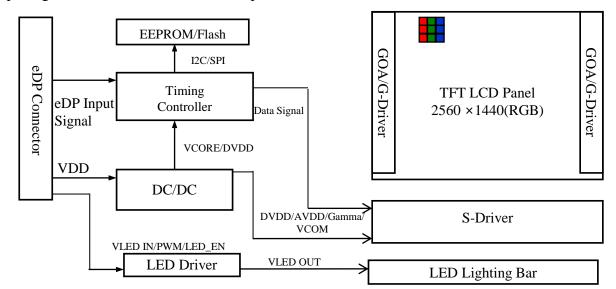

Figure 1. Drive Architecture

1.2 Features

- 4 lane eDP interface with 5.4Gbps link rates
- Thin and light weight, Low Blue Light
- 16.7M(8bit) color depth, color gamut sRGB 100% Typ., 95% min
- Single LED lighting bar (Bottom side/Horizontal Direction)
- Data enable signal mode
- Side mounting frame
- Green product (RoHS & Halogen free product)
- On board LED driving circuit
- Low driving voltage and low power consumption
- On board EDID chip
- DPCD Version 1.4
- Function: Freesync / Gsync / PSR2

2.0 ABSOLUTE MAXIMUM RATINGS

The followings are maximum values which, if exceed, may cause faulty operation or damage to the unit. The operational and non-operational maximum voltage and current values are listed in Table 2.

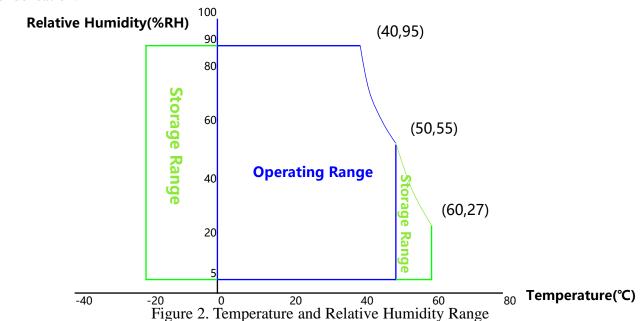

< Table 2. Absolute Maximum Ratings>

Ta=25+/-2°C

Parameter	Symbol	Min.	Max.	Unit	Remarks	
Power Supply Voltage	V _{DD}	-0.3	4.0	V		
eDP input Voltage	V _{eDP}	0	2.0	V	Note 1	
Logic Supply Voltage	V _{IN}	V _{SS} -0.3	V _{DD} +0.3	V		
Operating Temperature	T _{OP}	0	+50	°C	N-4- 2	
Storage Temperature	T _{ST}	-20	+60	°C	Note 2	

Notes:

- 1. Permanent damage to the device may occur if maximum values are exceeded functional operation should be restricted to the condition described under normal operating conditions.
- 2. Temperature and relative humidity range are shown in the figure below.
- 95 % RH Max. (40 °C \geq Ta) Maximum wet bulb temperature at 39 °C or less. (Ta > 40 °C) No condensation.

4.0 OPTICAL SPECIFICATION

4.1 Overview

The test of optical specifications shall be measured in a dark room (ambient luminance ≤ 1 lux and temperature $= 25\pm 2\,^{\circ}\text{C}$) with the equipment of luminance meter system (PR730&PR810) and test unit shall be located at an approximate distance 50cm from the LCD surface at a viewing angle of θ and Φ equal to 0°. We refer to $\theta \emptyset = 0$ (= θ 3) as the 3 o'clock direction (the "right"), $\theta \emptyset = 90$ (= θ 12) as the 12 o'clock direction ("upward"), $\theta \emptyset = 180$ (= θ 9) as the 9 o'clock direction ("left") and $\theta \emptyset = 270$ (= θ 6) as the 6 o'clock direction ("bottom"). While scanning θ and/or \emptyset , the center of the measuring spot on the display surface shall stay fixed. The backlight should be operating for 30 minutes prior to measurement. VDD shall be 3.3+/- 0.3V at 25°C. Optimum viewing angle direction is 6 'clock.

BOE	PRODUCT GROUP	REV	ISSUE DATE
	Customer Spec	Rev. 0	2021.12.25

Notes:

- 1. Viewing angle is the angle at which the contrast ratio is greater than 10. The viewing angles are determined for the horizontal or 3, 9 o'clock direction and the vertical or 6, 12 o'clock direction with respect to the optical axis which is normal to the LCD surface (see Figure 7).
- 2. Contrast measurements shall be made at viewing angle of Θ = 0 and at the center of the LCD surface. Luminance shall be measured with all pixels in the view field set first to white, then to the dark (black) state . (see Figure 7) Luminance Contrast Ratio (CR) is defined mathematically.

- 3. Center Luminance of white is defined as luminance values of 5 point average across the LCD surface. Luminance shall be measured with all pixels in the view field set first to white. This measurement shall be taken at the locations shown in Figure 8 for a total of the measurements per display.
- 4. The White luminance uniformity on LCD surface is then expressed as : ΔY =Minimum Luminance of 5(or 13) points / Maximum Luminance of 5(or 13) points.(see Figure 8 and Figure 9).
- 5. The color chromaticity coordinates specified in Table 5 shall be calculated from the spectral data measured with all pixels first in red, green, blue and white. Measurements shall be made at the center of the panel.
- 6. The electro-optical response time measurements shall be made as Figure 10 by switching the "data" input signal ON and OFF. The times needed for the luminance to change from 10% to 90% is T_f, and 90% to 10% is T_r.
- 7. Cross-Talk of one area of the LCD surface by another shall be measured by comparing the luminance (YA) of a 10±1mm diameter area, with all display pixels set to gray 127(of 0 to 255), to the luminance (YB) of that same area when any adjacent area is driven dark. The luminance ratio shall not exceed 1:1.05 (See Figure 11).

8.0 POWER SEQUENCE

To prevent a latch-up or DC operation of the LCD module, the power on/off sequence shall be as shown in below.

- \bullet 0.5ms \leq T1 \leq 10 ms
- \bullet 0ms < T2 \le 200 ms
- \bullet 0ms < T3 \leq 200 ms
- T4+T5+T6+T8>80ms
- 50ms < T8
- 0ms < T9

- 100 ms < T10 < 500 ms
- \bullet 0.5ms \leq T11 \leq 10 ms
- $0 \text{ oms} \leq T12$
- 0ms < T14
- 0ms < T15
- 0ms < T16

Notes:

- 1. When the power supply VDD is 0V, keep the level of input signals on the low or keep high impedance.
- 2. Do not keep the interface signal high impedance when power is on. Back Light must be turn on after power for logic and interface signal are valid.

9.0 Connector Description

Physical interface is described as for the connector on LCM.

These connectors are capable of accommodating the following signals and will be following components.

9.1 TFT LCD Module

< Table 13. Signal Connector >

Connector Name /Description	For Signal Connector
Manufacturer	IPEX
Type/ Part Number	20455-040E-66
Mating Housing/ Part Number	I-PEX 20454-040T

10.0 MECHANICAL CHARACTERISTICS

10.1 Dimensional Requirements

Figure 23shows mechanical outlines for the model NE156QHM-NY6 V8.0. Other parameters are shown in Table 14.

<Table 14. Dimensional Parameters>

Parameter	Specification	Unit
Active Area	344.2176(H) ×193.6224(V)	mm
Number of pixels	$2560(H) \times 1440 (V)(1 \text{ pixel} = R + G + B \text{ dots})$	pixels
Pixel pitch	134.46(H) ×134.46(V)	um
Pixel arrangement	RGB Vertical stripe	
Display colors	16.7M(8bit)	
Display mode	Normally Black	
Dimensional outline	ional outline 350.66±0.3 (H)*205.25±0.3(V)(W/O PCB)*2.6 (Max) 350.66±0.3 (H)*205.25±0.3(V)(W/PCB)*4.6(Max)	
Weight	310(max)	g

10.2 Mounting

See Figure 23.

10.3 Anti-Glare and Polarizer Hardness.

The surface of the LCD has an Anti-Glare coating to minimize reflection and a 3H hardness coating to reduce scratching.

10.4 Light Leakage

There shall not be visible light from the back-lighting system around the edges of the screen as seen from a distance 50cm from the screen with an overhead light level of 350lux.

11.0 RELIABILITY TEST

The reliability test items and its conditions are shown in below.

<Table 15. Reliability Test>

No	Test Items	Conditions			
1	High temperature storage test	Ta = 60°C, 60%RH, 240 hrs			
2	Low temperature storage test	Ta = -20°C, 240 hrs			
3	High temperature & high humidity operation test	Ta = 50°C, 80%RH, 240 hrs			
4	High temperature operation test	Ta = 50°C, 60%RH, 240 hrs			
5	Low temperature operation test	Ta = 0°C, 240 hrs			
6	Thermal shock	Ta = -20 °C \leftrightarrow 60 °C (0.5 hr), 60% ±3% RH, 100 cycle			
7	Vibration test (non-operating)	Ta = 25°C, 60%RH, 1.5G, 10~500Hz, Sine X,Y,Z / Sweep rate: 1 hour	Note 1		
8	Shock test (non-operating)	Ta = 25°C, 60%RH, 220G, Half Sine Wave 2msec±X,±Y,±Z Once for each direction	Note 1		
9	Electro-static discharge test (operating)	Air : 150 pF , 330Ω , $\pm 15 \text{ KV}$ Contact : 150 pF , 330Ω , $\pm 8 \text{ KV}$ Ta = 25° C, 60% RH,	Note 2		

Notes:

- 1. The fixture must be hard enough, so that the module would not be twisted or bent.
- 2. Self- recovery and restart recovery is allowed. No hardware failures.

12.0 HANDLING & CAUTIONS

- (1) Cautions when taking out the module
 - Pick the pouch only, when taking out module from a shipping package.
- (2) Cautions for handling the module
 - As the electrostatic discharges may break the LCD module, handle the LCD module with care. Peel a protection sheet off from the LCD panel surface as slowly as possible.
 - As the LCD panel and back light element are made from fragile glass material, impulse and pressure to the LCD module should be avoided.
 - As the surface of the polarizer is very soft and easily scratched, use a soft dry cloth without chemicals for cleaning.
 - Do not pull the interface connector in or out while the LCD module is operating.
 - Put the module display side down on a flat horizontal plane.
 - Handle connectors and cables with care.
- (3) Cautions for the operation
 - When the module is operating, do not lose CLK, ENAB signals. If any one of these signals is lost, the LCD panel would be damaged.
 - Obey the supply voltage sequence. If wrong sequence is applied, the module would be damaged.
- (4) Cautions for the atmosphere
 - Dew drop atmosphere should be avoided.
 - Do not store and/or operate the LCD module in a high temperature and/or humidity atmosphere. Storage in an electro-conductive polymer packing pouch and under relatively low temperature atmosphere is recommended.
- (5) Cautions for the module characteristics
 - Do not apply fixed pattern data signal to the LCD module at product aging.
 - Applying fixed pattern for a long time may cause image sticking.
- (6) Other cautions
 - Do not disassemble and/or re-assemble LCD module.
 - Do not re-adjust variable resistor or switch etc.
 - When returning the module for repair or etc. Please pack the module not to be broken. We recommend to use the original shipping packages.

17.0 GENERAL PRECAUTIONS

17.1 HANDLING

- (1) When the module is assembled, It should be attached to the system firmly using every mounting holes.
- Be careful not to twist or bend the modules.
- (2) Refrain from strong mechanical shock or any force to the module. Otherwise, it may cause improper operation or damage to the module.
- (3) Wipe off water droplets or oil immediately. If you leave the droplets for a long time, Staining and discoloration may occur.
- (4) If the surface of the polarizer is dirty, clean it using some absorbent cotton or soft cloth.
- (5) The desirable cleaners are water, IPA (Isopropyl Alcohol) or Hexane. Do not use Ketone type materials(ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanently damage to the polarizer due to chemical reaction.
- (6) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth .In case of contact with hands, legs or clothes, it must be washed away thoroughly with soap.
- (7) Protect the module from static, it may cause damage to the module.
- (8) Use fingerstalls with soft gloves to keep display clean during the incoming inspection and assembly process.
- (9) Do not disassemble the module.
- (10) Do not pull or fold the LED FPC.
- (11) Do not touch any component which is located on the back side.
- (12) Protection film for polarizer on the module shall be slowly peeled off just before use so that the electrostatic charge can be minimized.
- (13) Pins of connector shall not be touched directly with bare hands.

17.2 STORAGE

- (1) Do not leave the module in high temperature, and high humidity for a long time. It is highly recommended to store the module with temperature from 0 to 35° C and relative humidity of less than 70%.
- (2) Do not store the TFT-LCD module in direct sunlight.
- (3) The module shall be stored in a dark place. It is prohibited to apply sunlight or fluorescent light during the store.

	NE156QHM-NY6 HW:V8.0 Product Specification Rev. 0	44 OF 68

PRODUCT GROUP	REV	ISSUE DATE
Customer Spec	Rev. 0	2021.12.25

17.3 OPERATION

- (1) Do not connect, disconnect the module in the "Power On" condition.
- (2) Power supply should always be turned on/off by following item 8.0 "Power on/off sequence".
- (3) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.
- (4) The standard limited warranty is only applicable when the module is used for general notebook applications. If used for purposes other than as specified, BOE is not to be held reliable for the defective operations. It is strongly recommended to contact BOE to find out fitness for a particular purpose.

17.4 OTHERS

- (1) Avoid condensation of water. It may result in improper operation or disconnection of electrode.
- (2) Do not exceed the absolute maximum rating value. (the supply voltage variation, input voltage variation, Variation in part contents and environmental temperature, so on) Otherwise the module may be damaged.
- (3) If the module displays the same pattern continuously for a long period of time, it can be the situation when The "image sticks" to the screen.
- (4) This module has its circuitry PCB's on the rear or bottom side and should be handled carefully to avoid being stressed.

Appendix A

The Measurement Methods for the Dimensions of Module

Caliper:

- a. Length of Outline
- b. Width of Outline (Without/With PCB)
- c. Thickness of Outline (Without/ With PCB)

Coordinate Measuring Machine:

CF Polarizer Size

Active Area Size

Active Area to Outline (Without Tape Wrinkle or Bulged)

Active Area to CF Polarizer

The Distance of Bracket Holes

P-Cover to Outline (Without Tape Wrinkle or Bulged)

Length of P-Cover

Connector Pin 1 to Outline (Without Tape Wrinkle or Bulged)

Height Gauge: The Different Height of Root and Top on the Bracket

(Need to Calculate From Bracket Angle Spec.)

Feeler Gauge: The Warpage Spec. of Module

Notes:

Except the Critical Dimensions as Above, Other Dimensions are Measured by Coordinate Measuring Machine If Necessary.

Impedance Profile Values for Cable Assembly

Purpose

Cable Impedance Profile 100ohm for Cable Assembly

SPEC. NUMBER	SPEC. TI

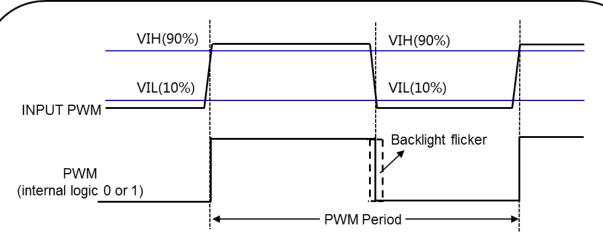

BOE	PRODUCT GROUP		REV	ISSUE DATE		
		Customer Spec	Rev. 0	2021.12.25		
Appendix C						
	Main Link Pixel Freq information value of MSA data					
Logic Vdd 90% HPD from Sink Sink Aux Read EDID Link training Video data Source Main-Link TP1 TP2 Frame1 Frame2 Frame3 Frame4 Frame5 Pixel Freq information						
Purpose	in 2. B	need to fix pixel freq information value of MSA of itial abnormal pixel freq information value from it OE can read DPCD to check this value. Ex: BIOS 7G.	incoming after p	ower on.

Appendix C

Example:

Freq	Cycle Time	PWM Rising Time	PWM Falling Time
200Hz	5ms	≤1us	≤1us
1KHz	1ms	≤200ns	≤200ns

Purpose

- 1. LED driver need to calculate the duty cycle of input PWM signal.
- To avoid backlight flicker visible on LCD, system input PWM suggest: PWM rising ≤ 200ppm*cycle time; PWM falling ≤ 200ppm*cycle time.
