

4-Channel Electronic Volume with Input Selector

■ GENERAL DESCRIPTION

The **NJW1195A** is a 4-channel electronic volume with 4-in 2-out stereo audio selector. It performs low noise and low distortion characteristics with resistance ladder circuit.

The **NJW1195A** is also available for 2-channel differential transmission electronic volume with 2-in 1-out stereo audio selector by a differential transmission select function.

All of functions are controlled via three-wired serial bus. Selectable 4-Chip address is available for using four chips on same serial bus line.

It's suitable for two-channel stereo system and or multi-channel audio system.

At the volume attenuated, the **NJW1195A** improves low distortion compared with NJW1195. Furthermore, the **NJW1195A** supports both single power supply operation and dual power supply operation.

■ PACKAGE OUTLINE

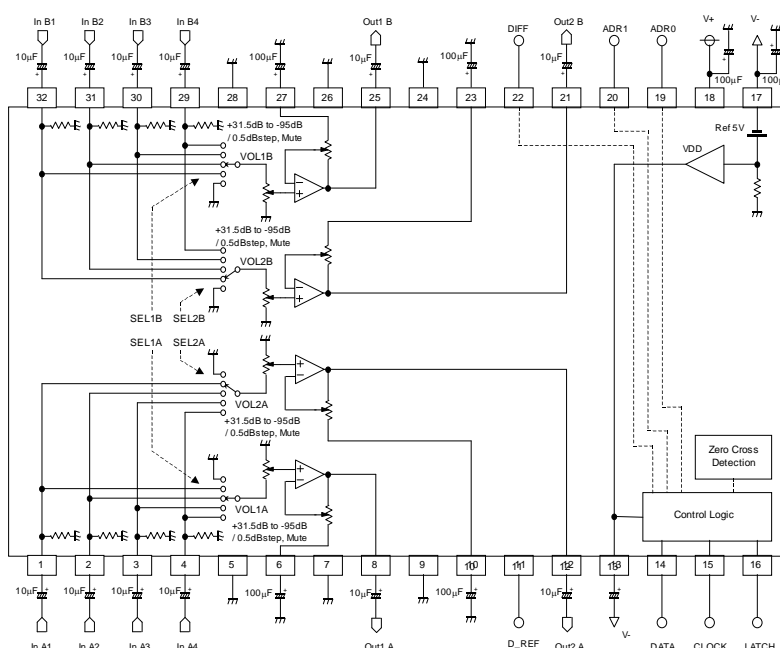

NJW1195AV

■ FEATURES

- Operating Voltage
 - Dual power supply : ± 3.5 to ± 7.5 V
 - Single power supply : $+7.0$ to $+15$ V
- 3-Wired Serial Control
- Selectable 4-Chip Address
- Low Output Noise
- Low Distortion
- 4in 2out Stereo Signal Selector
- Volume
 - +31.5 to -95dB / 0.5dB step, Mute
- Differential transmission select function
- Channel Separation
- Zero Cross Detection
- Bi-CMOS Technology
- Package Outline
 - 118dBV typ. ($1.26\mu\text{Vrms}$ typ.)
 - 0.0003% typ. at $V_{in}=1\text{Vrms}$ (Differential transmission)
 - 120dB typ.
 - SSOP32

■ TERMINAL DESCRIPTION

Terminal	SYMBOL	FUNCTION	EQUIVALENT CIRCUIT	VOLTAGE
11	D_REF	Digital block Reference Voltage		-
13	VDDOUT	Internal Digital Power Supply output		V-(sub) + 5V
14 15 16 19 20 22	DATA CLOCK LATCH ADR0 ADR1 DIFF	Control data signal input Clock signal input Latch signal input Chip address setting terminal 0 Chip address setting terminal 1 Differential transmission select terminal		
18	V+	Power Supply (+)		V+

APPLICATION CIRCUIT 1 (Dual power supply operation)

4-channel Electronic Volume with 4-input 2-output selector (DIFF : 22pin=Low)

Each selector, each volume become independent control at use by this application circuit 1 (DIFF : 22pin=Low) .

Note.1) The output terminals of this device are designed as a line driver. Use them by load resistances (RL) more than 2kΩ because output waveforms may be in an unstable condition.

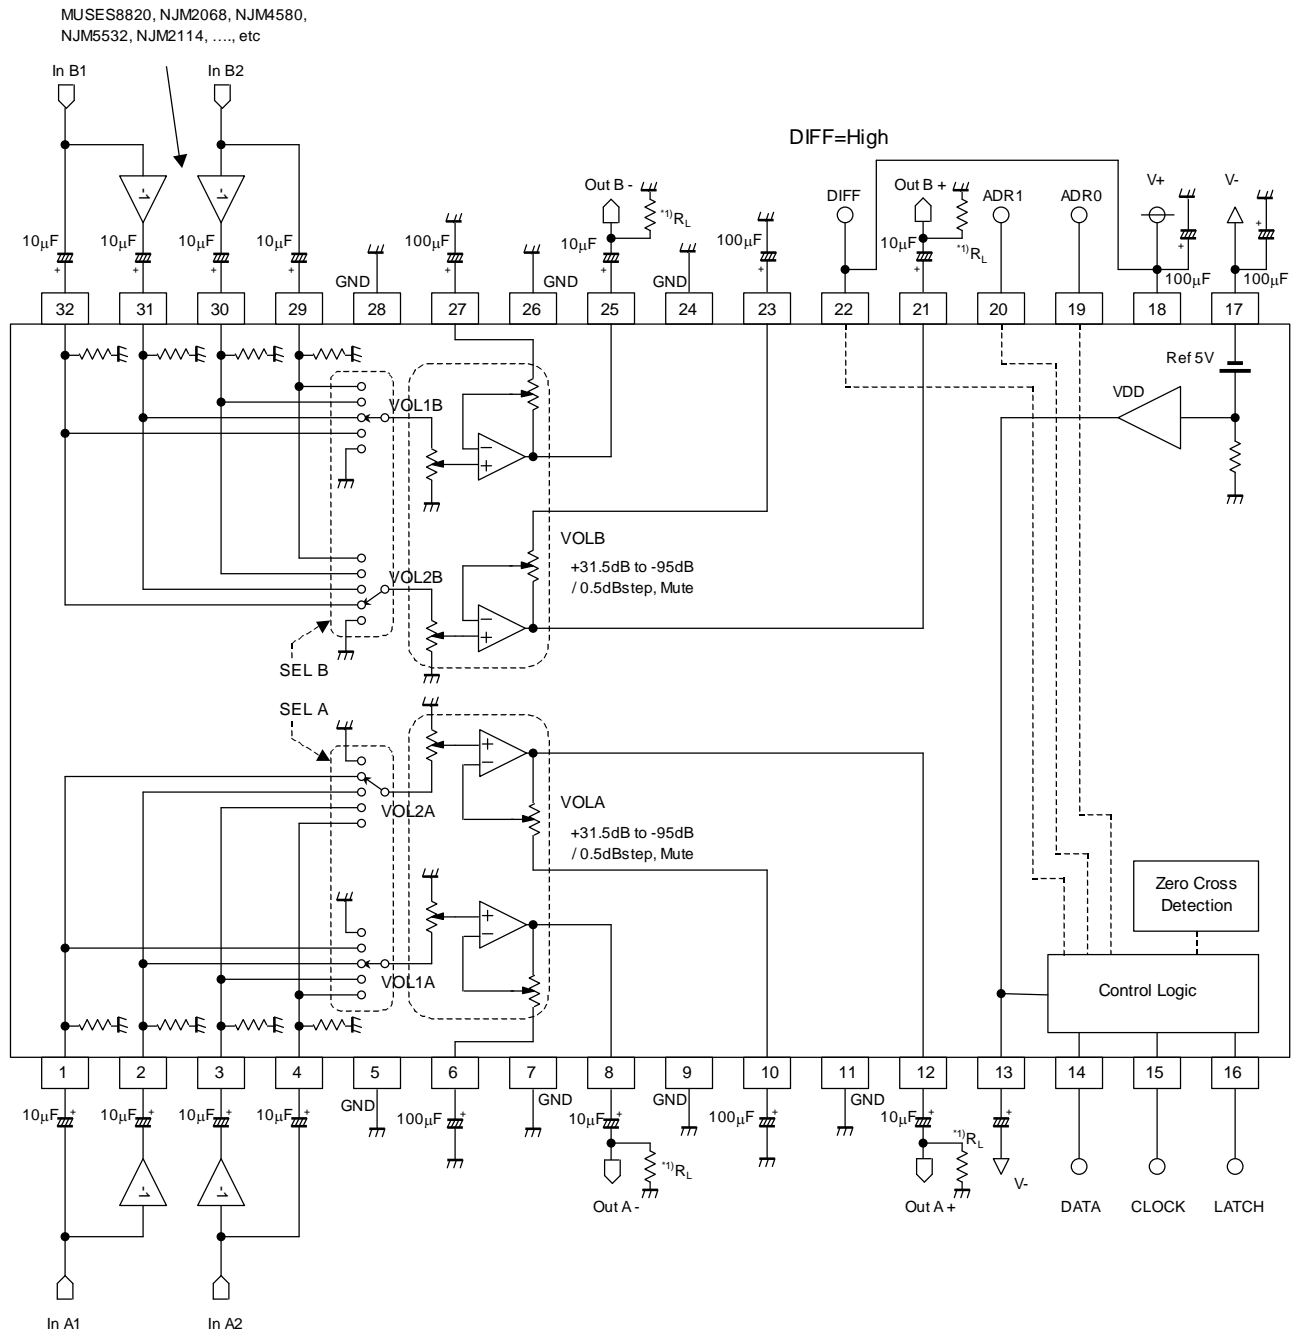

NJW1195A

APPLICATION CIRCUIT 2 (Dual power supply operation)

2-channel Differential Electronic Volume with 2-input 1-output selector (DIFF : 22pin=High)

VOL1 and VOL2 is operated together on this application circuit 2 (DIFF : 22pin=High).

In this case, Volume Control 1 becomes effective and does not accept Volume Control 2 about Control Data. Also, each selector becomes independent control.

Note.1) The output terminals of this device are designed as a line driver. Use them by load resistances (RL) more than 2kΩ because output waveforms may be in an unstable condition

■ APPLICATION CIRCUIT 3 (Single power supply operation)

4-channel Electronic Volume with 4-input 2-output selector (DIFF : 22pin=Low)

Each selector, each volume become independent control at use by this application circuit 1 (DIFF : 22pin=Low) .

Note.1) The output terminals of this device are designed as a line driver. Use them by load resistances (RL) more than 2kΩ because output waveforms may be in an unstable condition

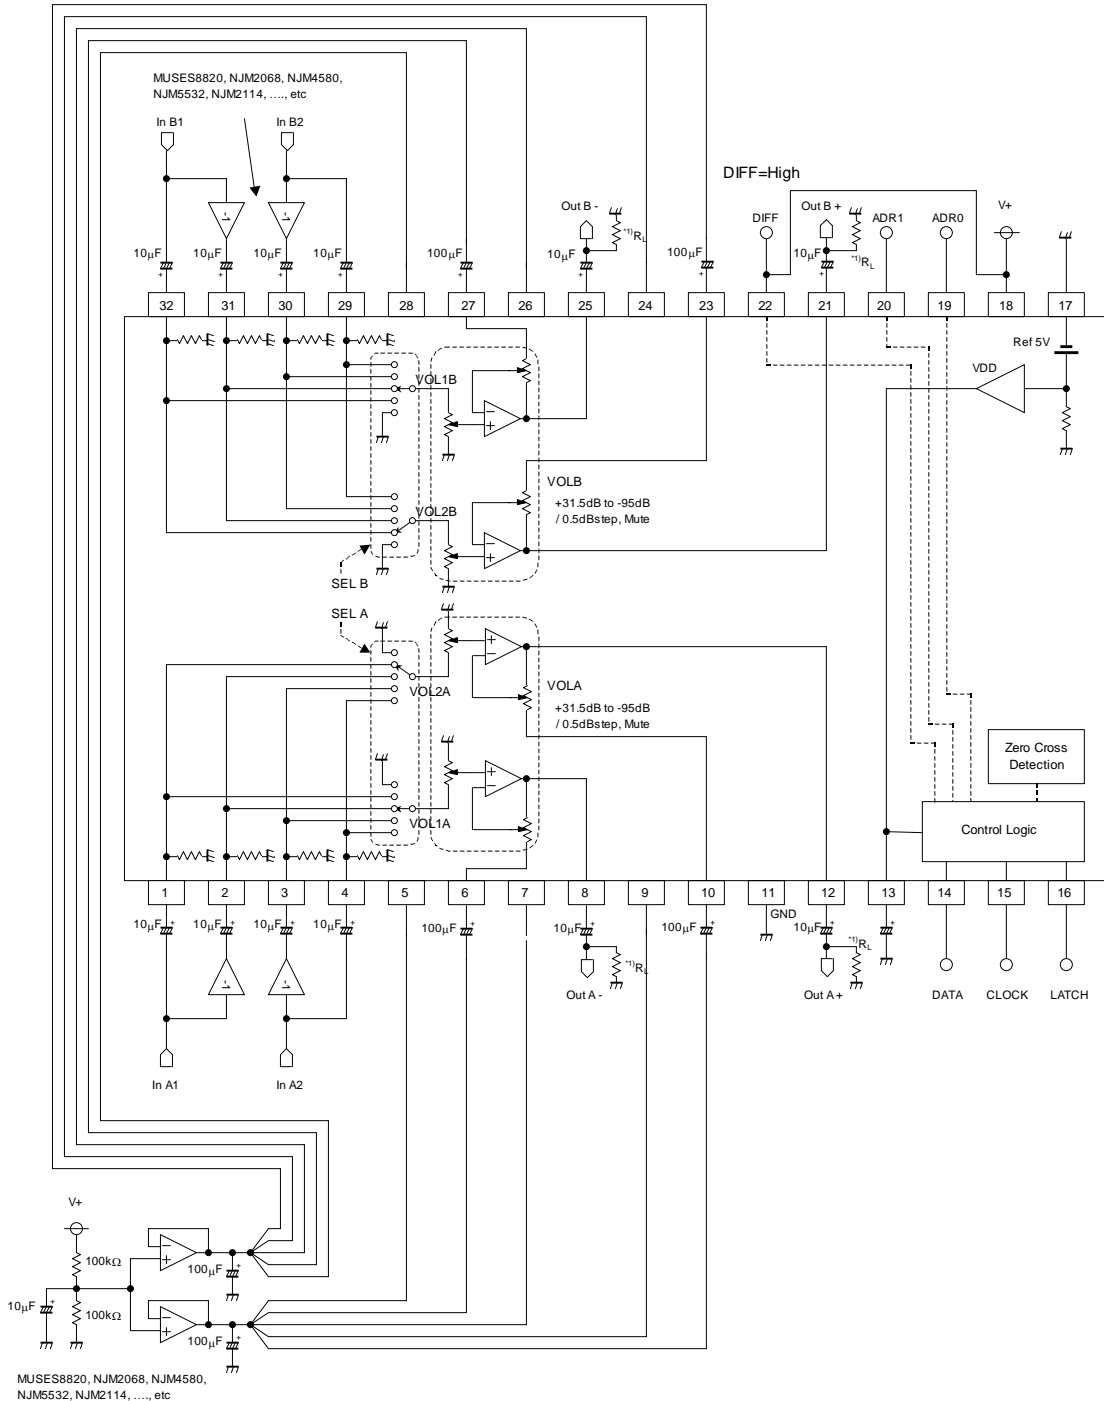

Note.2) Supply the reference voltage in A_REF/B_REF terminals externally in the single power supply operation. The reference voltages are recommended to be composed by one OpAmp per one channel because of keeping high channel separation. (One OpAmp is for A_REF terminal use, the other one is for B_REF terminal use.) It is effective because it prevents an oscillation of reference voltage OpAmp to use LPF such as this application

NJW1195A

APPLICATION CIRCUIT 4 (Single power supply operation)

2-channel Differential Electronic Volume with 2-input 1-output selector (DIFF : 22pin=High)

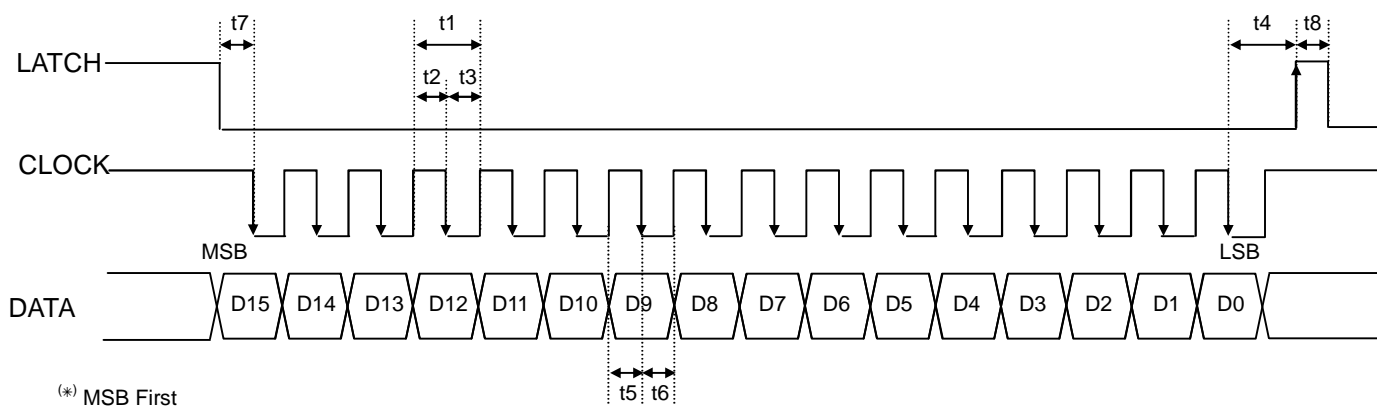

VOL1 and VOL2 is operated together on this application circuit 2 (DIFF : 22pin=High). In this case, Volume Control 1 becomes effective and does not accept Volume Control 2 about Control Data. Also, each selector becomes independent control.

Note.1) The output terminals of this device are designed as a line driver. Use them by load resistances (RL) more than 2kΩ because output waveforms may be in an unstable condition

Note.2) Supply the reference voltage in A_REF/B_REF terminals externally in the single power supply operation. The reference voltages are recommended to be composed by one OpAmp per one channel because of keeping high channel separation. (One OpAmp is for A_REF terminal use, the other one is for B_REF terminal use.) It is effective because it prevents an oscillation of reference voltage OpAmp to use LPF such as this application

■ CONTROL DATA FORMAT

Note.) Set CLOCK in High to prevent incorrect operation during a standby period.

SYMBOL	PARAMETER	MIN	TYP	MAX	UNIT
t1	CLOCK Clock Width	4	-	-	μsec
t2	CLOCK Pulse Width (High)	2	-	-	μsec
t3	CLOCK Pulse Width (Low)	2	-	-	μsec
t4	LATCH Rise Hold Time	4	-	-	μsec
t5	DATA Setup Time	1.6	-	-	μsec
t6	DATA Hold Time	1.6	-	-	μsec
t7	CLOCK Setup Time	1.6	-	-	μsec
t8	LATCH High Pulse Width	1.6	-	-	μsec

0	0	0	0	0	0	0	0	0	1	0	1	*	*	*	*

Note.) This product starts up by MUTE setting in power "ON". Use it after removing MUTE of each setting.

If any audio signal is inputted in input signal terminal before power "ON", it may cause initial condition abnormality.

In conditions of use such as the above, it prevents that abnormality by setting MUTE before power "OFF"

■ DEFINITION OF RESISTOR

◆Volume Control : +31.5dB to -95dB / 0.5dBstep.

(*)Initial Setting

NJW1195A

● Single transmission (DIFF : 22pin = Low)

Note) Setting-example on application circuit 1, 3

◆ **Input Selector**

: Selector for the single-end inputs from 1IN to 4IN

D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Input Selector 1A			Input Selector 2A			0	Don't Care	0	1	0	0	*	*	*	*
Input Selector 1B			Input Selector 2B			Don't Care	Don't Care	0	1	0	1	*	*	*	*

< Input Selector Data >

Data			Setting
D15	D14	D13	
D12	D11	D10	
0	0	0	Mute ^(*)
0	0	1	Input1
0	1	0	Input2
0	1	1	Input3
1	0	0	Input4

^(*)Initial Setting

Note) Input Impedance is reduced by half (TBDkΩ typ.) when input selector 1 (SEL1) and Input selector 2 (SEL2) chose the same input.

● Differential transmission (DIFF : 22pin = High)

Note) Setting-example on application circuit 2, 4

◆ **Input Selector**

: Selector for the differential inputs from 1IN to 2IN

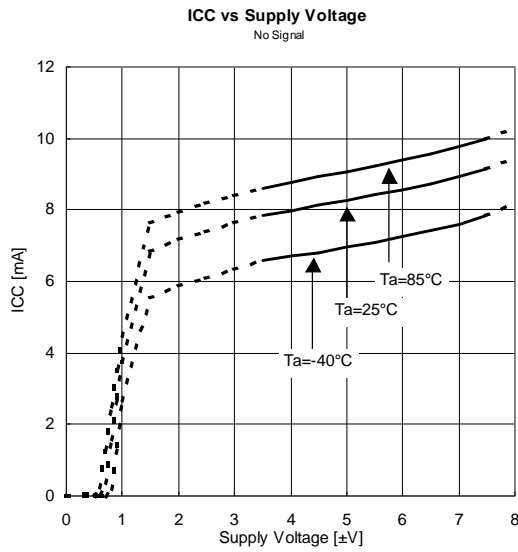

D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0

TYPICAL CHARACTERISTICS

TYPICAL CHARACTERISTICS

THD+N vs Input Voltage

V=z7V, VOL=0dB, Input=INA1, Output=OUTA1,
 BW:10Hz-22kHz (f=100Hz), 400Hz-30kHz (f=1kHz),
 400Hz-80kHz (f=10kHz), Ta=25°C

THD+N vs Input Voltage

V=z7V, f=1kHz, Vin=1Vrms, Input=INA1, Output=OUTA1
 BW:400Hz-30kHz, Ta=25°C

Channel Separation vs Frequency

V=z7V, Vin=2Vrms, VOL=0dB, Input=INB1,
 Output=OUTA1, BW=10Hz-80kHz, Ta=25°C

Cross Talk vs Frequency

V=z7V, Vin=2Vrms, VOL=0dB, Input=INA2-INA4,
 Output=OUTA1, Select Channel=Input1
 BW=10Hz-80kHz, Ta=25°C

[CAUTION]

The specifications on this databook are only given for information, without any guarantee as regards either mistakes or omissions. The application circuits in this databook are described only to show representative usages of the product and not intended for the guarantee or permission of any right including the industrial rights.
