INTRODUCTION

The Copyright to this document belongs to NLT Technologies, Ltd. (hereinafter called "NLT"). No part of this document will be used, reproduced or copied without prior written consent of NLT.

NLT does and will not assume any liability for infringement of patents, copyrights or other intellectual property rights of any third party arising out of or in connection with application of the products described herein except for that directly attributable to mechanisms and workmanship thereof. No license, express or implied, is granted under any patent, copyright or other intellectual property right of NLT.

Some electronic products would fail or malfunction at a certain rate. In spite of every effort to enhance reliability of products by NLT, the possibility of failures and malfunction might not be avoided entirely. To prevent the risks of damage to death, human bodily injury or other property arising out thereof or in connection therewith, each customer is required to take sufficient measures in its safety designs and plans including, but not limited to, redundant system, fire-containment and anti-failure.

The products are classified into three grades: "Standard", "Special", and "Specific".

Each quality grade is designed for applications described below. Any customer who intends to use a product for application other than that of Standard is required to contact an NLT sales representative in advance.

The **Standard:** Applications as any failure, malfunction or error of the products are free from any damage to death, human bodily injury or other property (Products Safety Issue) and not related the safety of the public (Social Issues), like general electric devices.

Examples: Office equipment, audio and visual equipment, communication equipment, test and measurement equipment, personal electronic equipment, home electronic appliances, car navigation system (with no vehicle control functions), seat entertainment monitor for vehicles and airplanes, fish finder (except marine radar integrated type), PDA, etc.

The **Special:** Applications as any failure, malfunction or error of the products might directly cause any damage to death, human bodily injury or other property (Products Safety Issue) and the safety of the public (Social Issues) and required high level reliability by conventional wisdom.

Examples: Vehicle/train/ship control system, traffic signals system, traffic information control system, air traffic control system, surgery/operation equipment monitor, disaster/crime prevention system, etc.

The **Specific:** Applications as any failure, malfunction or error of the products might severe cause any damage to death, human bodily injury or other property (Products Safety Issue) and the safety of the public (Social Issues) and developed, designed and manufactured in accordance with the standards or quality assurance program designated by the customer who requires extremely high level reliability and quality.

Examples: Aerospace system (except seat entertainment monitor), nuclear control system, life support system, etc.

The quality grade of this product is the "Standard" unless otherwise specified in this document.

1. OUTLINE

1.1 STRUCTURE AND PRINCIPLE

Color LCD module NL160120AC27-32B is composed of the amorphous silicon thin film transistor liquid crystal display (a-Si TFT LCD) panel structure with driver LSIs for driving the TFT (Thin Film Transistor) array and a backlight.

The a-Si TFT LCD panel structure is injected liquid crystal material into a narrow gap between the TFT array glass substrate and a color-filter glass substrate.

Grayscale data signals from a host system (e.g. signal generator, etc.) are modulated into best form for active matrix system by a signal processing board, and sent to the driver LSIs which drive the individual TFT arrays.

The TFT array as an electro-optical switch regulates the amount of transmitted light from the backlight assembly, when it is controlled by data signals. Color images are created by regulating the amount of transmitted light through the TFT array of red, green and blue dots.

1.2 APPLICATION

• Color monitor system

1.3 FEATURES

- Ultra-wide viewing angle (Ultra-Advanced Super Fine TFT (UA-SFT))
- High luminance
- High contrast
- High resolution
- Low reflection
- Wide color gamut
- 256 gray scale in each R, G, B sub-pixel (8-bit), 16,777,216 colors
- LVDS interface
- Selectable LVDS data input map
- Small foot print
- Long life LED backlight type with an LED driver board
- Compliant with the European RoHS directive (2011/65/EU)
- Acquisition product for UL60950-1/CSA C22.2 No.60950-1-03 (File number: E170632)

2. GENERAL SPECIFICATIONS

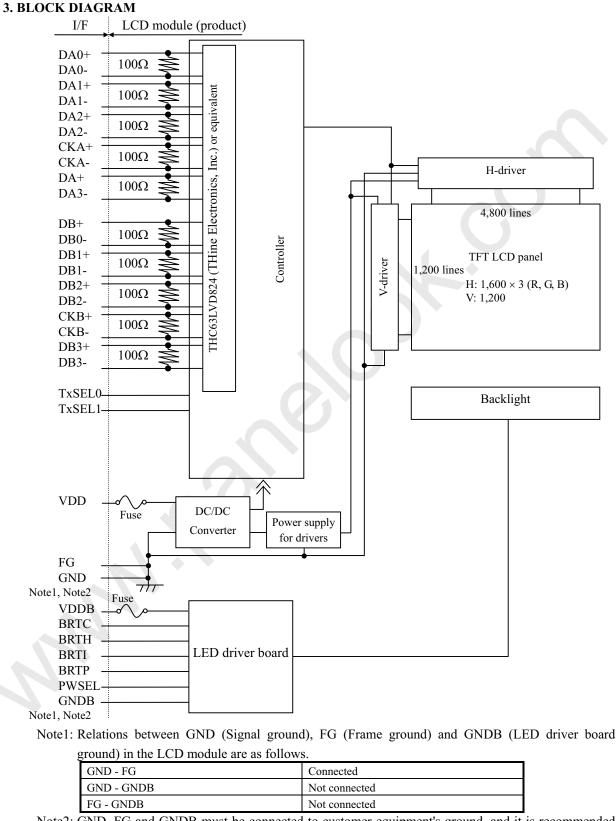

Display area	432.0 (H) × 324.0 (V) mm					
Diagonal size of display	54 cm (21.3 inches)					
Drive system	a-Si TFT active matrix					
Display color	16,777,216 colors					
Pixel	1,600 (H) × 1,200 (V) pixels (1 pixel consists of 3 sub-pixels (RGB).)					
Pixel arrangement	RGB (Red dot, Green dot, Blue dot) vertical stripe					
Dot pitch	0.090 (H) × 0.270 (V) mm					
Pixel pitch	0.270 (H) × 0.270 (V) mm					
Module size	457.0 (W) × 350.0 (H) × 21.5 (D) mm (typ.)					
Weight	2,700 g (typ.)					
Contrast ratio	1200:1 (typ.)					
Viewing angle	 At the contrast ratio ≥ 10:1 Horizontal: Right side 88° (typ.), Left side 88° (typ.) Vertical: Up side 88° (typ.), Down side 88° (typ.) 					
Designed viewing direction	Viewing angle with optimum grayscale ($\gamma \rightleftharpoons$ DICOM): Normal axis (perpendicular) Note1					
Polarizer surface	Antiglare					
Polarizer pencil-hardness	2H (min.) [by JIS K5600]					
Color gamut	At LCD panel center 72 % (typ.)[against NTSC color space]					
Response time	$\begin{array}{l} Ton+Toff (10\% \leftrightarrow 90\%) \\ 40 \text{ ms (typ.)} \end{array}$					
Luminance	At the maximum luminance control 760 cd/m ² (typ.)					
Signal system	2 ports LVDS interface (Characteristics of AC receiver THC63LVD824A THine Electronics, Inc. or equivalent) [RGB 8-bit signals, Data enable signal (DE), Dot clock (CLK)]					
Power supply voltage	LCD panel signal processing board: 12.0V LED driver board: 12.0V					
Backlight	LED backlight type with LED driver board					
	At checkered flag pattern, the maximum luminance control					

Note1: When the product luminance is 450cd/m^2 , the gamma characteristic is designed to $\gamma = \text{DICOM}$.

\Diamond

NLT Technologies, Ltd.

NL160120AC27-32B

Note2: GND, FG and GNDB must be connected to customer equipment's ground, and it is recommended that these grounds be connected together in customer equipment.

Note3: Each pair of the LVDS signal has a 100Ω terminating resistance between D+ and D-.

4.3.3 LED driver board current wave

At the maximum luminance control: 100% to at the minimum luminance control: 1%. \clubsuit Luminance control frequency: 270 Hz (typ.) \clubsuit

- Note1: Luminance control frequency indicate the input pulse frequency, when select the external pulse control. See "4.6.2 Detail of BRTP timing".
- Note2: The power supply lines (VDDB and GNDB) have large ripple voltage during luminance control. See "**4.3.4 Power supply voltage ripple** ".

There is the possibility that the ripple voltage produces acoustic noise and signal wave noise in audio circuit and so on. Put a capacitor $(5,000 \text{ to } 6,000 \mu\text{F})$ between the power supply lines (VDDB and GNDB) to reduce the noise, if the noise occurred in the circuit.

DATA SHEET DOD-PP-1480 (1st edition)

NLT Technologies, Ltd.

NL160120AC27-32B

4.3.4 Power supply voltage ripple

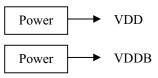

This product works, even if the ripple voltage levels are beyond the permissible values as following the table, but there might be noise on the display image.

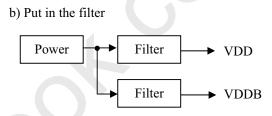

Power suppl	y voltage	Ripple voltage Note1 (Measure at input terminal of power supply)	Unit
VDD	12.0V	≤ 100	mVp-p
VDDB	12.0V	≤ 200	mVp-p

Note1: The permissible ripple voltage includes spike noise.

Note2: The load variation influence does not include.

Example of the power supply connection a) Separate the power supply

4.3.5 Fuse

		Fuse	Dating	Eucine automat	Remarks
Parameter	Туре	Supplier	Rating	Fusing current	Remarks
VDD	FCC16132AB	KAMAYA ELECTRIC Co., Ltd.	1.25A	2.5A, 5 seconds	
V DD	FCC10132AB		32V	maximum	Note1
	CCF1N10 TF16AT5.00T	KOA Corporation	10A	20 A, 1 seconds maximum	
VDDB			60V		
VDDB			5.0A	10 A, 5 seconds	-
			32V	maximum	-

Note1: The power supply capacity should be more than the fusing current. If it is less than the fusing current, the fuse may not blow in a short time, and then nasty smell, smoke and so on may occur.

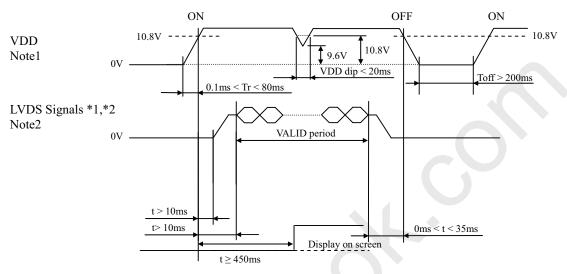

\oslash

NLT Technologies, Ltd.

NL160120AC27-32B

4.4 POWER SUPPLY VOLTAGE SEQUENCE

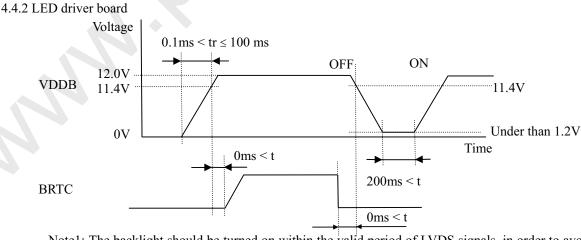

4.4.1 LCD panel signal processing board

- *1: DA0+/-, DA1+/-, DA2+/-, DA3+/-, CKA+/-, DB0+/-, DB1+/-, DB2+/-, DB3+/- and CKB+/-
- *2: LVDS signals should be measured at the terminal of 100Ω resistance.
- Note1: If there is a voltage variation (voltage drop) at the rising edge of VDD below 10.8V, there is a possibility that a product does not work due to a protection circuit.
- Note2: LVDS signals must be set to Low or High-impedance, except the VALID period (See above sequence diagram), in order to avoid the circuitry damage.If some of signals are cut while this product is working, even if the signal input to it once again, it might not work normally. If a customer stops the display and function signals, VDD also must

☆

be shut down. Note3: The backlight should be turned on within the valid period of LVDS signals, in order to avoid unstable data display.

- Note1: The backlight should be turned on within the valid period of LVDS signals, in order to avoid unstable data display.
- Note2: If tr is more than 100 ms, the backlight will be turned off by a protection circuit for LED driver board.

Note3: When VDDB is 0V or BRTC is Low, PWSEL must be set to Low or Open.

NLT Technologies, Ltd.

NL160120AC27-32B

4.6 LUMINANCE CONTROL

4.6.1 Luminance control methods

Method	Adjustment and luminance ratio	PWSEL terminal	BRTP terminal
Variable resistor control Note1	 Adjustment Adjustment The variable resistor (R) for luminance control should be 10kΩ ±5%, 1/10W. Minimum point of the resistance is the minimum luminance and maximum point of the resistance is the maximum luminance. The resistor (R) must be connected between BRTH-BRTI terminals. BRTH Luminance ratio Note3 Resistance Luminance ratio 0 Ω 0% (Min. Luminance) 10 kΩ 	High or Open	Open
Voltage control Note1	Adjustment Voltage control method works, when BRTH terminal is 0V and VBI voltage is input between BRTI-BRTH terminals. This control method can carry out continuation adjustment of luminance. Luminance is the maximum when BRTI terminal is Open. Luminance ratio Note3 BRTI Voltage (VBI) Luminance ratio 0V 0% (Min. Luminance) 1.0V 100% (Max. Luminance)		
Pulse width modulation Note1 Note2 Note4	Adjustment Pulse width modulation (PWM) method works, when PWSEL terminal is Low and PWM signal (BRTP signal) is input into BRTP terminal. The luminance is controlled by duty ratio of BRTP signal. Luminance ratio Note3 Duty ratio Luminance ratio 0.01 1% (Min. Luminance) (At frequency: 325 Hz) 1.0 100% (Max. Luminance)	Low	BRTP signal

☆

Note1: In case of the variable resistor control method and the voltage control method, noises may appear on the display image depending on the input signals timing for LCD panel signal processing board.

Use PWM method, if interference noises appear on the display image!

- Note2: The LED driver board will stop working, if the Low period of BRTP signal is more than 50ms while BRTC signal is High or Open. Then the backlight will not turn on anymore, even if BRTP signal is input again. This is not out of order. The LED driver board will start to work when power is supplied again.
- Note3: These data are the target values.

Note4: See "4.6.2 Detail of BRTP timing".

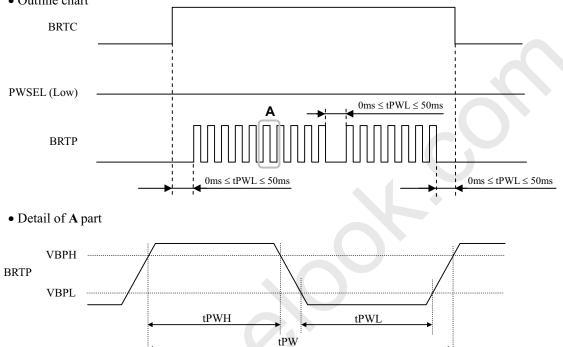

DATA SHEET DOD-PP-1480 (1st edition)

 - (1) Timing diagrams
 - Outline chart

(2) Each parameter

Parameter	Symbol	min.	typ.	max.	Unit	Remarks
Luminance control frequency	FL	185	-	1,000	Hz	Note1, Note2
External PWM pulse width	tPWH	30	-	-	μs	Note1, Note3

Note1: Definition of parameters is as follows.

$$FL = \frac{1}{tPW} DL = \frac{tPWH}{tPW}$$

Note2: See the following formula for luminance control frequency.

- Luminance control frequency = $1/tv \times (n+0.25)$
 - $n = 1, 2, 3 \cdot \cdot \cdot \cdot$

tv: Vertical cycle (See "4.9.1 Timing characteristics".)

The interference noise of luminance control frequency and input signal frequency for LCD panel signal processing board may appear on a display. Set up luminance control frequency so that the interference noise does not appear!

Note3: See "4.6.1 Luminance control methods".

- Note2: Twist pair wires with 100Ω (Characteristic impedance) should be used between LCD panel signal processing board and LVDS transmitter.
- Note3: Input signal RSVD is not used inside the product, but do not keep pin open to avoid noise problem.

4.8 DISPLAY COLORS AND INPUT DATA SIGNALS

This product can display in equivalent to 16,777,216 colors in 256 gray scales in each RGB sub-pixel. Also the relation between display colors and input data signals is as the following table.

										Data s	ignal	(0: I	Low l	evel,	1: H	igh le	evel)						/ 		
Displa	ay colors	RA7	RA6	RA5	RA4	RA3	RA2	RA1	RA0	GA7	GA6	GA5	GA4	GA3	GA2	GA1	GA0	BA7	7 BA6	BA5	BA4	BA3	BA2	BA1	BA0

Note1: These are initial characteristics.

Note2: Measurement conditions are as follows.

Ta = 25°C, VDD = 12.0V, VDDB = 12.0V, PWM: Duty 100%, Display mode: UXGA, Horizontal cycle = 1/75.19 kHz, Vertical cycle = 1/60.0Hz

Optical characteristics are measured after 20 minutes from working the product, in the dark room. Also measurement methods are as follows.

Note3: Product surface temperature at the maximum luminance control: TopF = 32° C Note4: Product surface temperature at 450cd/m² luminance control: TopF = 30° C Temperature difference in display area: $\Delta 10^{\circ}$ C

NLT Technologies, Ltd.

NL160120AC27-32B

Note5: See **"4.14.2 Definition of contrast ratio**". Note6: See **"4.14.3 Definition of luminance uniformity**". Note7: These coordinates are found on CIE 1931 chromaticity diagram. Note8: See **"4.14.4 Definition of response times**".

Note9: See "4.14.5 Definition of viewing angles".

4.14.2 Definition of contrast ratio

The contrast ratio is calculated by using the following formula. Contrast ratio (CR) = $\frac{\text{Luminance of white screen}}{\text{Luminance of black screen}}$

4.14.3 Definition of luminance uniformity

The luminance uniformity is calculated by using following formula. Luminance uniformity (LU) = $\frac{\text{Minimum luminance from (1) to (5)}}{\text{Maximum luminance from (1) to (5)}}$

The luminance is measured at near the 9 points shown below.

	160	800	1,440
120	1	2	3
600	4	5	6
1,080	7	•8	

NLT Technologies, Ltd.

4.14.4 Definition of response times

Response time is measured at the time when the luminance changes from "black" to "white", or "white" to "black" on the same screen point, by photo-detector. Ton is the time when the luminance changes from 10% up to 90%. Also Toff is the time when the luminance changes from 90% down to 10% (See the following diagram.).

Product surface temperature at the maximum luminance control: $TopF = 35^{\circ}C$

The luminance lifetime is the time from initial luminance to half-luminance.

This lifetime is the estimated value, and is not guarantee value.

LED elementary substance 25°C (Ambient temperature of the product) Continuous operation, PWM: Duty 100% 70,000 60°C (Temperature of the product front or rear panel) 60,000		Condition	Estimated luminance lifetime (Life time expectancy) Note1, Note2, Note3	Unit
60°C (1emperature of the product front or rear panel) 60,000			70,000	
Continuous operation, PWM: Duty 100%	LED elementary substance		60,000	h

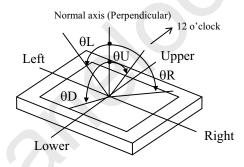

Note1: Life time expectancy is mean time to half-luminance.

Note2: Estimated luminance lifetime is not the value for an LCD module but the value for LED elementary substance.

Note3: By ambient temperature, the lifetime changes particularly. Especially, in case the product works under high temperature environment, the lifetime becomes short.

7. PRECAUTIONS

7.1 MEANING OF CAUTION SIGNS

The following caution signs have very important meaning. Be sure to read "7.2 CAUTIONS" and "7.3 ATTENTIONS"!

This sign has the meaning that a customer will be injured or the product will sustain damage if the customer practices wrong operations.

This sign has the meaning that a customer will be injured if the customer practices wrong operations.

7.2 CAUTIONS

* Do not shock and press the LCD panel and the backlight! There is a danger of breaking, because they are made of glass. (Shock: Equal to or no greater than 294m/s² and equal to or no greater than 11ms, Pressure: Equal to or no greater than 19.6N (φ16mm jig))

7.3 ATTENTIONS

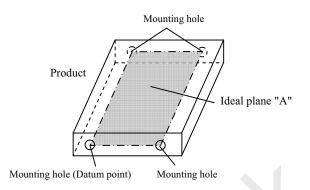

7.3.1 Handling of the product

- ① Take hold of both ends without touching the circuit board when the product (LCD module) is picked up from inner packing box to avoid broken down or misadjustment, because of stress to mounting parts on the circuit board.
- ② Do not hook nor pull cables such as lamp cable, and so on, in order to avoid any damage.
- ③ When the product is put on the table temporarily, display surface must be placed downward.
- ④ When handling the product, take the measures of electrostatic discharge with such as earth band, ionic shower and so on, because the product may be damaged by electrostatic.
- ⑤ The torque for product mounting screws must never exceed 0.735N⋅m. Higher torque might result in distortion of the bezel. And the length of product mounting screws must be ≤ 5.0mm.

NLT Technologies, Ltd.

NL160120AC27-32B

(6) The product must be installed using mounting holes without undue stress such as bends or twist (See outline drawings). And do not add undue stress to any portion (such as bezel flat area). Bends or twist described above and undue stress to any portion may cause display mura. Recommended installing method: Ideal plane "A" is defined by one mounting hole (datum point) and other mounting holes. The ideal plane "A" should be the same plane within ±0.3 mm.

- ⑦ Do not press or rub on the sensitive product surface. When cleaning the product surface, wipe it with a soft dry cloth.
- ③ Do not push or pull the interface connectors while the product is working.
- When handling the product, use of an original protection sheet on the product surface (polarizer) is
 recommended for protection of product surface. Adhesive type protection sheet may change color
 or characteristics of the polarizer.
- ① Usually liquid crystals don't leak through the breakage of glasses because of the surface tension of thin layer and the construction of LCD panel. But, if you contact with liquid crystal by any chance, please wash it away with soap and water.

7.3.2 Environment

- ① Do not operate or store in high temperature, high humidity, dewdrop atmosphere or corrosive gases. Keep the product in packing box with antistatic pouch in room temperature to avoid dusts and sunlight, when storing the product.
- ② In order to prevent dew condensation occurred by temperature difference, the product packing box must be opened after enough time being left under the environment of an unpacking room. Evaluate the storage time sufficiently because dew condensation is affected by the environmental temperature and humidity. (Recommended leaving time: 6 hours or more with the original packing state after a customer receives the package)
- ③ Do not operate in high magnetic field. If not, circuit boards may be broken.
- ④ This product is not designed as radiation hardened.

\Diamond

NLT Technologies, Ltd.

NL160120AC27-32B

7.3.3 Characteristics

The following items are neither defects nor failures.

- ① Response time, luminance and color may be changed by ambient temperature.
- ② Display mura, flickering, vertical streams or tiny spots may be observed depending on display patterns.
- ③ Do not display the fixed pattern for a long time because it may cause image sticking. Use a screen saver, if the fixed pattern is displayed on the screen.
- ④ The display color may be changed depending on viewing angle because of the use of condenser sheet in the backlight.
- ⑤ Optical characteristics may be changed depending on input signal timings.

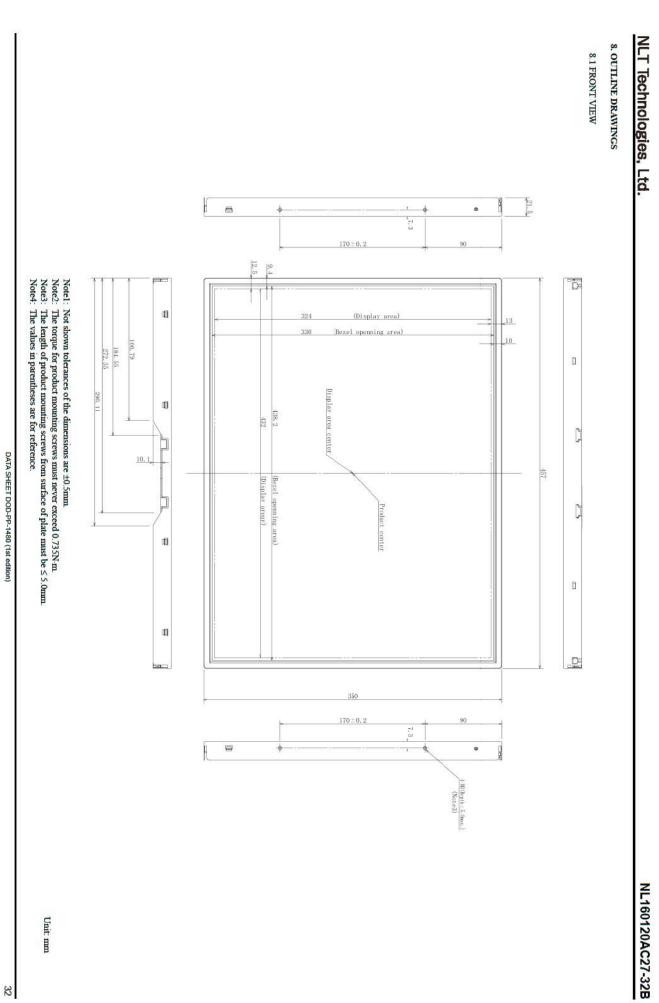

7.3.4 Others

- ① All GND, GNDB, VDD and VDDB terminals should be used without any non-connected lines.
- ② Do not disassemble a product or adjust variable resistors.
- ③ Pack the product with the original shipping package, in order to avoid any damages during transportation, when returning the product to NLT for repairing and so on.
- (4) The LCD module by itself or integrated into end product should be packed and transported with display in the vertical position. Otherwise the display characteristics may be degraded.
- ⑤ The information of China RoHS directive six hazardous substances or elements in this product is as follows.

	China l	RoHS directiv	ve six 1 hazardous s	substances or elements	
	cury C Ig)	admium (Cd)	Hexavalent Chromium (Cr VI)	Polybrominated Biphenys (PBB)	Polybrominated Biphenyl Ethers (PBDE)
×	C	0	0	0	0

Note1: O: This indicates that the poisonous or harmful material in all the homogeneous materials for this part is equal or below the limitation level of SJ/T11363-2006 standard regulation.

× : This indicates that the poisonous or harmful material in all the homogeneous materials for this part is above the limitation level of SJ/T11363-2006 standard regulation.
