# **NL3V8T244, NL3V8T240**

The NL3V8T244 / NL3V8T240 are 8-bit configurable dual-supply level translators with 3-state outputs. The A- and B- ports are designed to track two different power supply rails,  $V_{\rm CCA}$  and  $V_{\rm CCB}$  respectively. Both supply rails are configurable from 0.9 V to 3.6 V allowing universal voltage level translation between the A- to B-ports.

The NL3V8T244 is an 8-bit level translator that allows non-inverting translations from A to B ports. The NL3V8T240 is an 8-bit level translator that allows inverting translations from A to B ports.

The output enable pin  $(\overline{OE})$ , when High, disables all the output ports by putting them in 3-state. The  $\overline{OE}$  pin is designed to track  $V_{CCA}$ .
