Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

3. Measured by the voltage drop between A and B pins at the indicated current through the switch. On Resistance is determined by the lower of the voltages on the two (A or B Ports).

4. Parameter is characterized but not tested in production.

5. $\Delta R_{ON} = R_{ONmax} - R_{ONmin}$ measured at identical V_{EE} , temperature and voltage levels.

6. Flatness is defined as the difference between the maximum and minimum value of ON Resistance over the specified range of conditions.
