USB Clamps, RS232 and General Purpose Data Line Filters with ESD Protection; Optional Internal Switch

USB line clamps (DOUT+, DOUT-) protect low operating voltage loads. Five additional low pass filters are built in to reject RF noise and EMI on RS232 and GP data lines. When the USB lines are used, a switch is utilized to open the RS232 lines in order to reduce the loading on the USB lines. There are two options available for this device. NMFAAAA-1 has the switch external, and NMFAAAA-2 integrates the switch on chip. Also, when the switch is integrated, the USB line resistors are integrated as well.

Features

- ESD Protection IEC 61000-4-2 Level 4 (Input Lines)
- ESD Protection IEC 61000-4-2 Level 1 (All I/O)
- RF Filtering (800 MHz-4.0 GHz): -30 dB Low Pass Filter (RS232 and General Purpose Data Lines)
- Input Voltage up to 5.25 V (USB Lines) and 6.0 V (RS232 and General Purpose Data Lines)
- Max Output Voltage: TBD by Customer (RS232 and GP Data Lines) and TBD by Customer (USB Lines)
- USB Minimum Input Signal Level: -1.0 V
- USB Line Capable of Withstanding Exposure to Burst (60 ns at 4.6 V)
- Optional Integrated Switch to Open the RS232 Lines (NMFAAAA-2)
- 25 Bump Flip-Chip Direct Chip Attach: 2.5 mm x 2.5 mm x 0.65 mm
- This is a Pb-Free Device

Typical Application

- Cellular Phones
- Portable Equipment

MAXIMUM RATINGS (T_A = 25°C)

Rating	Symbol	Max	Unit
ESD Discharge IEC61000-4-2 Air Discharge ESD Discharge IEC61000-4-2 Contact Discharge Machine Model	V _{PP}	15 15 0.2	kV
Junction Temperature	T _J	150	°C
Operating Temperature Range	T _{OP}	-40 to +85	°C
Storage Temperature Range	T _{stg}	-55 to +150	°C

Maximum ratings are those values beyond which device damage can occur. Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and are not valid simultaneously. If these limits are exceeded, device functional operation is not implied, damage may occur and reliability may be affected.

3. Figure 3 depicts the waveform of the open circuit voltage of the source.
4. Excluding the first transition from idle state.

The signal produced by the voltage generator may be distorted when observed at the data pin due to input protection devices possibly incorporated in the USB device.
