DESCRIPTION

This is a family of 4,194,304 x 4 bit Extended Data Out CMOS DRAMs. Extended Data Out Mode offers high speed random access of memory cells within the same row, so called Hyper Page Mode. Power supply voltage (+5.0V), refresh cycle (2K Ref), access time (-5 or -6), power consumption (Normal or Low power) and package type (SOJ) are optional features of this family.

All of this family have $\overline{\text{CAS}}$ -before- $\overline{\text{RAS}}$ refresh, $\overline{\text{RAS}}$ -only refresh and Hidden refresh capabilities. Furthermore, Self-refresh operation is available in L-version. This 4Mx4 EDO Mode DRAM family is fabricated using NANYA's advanced CMOS process to realize high bandwidth, low power consumption and high reliability.

It may be used as main memory unit for microcomputer, high level computer and personal computer .

NOTES

1. An initial pause of 200us is required after power-up followed by any 8 $\overline{\text{RAS}}$ -only refresh or $\overline{\text{CAS}}$ -before- $\overline{\text{RAS}}$ refresh Cycles before proper device operation is achieved.
2. VIH(min) and VIL(max) are reference levels for measuring timing of input signals. Transition times are measured between VIH(min) and VIL(max) and are assumed to be 2ns for all inputs.
3. Measured with a load equivalent to 2 TTL(5V)/1 TTL(3.3V) loads and 100pF.
4. Operation within the tRCD(max) limit insures that tRAC(max) can be met. tRCD(max) is specified as a reference point only. If tRCD is greater than the specified tRCD (max) limit, then access time is controlled exclusively by tCAC.
5. Assumes that tRCD \geq tRCD(max).
6. This parameter defines the time at which the output achieves the open circuit condition and is not referenced to VOH or VOL.
7. tWCS, tRWD, tCWD and tAWD are non restrictive operating parameters. They are included in the data sheet as electrical characteristics only. If tWCS \geq tWCS(min), the cycle is an early write cycle and the data output will remain high impedance for the duration of the cycle. If tCWD \geq tCWD(min), tRWD \geq tRWD(min) and tAWD \geq tAWD(min), then the cycle is a read-modify-write cycle and the data output will contain the data read from the selected address. If neither of the above conditions is satisfied, the condition of the data out is indeterminate. Either tRCH or tRRH must be satisfied for a read cycle.
8. These parameters are referenced to $\overline{\text{CAS}}$ falling edge in early write cycles and to $\overline{\text{W}}$ falling edge in $\overline{\text{OE}}$ controlled Write Cycle and read-modify-write cycles.
9. Operation within the tRAD (max) limit insures that tRAD(max) can be met. tRAD(max) is specified as a reference point only. If tRAD is greater than the specified tRAD(max) limit, then access time is controlled by tAA .
10. These specifications are applied in the test mode.
11. In test mode read cycle, the value of tRAC, tAA, tCAC is delayed by 2ns to 5ns for the specified values. These Parameters should specified in test mode cycles by adding the above value to the specified value in this data sheet.
12. tASC \geq 6ns, Assume t τ = 2.0ns
13. If $\overline{\text{RAS}}$ goes high before $\overline{\text{CAS}}$ high going, the open circuit condition of the output is achieved by $\overline{\text{CAS}}$ high going.
If $\overline{\text{CAS}}$ goes high before $\overline{\text{RAS}}$ high going, the open circuit condition of the output is achieved by $\overline{\text{RAS}}$ high going.
14. If tRASS \geq 100us, then $\overline{\text{RAS}}$ precharge time must use tRPS instead of tRP.
15. For RAS-only refresh and burst $\overline{\text{CAS}}$ -before- $\overline{\text{RAS}}$ refresh mode, 2048(2K) cycles of burst refresh must be executed within 32ms before and after self refresh, in order to meet refresh specification..
16. For distributed $\overline{\text{CAS}}$ -before- $\overline{\text{RAS}}$ with 15.6us interval $\overline{\text{CAS}}$ -before- $\overline{\text{RAS}}$ refresh should be executed with in 15.6us immediately before and after self refresh in order to meet refresh specification.
