RoHS 2002/95/EC

NTE30123
Super Bright LED Indicator
Super Purple, 8mm

Features:
- Low Power Consumption
- High Efficiency
- Versatile Mounting on P.C. Board or Panel
- Low Current Requirement
- Reliable and Robust

Applications:
- TV Sets
- Monitor
- Telephone
- Computer
- Circuit Board

Absolute Maximum Ratings: (T_A = +25°C unless otherwise specified)

Power Dissipation, P_D 120mW
Peak Forward Current (1/10th Duty Cycle, 0.1ms Pulse Width), I_{FM} 100mA
Continuous Forward Current, I_F 20mA
Reverse Voltage, V_R 5V
Operating Temperature Range, T_{opr} . . . . . −35° to +85°C
Storage Temperature Range, T_{stg} . . . . . −40° to +100°C
Lead Temperature (During Soldering, 3mm from Body, 5sec Max), T_L . . . . . +260°C

Electrical Optical Characteristics: (T_A = +25°C unless otherwise specified)

Parameter	Symbol	Test Conditions	Min	Typ	Max	Unit
Luminous Intensity	I_V	I_F = 20mA	150	190	–	mcd
View Angle of Half Power	2 $\theta_{1/2}$	I_F = 20mA	–	25	–	deg
Peak Emission Wavelength	λ_P	I_F = 20mA	–	400	–	nm
Dominant Emission Wavelength	λ_d	I_F = 20mA	–	–	–	nm
Full Width at Half Max	$\Delta\lambda$	I_F = 20mA	–	13.3	–	nm
Forward Voltage	V_F	I_F = 20mA	3.2	3.3	4.0	V
Reverse Current	I_R	V_R = 5V	–	–	10	μA

Note 1. Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye−response curve.
Note 2. $\theta_{1/2}$ is the off−axis angle at which the luminous intensity is half the axial luminous intensity.
Note 3. The dominant wavelength (λ_d) is derived from the CIE chromaticity diagram and represents the single wavelenght, which defines the color of the device.
