

Infra-Red CAR-KEY Transmitter

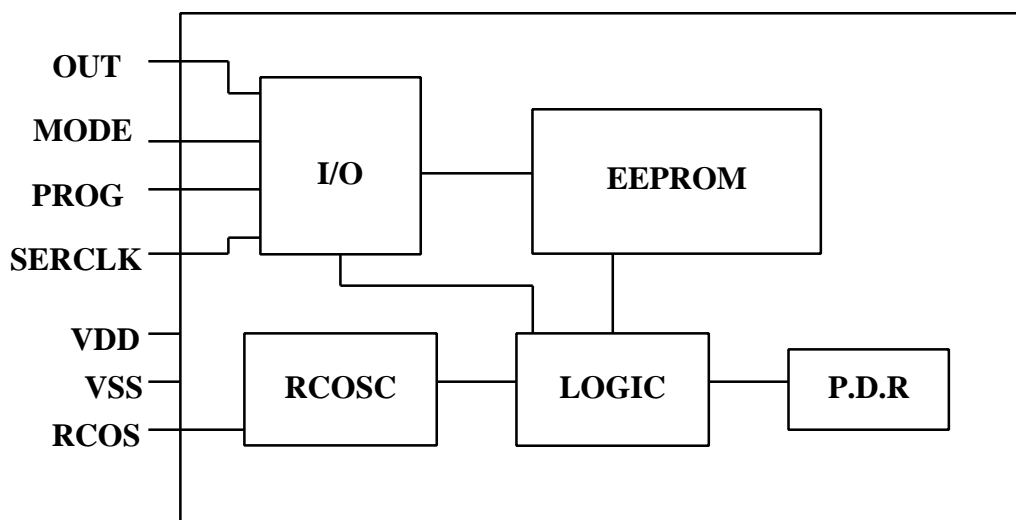

OM1058 in case SO-8

1. DESCRIPTION AND APPLICATION

This device is intended to be used in an infra-red remote-control car-key to transmit, when a button is pushed, an individual code to a receiver in the car to alternately open and lock the doors. The code is stored in a 24-bit EEPROM which is programmed by the equipment manufacturer. An input selects between a single or a repetitive transmission. It uses a fixed frequency to code the data.

This device is identical to an OM1058.
