REED SWITCH

ORD211

General Purpose Ultraminiature (Low-level Load 24 V Max.)

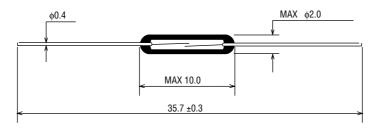

GENERAL DESCRIPTION

The ORD211 is a small single-contact reed switch designed for general control of low-level loads less than 24 $\,\mathrm{V}$. The contacts are sealed within the glass tube with inert gas to maintain contact reliability.

Features

- (1) Reed contacts are hermetically sealed within a glass tube with inert gas and do not receive any influence from the external atmospheric environment.
- (2) Quick response
- (3) The structure comprises an operating system and electrical circuits coaxially. Reed switches are suited to applications in radio frequency.
- (4) Reed switches are compact and light weight.
- (5) Superior corrosion resistance and wear resistance of the contacts assures stable switching operation and long life.
- (6) With a permanent magnet installed, reed switches economically and easily become proximity switches.

External Dimensions (Unit:mm)

APPLICATIONS OF REED SWITCHES

- 1. Automotive electronic devices
- 2. Control equipment
- 3. Communication equipment
- 4. Measurement equipment
- 5. Household appliances
