

HIGH VOLTAGE RECTIFIER STACKS

Ranges of high voltage rectifier assemblies, incorporating controlled avalanche diodes mounted on fire proof triangular formers. They are supplied with **M6 studs**.

The OSB9410series is intended for application in two phase half wave rectifier circuits. The OSM9410series is intended for application in single phase or three phase bridges or in voltage doubler circuits.

The OSS9410series is intended for all kinds of high voltage rectification.

The OSB9410series and OSM9410series are supplied with a centre tap (8-32UNC). The maximum crest working voltages of the OSB9410 and OSM9410series cover the range from 2 kV to 15 kV, and of the OSS9410series the range from 3 kV to 30 kV, in 1 kV steps.

NOTES

1. The Ratings and Characteristics given apply from centre tap to end. (Not for OSS9410series).
2. Type number suffix
 The suffix consists of a figure indicating the total number of diodes, followed by a letter indicating the base.
 A = M6 studs at the ends.
3. Operating position
 The rectifier units can be operated at their maximum ratings when mounted in any position.

¹⁾ The breakdown voltage increases, by approximately 0.1% per °C with increasing junction temperature.

The drawing shows the OSS9410series.

The OSB9410 and OSM9410series differ in the following respects:

OSB9410 series - has a centre tap marked +; anode and cathode terminals are both marked ~.

OSM9410series - has a centre tap marked ~.
