THERMOPILE INFRARED SENSOR

Features

The thermopile sensor consists of a series of 44 thermoelements, forming a sensitive area of $0.5*0.5~\text{mm}^2$. The sensor is hermetically sealed into a TO-5 metal housing, with an optical filter. This standard filter allows measurements to be made in the spectral range above 5 µm wavelength. The thermosensor exhibits an almost white noise, comparable to an ohmic resistance. It has a constant signal versus frequency up to its frequency limit, and is directly proportional to incident radiation.

Applications

- * Ear thermometers: clinic thermometers
- * Infrared thermometers
- * Consumer applications: hair dryer, micro-wave oven, air conditioner, refrigerator
- * Continuous temperature control of manufacturing
- * Security system
- * Radiation monitor switch system
- * Absorbing measurement for gas analysis
- Thermoelectric converter
- * Heat flux flowmeter
