

## PXXX0LB

### Description

- Thyristor solid state protection thyristor protect telecommunications equipment such as modems, line cards, fax machines, and other CPE.
- P Series devices are used to enable equipment to meet various regulatory requirements including GR 1089, ITU K.20, K.21 and K.45, IEC 60950, and TIA-968 (formerly known as FCC Part 68)..

Compared to surge suppression using other technologies, P Series devices offer absolute surge protection regardless of the surge current available and the rate of applied voltage (dv/dt). P Series devices:

- Cannot be damaged by voltage
- Eliminate hysteresis and heat dissipation typically found with clamping devices
- Eliminate voltage overshoot caused by fast-rising transients
- Are non-degenerative
- Will not fatigue
- Have low capacitance, making them ideal for high-speed transmission equipment

### Electrical Parameters

Parameter	Definition
$C_o$	Off-state Capacitance — typical capacitance measured in off state
$d_i/d_t$	Rate of Rise of Current — maximum rated value of the acceptable rate of rise in current over time
$I_s$	Switching Current — maximum current required to switch to on state
$I_{DRM}$	Leakage Current — maximum peak off-state current measured at $V_{DRM}$
$I_H$	Holding Current — minimum current required to maintain on state
$I_{PP}$	Peak Pulse Current — maximum rated peak impulse current
$I_T$	On-state Current — maximum rated continuous on-state current
$I_{TSM}$	Peak One-cycle Surge Current — maximum rated one-cycle AC current
$V_s$	Switching Voltage — maximum voltage prior to switching to on state
$V_{DRM}$	Peak Off-state Voltage — maximum voltage that can be applied while maintaining off state
$V_F$	On-state Forward Voltage — maximum forward voltage measured at rated on-state current
$V_T$	On-state Voltage — maximum voltage measured at rated on-state current

\* For surge ratings, see table below.

Notes:

- All measurements are made at an ambient temperature of 25°C. IPP applies to -40°C through +85°C temperature range.
- Off-state capacitance (C<sub>0</sub>) is measured at 1 MHz with a 2 V bias and is typical value.
