

4-BIT BIDIRECTIONAL UNIVERSAL SHIFT REGISTER; 3-STATE

FEATURES

- Synchronous parallel or serial operating
- 3-state outputs
- Output capability: bus driver
- I²C category: MSI

GENERAL DESCRIPTION

The 74HC/HCT40104 are high-speed Si-gate CMOS devices and are pin compatible with the "40104" of the "4000B" series. They are specified in compliance with JEDEC standard no. 7A.

The 74HC/HCT40104 are universal shift registers featuring parallel inputs, parallel outputs, shift-right and shift-left serial inputs and 3-state outputs allowing the devices to be used in bus-organized systems.

In the parallel-load mode (S_0 and S_1 are HIGH), data is loaded into the associated flip-flop and appears at the output after the positive transition of the clock input (CP).

During loading, serial data flow is inhibited. Shift-right and shift-left are accomplished synchronously on the positive clock edge with serial data entered at the shift-right (D_{SR}) and shift-left (D_{SL}) serial inputs, respectively.

Clearing the register is accomplished by setting both mode controls (S_0 and S_1) LOW and clocking the register. When the output enable input (OE) is LOW, all outputs assume the high-impedance OFF-state (Z).

APPLICATIONS

- Arithmetic unit bus registers
- Serial/parallel conversion
- General-purpose register for bus organized systems
- General-purpose registers

SYMBOL	PARAMETER	CONDITIONS	TYPICAL		UNIT
			HC	HCT	
t_{PHL}/t_{PLH}	propagation delay CP to Q_n	$C_L = 15 \text{ pF}$ $V_{CC} = 5 \text{ V}$	13	15	ns
f_{max}	maximum clock frequency		62	57	MHz

GND = 0 V; $T_{amb} = 25^\circ\text{C}$; $t_r = t_f = 6 \text{ ns}$

Notes

1. C_{PD} is used to determine the dynamic power dissipation (P_D in μW):

$$P_D = C_{PD} \times V_{CC}^2 \times f_i + \sum (C_L \times V_{CC}^2 \times f_o) \text{ where:}$$

f_i = input frequency in MHz

C_L = output load capacitance in pF

f_o = output frequency in MHz

V_{CC} = supply voltage in V

$\sum (C_L \times V_{CC}^2 \times f_o)$ = sum of outputs

2. For HC the condition is $V_I = \text{GND to } V_{CC}$

For HCT the condition is $V_I = \text{GND to } V_{CC} - 1.5 \text{ V}$
