

## DUAL RETRIGGERABLE MONOSTABLE MULTIVIBRATOR WITH RESET

## FEATURES

- DC triggered from active HIGH or active LOW inputs
- Retriggerable for very long pulses up to 100% duty factor
- Direct reset terminates output pulse
- Schmitt-trigger action on all inputs except for the reset input
- Output capability: standard (except for nREXT/CEXT)
- I<sub>CC</sub> category: MSI

## GENERAL DESCRIPTION

The 74HC/HCT423 are high-speed Si-gate CMOS devices and are pin compatible with low power Schottky TTL (LSTTL). They are specified in compliance with JEDEC standard no. 7A.

The 74HC/HCT423 are dual retrigerable monostable multivibrators with output pulse width control by two methods. The basic pulse time is programmed by selection of an external resistor (R<sub>EXT</sub>) and capacitor (C<sub>EXT</sub>). The external resistor and capacitor are normally connected as shown in Fig. 6. Once triggered, the basic output pulse width may be extended by retriggering the gated active LOW-going edge input (nA) or the active HIGH-going edge input (nB). By repeating this process, the output pulse period (nQ = HIGH, nQ = LOW) can be made as long as desired. When nRD is LOW, it forces the nQ output LOW, the nQ output HIGH and also inhibits the triggering.

(continued on next page)

SYMBOL	PARAMETER	CONDITIONS	TYPICAL		UNIT
			HC	HCT	
t <sub>PHL</sub> / t <sub>PLH</sub>	propagation delay nA, nB to nQ, nQ nRD to nQ, nQ	C <sub>L</sub> = 15 pF V <sub>CC</sub> = 5 V REXT = 5 kΩ CEXT = 0 pF	25 20	26 22	ns ns
C <sub>I</sub>	input capacitance		3.5	3.5	pF
t <sub>W</sub>	minimum output pulse width nQ, nQ	notes 1 and 2	75	75	ns

GND = 0 V; T<sub>amb</sub> = 25 °C; t<sub>r</sub> = t<sub>f</sub> = 6 ns

## Notes

1. C<sub>PD</sub> is used to determine the dynamic power dissipation (P<sub>D</sub> in μW):

$$P_D = C_{PD} \times V_{CC}^2 \times f_1 + \Sigma(C_L \times V_{CC}^2 \times f_0) + 0.75 \times C_{EXT} \times V_{CC}^2 \times f_0 + D \times 16 \times V_{CC}$$

where:

f<sub>1</sub> = input frequency in MHz

f<sub>0</sub> = output frequency in MHz

D = duty factor in %

$\Sigma(C_L \times V_{CC}^2 \times f_0)$  = sum of outputs

C<sub>L</sub> = output load capacitance in pF

V<sub>CC</sub> = supply voltage in V

C<sub>EXT</sub> = timing capacitance in pF

2. For HC the condition is V<sub>I</sub> = GND to V<sub>CC</sub>

For HCT the condition is V<sub>I</sub> = GND to V<sub>CC</sub> - 1.5 V

## PACKAGE OUTLINES

16-lead DIL; plastic (SOT38Z).

16-lead mini-pack; plastic (SO16; SOT109A).

## PIN DESCRIPTION

PIN NO.	SYMBOL	NAME AND FUNCTION
1, 9	1A, 2A	trigger inputs (negative-edge triggered)
2, 10	1B, 2B	trigger inputs (positive-edge triggered)
3, 11	1RD, 2RD	direct reset action (active LOW)
4, 12	1Q, 2Q	outputs (active LOW)
7	2REXT/CEXT	external resistor/capacitor connection
8	GND	ground (0 V)
13, 5	1Q, 2Q	outputs (active HIGH)
14, 6	1CEXT, 2CEXT	external capacitor connection
15	1REXT/CEXT	external resistor/capacitor connection
16	V <sub>CC</sub>	positive supply voltage

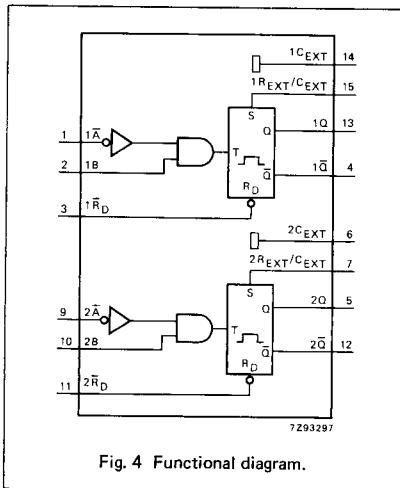

Fig. 4 Functional diagram.

#### GENERAL DESCRIPTION (Cont'd)

Figures 7 and 8 illustrate pulse control by reset. The basic output pulse width is essentially determined by the values of the external timing components  $R_{EXT}$  and  $C_{EXT}$ . For pulse widths, when  $C_{EXT} < 10\,000\text{ pF}$ , see Fig. 9.

When  $C_{EXT} > 10\,000\text{ pF}$ , the typical output pulse width is defined as:

$$t_W = 0.45 \times R_{EXT} \times C_{EXT} (\text{typ.}),$$

where,  $t_W$  = pulse width in ns;

$R_{EXT}$  = external resistor in  $\text{k}\Omega$ ;

$C_{EXT}$  = external capacitor in pF.

Schmitt-trigger action in the  $n\bar{A}$  and  $nB$  inputs, makes the circuit highly tolerant to slower input rise and fall times.

The "423" is identical to the "123" but cannot be triggered via the reset input.

#### FUNCTION TABLE

INPUTS			OUTPUTS	
$n\bar{R}_D$	$n\bar{A}$	$nB$	$nQ$	$n\bar{Q}$
L	X	X	L	H
X	H	X	L *	H *
X	X	L	L *	H *
H	L	↑	↑	↑
H	↓	H	↑	↑

H = HIGH voltage level

L = LOW voltage level

X = don't care

↑ = LOW-to-HIGH transition

↓ = HIGH-to-LOW transition

↑ = one HIGH level output pulse

↓ = one LOW level output pulse

\* If the monostable was triggered before this condition was established, the pulse will continue as programmed.

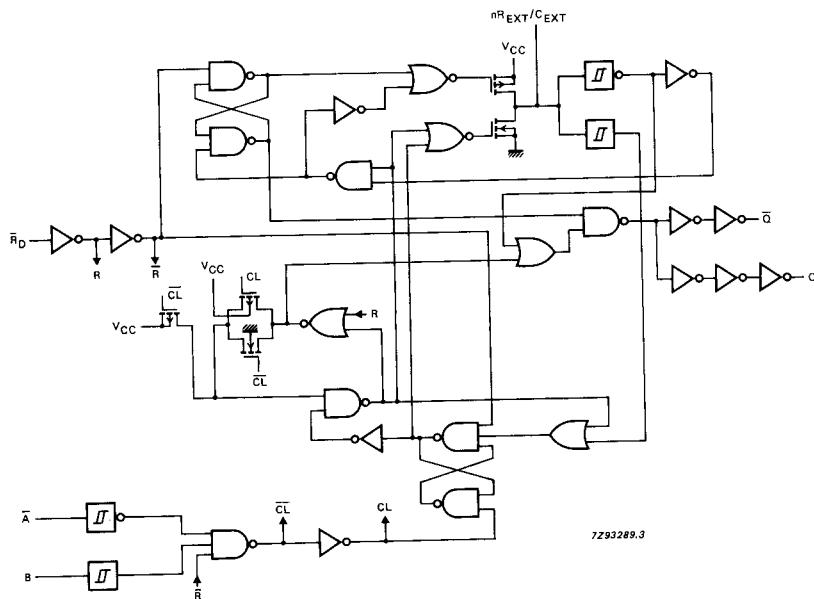

Fig. 5 Logic diagram.

**Note to Fig. 5**

It is recommended to ground pins 6 ( $2C_{EXT}$ ) and 14 ( $1C_{EXT}$ ) externally to pin 8 (GND).

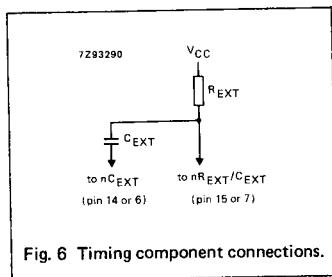

Fig. 6 Timing component connections.

## DC CHARACTERISTICS FOR 74HC

For the DC characteristics see chapter "HCMOS family characteristics", section "Family specifications".

Output capability: standard (except for nR<sub>EXT</sub>/C<sub>EXT</sub>)  
I<sub>CC</sub> category: MSI

## AC CHARACTERISTICS FOR 74HC

GND = 0 V; t<sub>r</sub> = t<sub>f</sub> = 6 ns; C<sub>L</sub> = 50 pF

**DC CHARACTERISTICS FOR 74HCT**

For the DC characteristics see chapter "HCMOS family characteristics", section "Family specifications".

Output capability: standard (except for  $nR_{EXT}/C_{EXT}$ )

$I_{CC}$  category: MSI

**Note to HCT types**

The value of additional quiescent supply current ( $\Delta I_{CC}$ ) for a unit load of 1 is given in the family specifications.

To determine  $\Delta I_{CC}$  per input, multiply this value by the unit load coefficient shown in the table below.

INPUT	UNIT LOAD COEFFICIENT
$n\bar{A}, nB$	0.35
$n\bar{R}_D$	0.50

**AC CHARACTERISTICS FOR 74HCT**

GND = 0 V;  $t_f = t_r = 6$  ns;  $C_L = 50$  pF

**Notes to AC characteristics**

1. For other  $R_{EXT}$  and  $C_{EXT}$  combinations see Fig. 9.

If  $C_{EXT} > 10 \text{ pF}$ , the next formula is valid:

$$t_W = K \times R_{EXT} \times C_{EXT} \text{ (typ.)}$$

where,  $t_W$  = output pulse width in ns;

$R_{EXT}$  = external resistor in  $\text{k}\Omega$ ;  $C_{EXT}$  = external capacitor in  $\text{pF}$ ;

$K$  = constant = 0.45 for  $V_{CC} = 5.0 \text{ V}$  and 0.55 for  $V_{CC} = 2.0 \text{ V}$ .

The inherent test jig and pin capacitance at pins 15 and 7 ( $nR_{EXT}/C_{EXT}$ ) is approximately 7 pF.

2. The time to retrigger the monostable multivibrator depends on the values of  $R_{EXT}$  and  $C_{EXT}$ .

The output pulse width will only be extended when the time between the active-going edges of the trigger input pulses meets the minimum retrigger time.

If  $C_{EXT} > 10 \text{ pF}$ , the next formula (at  $V_{CC} = 5.0 \text{ V}$ ) for the set-up time of a retrigger pulse is valid:

$$t_{rt} = 35 + (0.11 \times C_{EXT}) + (0.04 \times R_{EXT} \times C_{EXT}) \text{ (typ.)}$$

where,  $t_{rt}$  = retrigger time in ns;

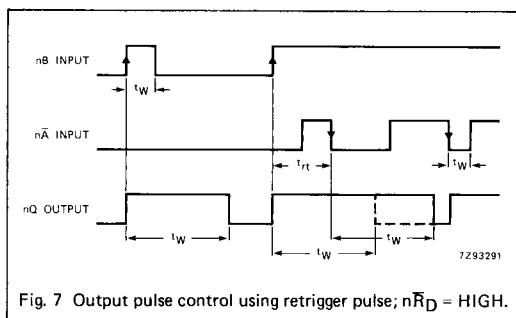

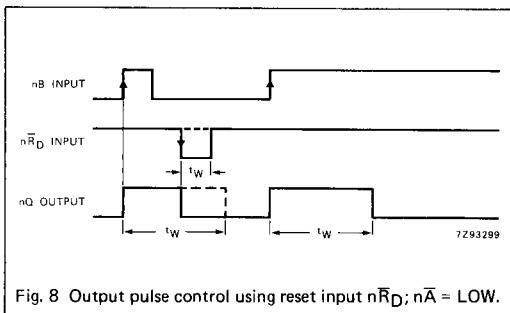

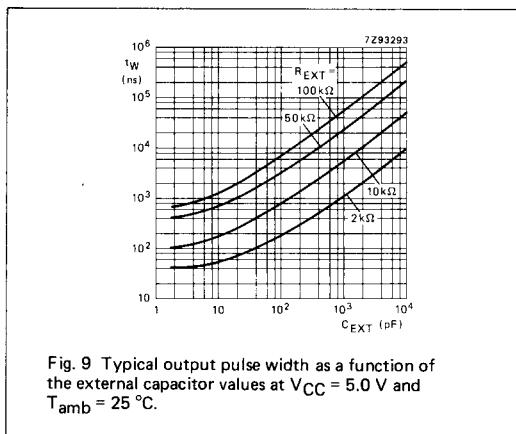

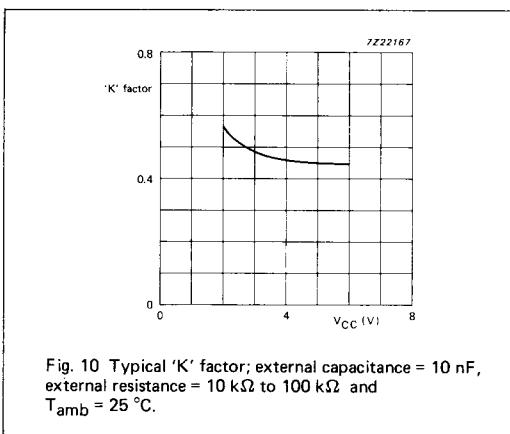

$C_{EXT}$  = external capacitor in  $\text{pF}$ ;

$R_{EXT}$  = external resistor in  $\text{k}\Omega$ .

The inherent test jig and pin capacitance at pins 15 and 7 ( $nR_{EXT}/C_{EXT}$ ) is approximately 7 pF.

3. When the device is powered-up, initiate the device via a reset pulse, when  $C_{EXT} < 50 \text{ pF}$ .

## AC WAVEFORMS

Fig. 7 Output pulse control using retrigger pulse;  $n\bar{R}_D = \text{HIGH}$ .Fig. 8 Output pulse control using reset input  $n\bar{R}_D$ ;  $n\bar{A} = \text{LOW}$ .Fig. 9 Typical output pulse width as a function of the external capacitor values at  $V_{CC} = 5.0$  V and  $T_{amb} = 25^\circ\text{C}$ .Fig. 10 Typical 'K' factor; external capacitance = 10 nF, external resistance = 10 kΩ to 100 kΩ and  $T_{amb} = 25^\circ\text{C}$ .

## APPLICATION INFORMATION

### Power-up considerations

When the monostable is powered-up it may produce an output pulse, with a pulse width defined by the values of  $R_X$  and  $C_X$ , this output pulse can be eliminated using the circuit shown in Fig. 11.

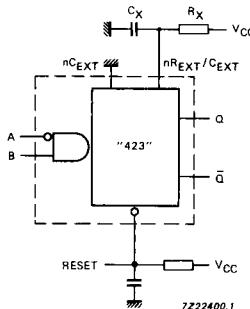

Fig. 11 Power-up output pulse elimination circuit.

### Power-down considerations

A large capacitor ( $C_X$ ) may cause problems when powering-down the monostable due to the energy stored in this capacitor. When a system containing this device is powered-down or a rapid decrease of  $V_{CC}$  to zero occurs, the monostable may sustain damage, due to the capacitor discharging through the input protection diodes. To avoid this possibility, use a damping diode ( $D_X$ ) preferably a germanium or Schottky-type diode able to withstand large current surges and connect as shown in Fig. 12.

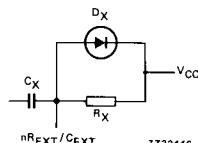

Fig. 12 Power-down protection circuit.
