Product Description

The PCS3P7101A is a low cost, single-output, clock synthesizer. The PCS3P7101A generates a 4x output clock from a 25 MHz standard fundamental mode, inexpensive crystal, or clock. It can replace multiple crystals and oscillators, saving valuable board space and cost. The device employs Spread Spectrum technique to reduce system electro-magnetic interference (EMI).

The device also has a power-down feature that tri-state the clock output and turns off the PLL when the \overline{PD} pin is taken low.

Pin Description

Pin #	Pin Name	Type	Description
1	CLKIN/XIN	I	Crystal connection or external reference frequency input. This pin has dual functions. It can be connected either to an external crystal or to an external reference clock.
2	VDD	P	Power supply for the entire chip.
3	VSS	P	Ground connection
4	NC	-	No Connection
5	ModOUT	O	Spread spectrum low EMI 4x clock output.
6	NC	-	No Connection
7	\overline{PD}	I	Powers down entire chip. Tri-states CLK outputs when low. Has an Internal pull-up resistor.
8	XOUT	O	Crystal connection. If using an external reference, this pin must be left unconnected
