

## Features

- High isolation: 41 dB @ 6 GHz
- Low insertion loss: 1.1 dB @ 6 GHz
- Fast switching time of 227 ns
- Power handling of 33 dBm CW
- Logic select (LS) pin provides maximum control logic flexibility
- Terminated all-off state mode
- External V<sub>SS</sub> pin to eliminate spur
- Packaging – 24-lead 4 × 4 × 0.85 mm QFN

## Applications

- Test and measurement
- Wireless applications up to 8 GHz
- Filter bank switching
- RF signal routing

## Product Description

The PE42582 is a HaRP™ technology-enhanced absorptive SP8T RF switch that supports a frequency range from 9 kHz to 8 GHz. An external V<sub>SS</sub> pin is available for bypassing the internal negative voltage generator in order for the PE42582 to deliver spur-free performance. It delivers high isolation, low insertion loss and fast switching time, making this device ideal for filter bank switching and RF signal routing in test and measurement (T&M) and wireless applications up to 8 GHz. No blocking capacitors are required if DC voltage is not present on the RF ports.

The PE42582 is manufactured on Peregrine's UltraCMOS® process, a patented advanced form of silicon-on-insulator (SOI) technology.

Peregrine's HaRP technology enhancements deliver high linearity and excellent harmonics performance. It is an innovative feature of the UltraCMOS process, offering the performance of GaAs with the economy and integration of conventional CMOS.

## Optional External V<sub>SS</sub>

For proper operation, the V<sub>SS\_EXT</sub> pin must be grounded or tied to the V<sub>SS</sub> voltage specified in **Table 2**. When the V<sub>SS\_EXT</sub> pin is grounded, FETs in the switch are biased with an internal negative voltage generator. For applications that require the lowest possible spur performance, V<sub>SS\_EXT</sub> can be applied externally to bypass the internal negative voltage generator.

## Absolute Maximum Ratings

Exceeding absolute maximum ratings listed in **Table 1** may cause permanent damage. Operation should be restricted to the limits in **Table 2**. Operation between operating range maximum and absolute maximum for extended periods may reduce reliability.

### ESD Precautions

When handling this UltraCMOS device, observe the same precautions as with any other ESD-sensitive devices. Although this device contains circuitry to protect it from damage due to ESD, precautions should be taken to avoid exceeding the rating specified in **Table 1**.

### Latch-up Immunity

Unlike conventional CMOS devices, UltraCMOS devices are immune to latch-up.

**Notes:**

- 1) Normal mode: connect  $V_{SS\_EXT}$  (pin 7) to GND ( $V_{SS\_EXT} = 0V$ ) to enable internal negative voltage generator.
- 2) Bypass mode: use  $V_{SS\_EXT}$  (pin 7) to bypass and disable internal negative voltage generator.
- 3) Insertion loss and isolation performance can be improved by a good RF ground on the LS pin (pin 1).
- 4) Defined with S-parameters, relative insertion phase ( $RFX-RF1$ ) =  $\angle S_{(x+1)1} - \angle S_{21}$ , where incident Port-1 is RFC, response Port-2 = RF1, and response Port-(x+1) = RFx.
- 5) The input 1dB and 0.1dB compression points are linearity figures of merit. Refer to Table 2 for the RF input power ( $50\Omega$ ).

## Switching Frequency

The PE42582 has a maximum 25 kHz switching frequency in normal mode (pin 7 tied to ground). A faster switching frequency is available in bypass mode (pin 7 tied to  $V_{SS\_EXT}$ ). The rate at which the PE42582 can be switched is then limited to the switching time as specified in Table 3.

Switching frequency describes the time duration between switching events. Switching time is the time duration between the point the control signal reached 50% of the final value and the point the output signal reaches within 10% or 90% of its target value.

## Spur-Free Performance

The PE42582 spur fundamental occurs around 5 MHz. Its typical performance in normal mode is  $-162$  dBm/Hz (pin 7 tied to ground), with 30 kHz bandwidth. If spur-free performance is desired, the internal negative voltage generator can be disabled by applying a negative voltage to  $V_{SS\_EXT}$  (pin 7).

## Hot-Switching Capability

The maximum hot switching capability of the PE42582 is 20 dBm above 100 MHz. Hot switching occurs when RF power is applied while switching between RF ports.

## Thermal Data

$\Psi_{JT}$  (Psi-JT), junction top-of-package, is a thermal metric to estimate junction temperature of a device on the customer application PCB (JEDEC JESD51-2).

$$\Psi_{JT} = (T_J - T_T)/P$$

where

$\Psi_{JT}$  = junction-to-top of package characterization parameter, °C/W

$T_J$  = die junction temperature, °C

$T_T$  = package temperature (top surface, in the center), °C

$P$  = power dissipated by device, Watts

**Table 4 • Thermal Data for PE42582**

Parameter	Typ	Unit
$\Psi_{JT}$	23	°C/W
$\Theta_{JA}$ , junction-to-ambient thermal resistance	63	°C/W

**Notes:**

- 1) LS has an internal 1 MΩ pull-up resistor to logic high. Connect LS to GND externally to generate a logic 0. Leaving LS floating will generate a logic 1.
- 2) LS = don't care, V4 = 1, V3 = V2 = V1 = 0, all ports are terminated to provide an all isolated state.

## Power De-rating Curve

Figure 2 shows the power de-rating curve showing P1dB compression, P0.1dB compression, maximum RF input power (pulsed), maximum RF input power (CW), absolute maximum RF terminated power (CW), and maximum RF terminated power (CW).

## Evaluation Kit

The high-throw count RF switch evaluation kit (EVK) includes hardware required to control and evaluate the functionality of the high-throw count switches. The high-throw count RF switch evaluation software can be downloaded at [www.psemi.com](http://www.psemi.com) and requires a PC running Windows® operating system to control the USB interface board. Refer to the *Multi-throw Count RF Switch Evaluation Kit (EVK) User's Manual* for more information.

## Pin Information

This section provides pinout information for the PE42582. Figure 22 shows the pin map of this device for the available package. Table 8 provides a description for each pin.

Figure 22 • Pin Configuration (Top View)

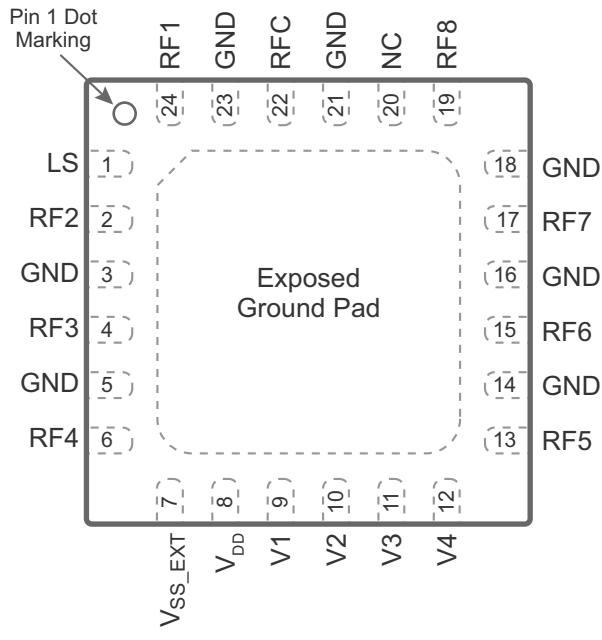

Table 8 • Pin Descriptions for PE42582

Pin No.	Pin Name	Description
1	LS	Logic Select—used to determine the definition for V1, V2, V3 and V4 pins
2	RF2 <sup>(1)</sup>	RF port 2
3, 5, 14, 16, 18, 21, 23	GND	Ground
4	RF3 <sup>(1)</sup>	RF port 3
6	RF4 <sup>(1)</sup>	RF port 4
7	V <sub>SS_EXT</sub> <sup>(2)</sup>	External V <sub>SS</sub> negative voltage control
8	VDD	Supply voltage (nominal 3.3V)
9	V1	Digital control logic input 1
10	V2	Digital control logic input 2
11	V3	Digital control logic input 3
12	V4	Digital control logic input 4
13	RF5 <sup>(1)</sup>	RF port 5
15	RF6 <sup>(1)</sup>	RF port 6
17	RF7 <sup>(1)</sup>	RF port 7
19	RF8 <sup>(1)</sup>	RF port 8
20	NC <sup>(3)</sup>	No connect
22	RFC <sup>(1)</sup>	RF common port
24	RF1 <sup>(1)</sup>	RF port 1
Pad	GND	Exposed pad: ground for proper operation

### Notes:

- 1) RF pins 2, 4, 6, 13, 15, 17, 19, 22, and 24 must be at 0 VDC. The RF pins do not require DC blocking capacitors for proper operation if the 0 VDC requirement is met.
- 2) Use V<sub>SS\_EXT</sub> (pin 7) to bypass and disable internal negative voltage generator. Connect V<sub>SS\_EXT</sub> (pin 7) to GND (V<sub>SS\_EXT</sub> = 0V) to enable internal negative voltage generator.
- 3) Pin 20 (NC) can be connected to GND or left not connected externally.

## Packaging Information

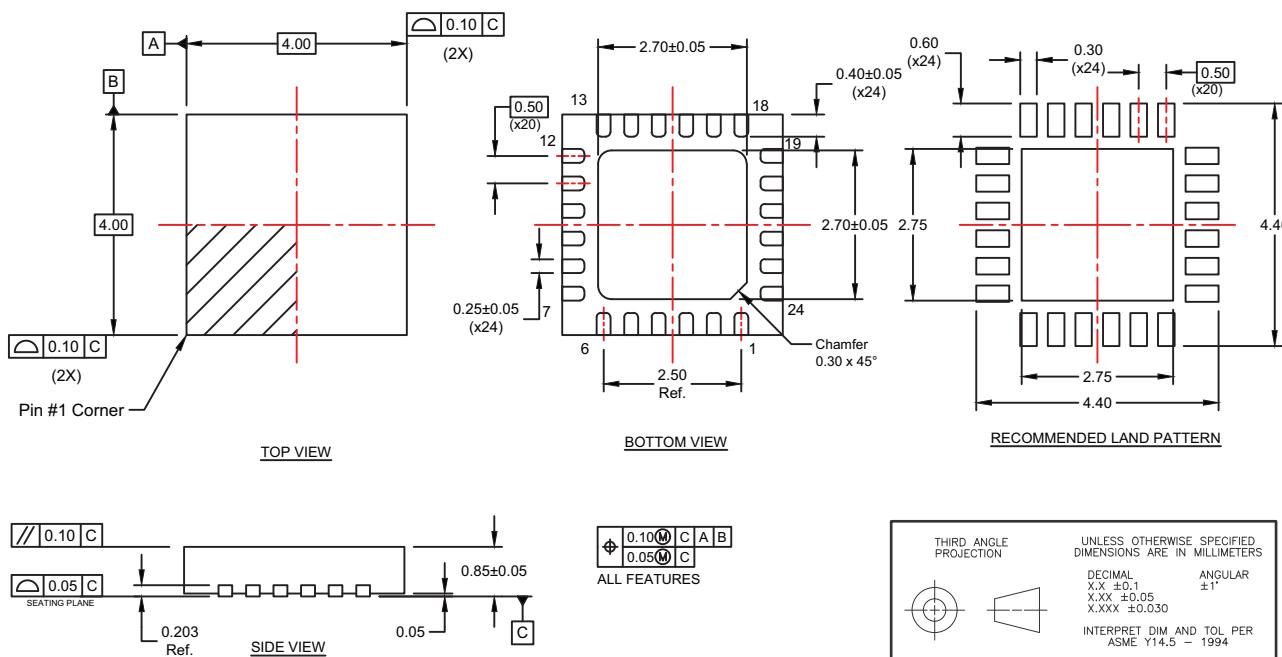

This section provides packaging data including the moisture sensitivity level, package drawing, package marking and tape-and-reel information.

### Moisture Sensitivity Level

The moisture sensitivity level rating for the PE42582 in the 24-lead  $4 \times 4 \times 0.85$  mm QFN package is MSL1.

### Package Drawing

### Advance Information

The product is in a formative or design stage. The datasheet contains design target specifications for product development. Specifications and features may change in any manner without notice.

### Preliminary Specification

The datasheet contains preliminary data. Additional data may be added at a later date. Peregrine reserves the right to change specifications at any time without notice in order to supply the best possible product.

### Product Specification

The datasheet contains final data. In the event Peregrine decides to change the specifications, Peregrine will notify customers of the intended changes by issuing a CNF (Customer Notification Form).
