### Description

The PI6C49S1504 is a high performance fanout buffer device which supports up to 1.5GHz frequency. The device also uses Pericom's proprietary input detection technique to make sure illegal input conditions will be detected and reflected by output states. This device is ideal for systems that need to distribute low jitter clock signals to multiple destinations.

### Applications

- Networking systems including switches and Routers
- High frequency backplane based computing and telecom platforms
