### Testing Method

Distance between emitter and detector specifies maximum distance that output waveform satisfies the standard (FIG-3) under the conditions below against the standard transmitter.

FIG-1

a. Measuring place

Indoor without extreme reflection of light.

b. Ambient light source

Detecting surface illumination is  $200 \pm 5 \text{ Lux}$  under ordinary white fluorescence lamp of no high frequency lightning.

c. Standard transmitter

Transmitter wave indicated in FIG-2 of standard transmitter is arranged to satisfy  $V_o \geq 50 \text{ mVp-p}$  under the measuring circuit specified in FIG-3

$T_{cyc} - T_d > 25 \text{ ms}$  is recommended for optimal function

### Precautions for Use

- Store and use where there is no force causing transformation or change in quality.
- Store and use where there is no corrosive gas or sea (salt) breeze.
- Store and use where there is no extreme humidity.
- Solder the lead pin within the condition of ratings. After soldering, do not add exterior force.
- Do not wash this device. Wipe the stains of diode side with a soft cloth. You can use the solvent, ethyl alcohol, or methyl alcohol only.
- To prevent static electricity damage to the pre-amp, make sure that the human body, the soldering iron are connected to ground before using.
