

The PJ1537 provides 2 output voltage : 3.3V and either 2.5V or 1.8V fixed with 1.0A each output current capability. These devices have been optimized for low voltage where transient response and minimum input voltage critical.

Current limit features protect the outputs against short circuit currents. On-chip thermal limiting provides protection against any combination of overload and ambient temperature that would create excessive junction temperatures.

The PJ1537 series regulators are available in 5-lead TO-263 power packages.

FEATURES

- Hard Disk Drives, CD-ROMs, DVDs
- High efficiency linear regulators
- Post regulators for switching supplies
- ADSL and Cable Modems
- 5V to 3.3V and 2.5V linear regulators
- Motherboard with multiple supplies

APPLICATIONS

- Battery protection
- Load switch
- Power management

Notes:

1. See thermal regulation specifications for changes in output voltage due to heation effects. Load and line regulation are measured at a constant junction temperature by low duty cycle pulse testing.
2. Power dissipation is determined by input/output differential and the output current. Guaranteed maximum output power will not be available over the full input/output voltage range.
