

Low-Power Programmable Quick Turn Clock™

FEATURES

- Advanced low-power, space saving programmable PLL design
- Very low Jitter and Phase Noise (30-70ps Pk-Pk typical)
- Up to 2 programmable clock outputs
- Output frequency up to 75MHz.
- Accepts Crystal or Ref Clock input
 - Fundamental Crystal: 10MHz-50MHz
 - Reference Input: 1MHz to 100MHz
- Accepts $\geq 0.1V$ reference signal input voltage
- Single 1.8V, 2.5V, or 3.3V $\pm 10\%$ power supply
- Operating temperature range from -40C to 85°C
- Available in 6-pin TDFN, SC70, and SOT23, **GREEN** /RoHS compliant packages

DESCRIPTION

The PL611s-08 is a low-power general purpose frequency synthesizer and a member of PhaseLink's Programmable 'Quick Turn Clock (QTC)' family. PhaseLink's PL611s-08 can generate two system clock frequencies of up to 75MHz from a 10MHz to 50MHz fundamental crystal or a 1MHz to 100MHz Reference clock source. The PL611s-08 offers the best phase noise and jitter performance, and power consumption of its rivals. Cascading of the ICs to produce additional clock frequencies is also supported.

FUNCTIONAL DESCRIPTION

PL611s-08 is a highly featured, very flexible, advanced programmable PLL design for high performance, low-power, small form-factor applications. The PL611s-08 accepts a fundamental input crystal of 10MHz to 50MHz or reference clock input of 1MHz to 100MHz and is capable of producing two outputs up to 75MHz. This flexible design allows the PL611s-08 to deliver any PLL generated frequency, F_{REF} (Crystal or Ref Clk) frequency or $F_{REF}/2$ to CLK0 and/or CLK1. Some of the design features of the PL611s-08 are mentioned below:

PLL Programming

The PLL in the PL611s-08 is fully programmable. The PLL is equipped with an 8-bit input frequency divider (R-Counter), and an 11-bit VCO frequency feedback loop divider (M-Counter). The output of the PLL is transferred to a 5-bit post VCO divider (P-Counter). The output frequency is determined by the following formula $[F_{OUT} = F_{REF} * M / (R * P)]$.

Clock Output (CLK0)

CLK0 is the main clock output. The PL611s-08 can also be programmed to provide a second clock output, CLK1, on the programmable I/O pin (see OE/CLK1 pin description below). The output of CLK0 can be configured as the PLL output ($F_{VCO}/(2 * P)$), F_{REF} (Crystal or Ref Clk Frequency) output, or $F_{REF}/2$ output. The output drive level can be programmed to Low Drive (4mA), Standard Drive (8mA) or High Drive (16mA). The maximum output frequency is 75MHz.

Programmable I/O (OE/CLK1)

The PL611s-08 provides one programmable I/O pin which can be configured as one of the following functions:

Output Enable (OE)

The Output Enable feature allows the user to enable and disable the clock output(s) by toggling the OE pin. The OE pin incorporates a 60kΩ pull up resistor giving a default condition of logic "1".

Clock Output (CLK1)

The CLK1 feature allows the PL611s-08 to have an additional clock output. This output can be programmed to one of the following:

- F_{REF} - Reference (Crystal or Ref Clk) Frequency
- $F_{REF} / 2$
- CLK0
- CLK0 / 2

LAYOUT RECOMMENDATIONS

The following guidelines are to assist you with a performance optimized PCB design:

- Keep all the PCB traces to the PL611s-08 as short as possible, as well as keeping all other traces as far away from it as possible.
- Place a 0.01μF~0.1μF decoupling capacitor between VDD and GND, on the component side of the PCB, close to the VDD pin. It is not recommended to place this component on the backside of the PCB. Going through vias will reduce the signal integrity, causing additional jitter and phase noise.
- It is highly recommended to keep the VDD and GND traces as short as possible.
- When connecting long traces (> 1 inch) to a CMOS output, it is important to design the traces as a transmission line or 'stripline', to avoid reflections or ringing. In this case, the CMOS output needs to be matched to the trace impedance. Usually 'striplines' are designed for 50Ω impedance and CMOS outputs usually have lower than 50 Ω impedance so matching can be achieved by adding a resistor in series with the CMOS output pin to the 'stripline' trace.
- Please contact PhaseLink for additional information on how to design outputs driving long traces or for additional application assistance.
