

Three Terminal Medium Current Positive Voltage Regulators

PL78M05XT3

Description

These regulators employ internal current-limiting and thermal-shutdown, making them essentially indestructible. They can deliver up to 500mA output current, if the case temperature can be kept at $T_c=25^\circ\text{C}$.

They are intended as fixed voltage regulators in a wide range of applications including local (on-card) regulation for elimination of noise and distribution problems associated with single-point regulation. In addition, they can be used with power pass elements to make high-current voltage regulators. The PL78M05XT3 used as a Zener diode/resistor combination replacement, offers an effective output impedance improvement of typically two orders of magnitude, along with lower quiescent current and lower noise.

Absolute Maximum Ratings ($T_a=25^\circ\text{C}$)

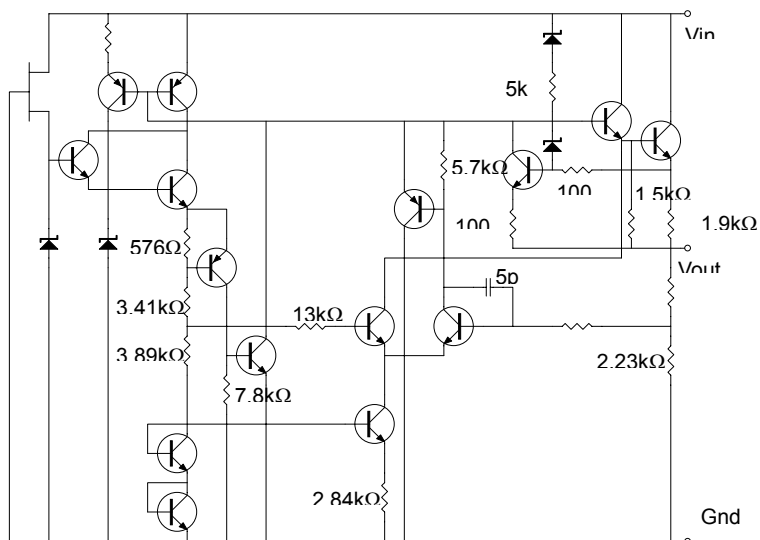

- Input Voltage..... 35 V
- Total Power Dissipation..... Internally limited
- Operating Temperature Range..... 0 °C to +125 °C
- Maximum Junction Temperature..... 125 °C
- Storage Temperature Range..... -55 °C to +150 °C
- Lead Temperature (Soldering 10S)..... 260 °C

Typical Application

Note:
 C1 and C2 are required if regulator is located far from power supply filter and load, or oscillation may induced on the loop.
