USAGE CAUTIONS

1. This product is weak for static electricity by designed with high-speed integrated circuit so protect against static electricity when handling.
2. By-pass capacitor of more than $0.1\text{ }\mu\text{F}$ is used between V_{CC} and GND near device. Also, ensure that the distance between the leads of the photocoupler and capacitor is no more than 10 mm.
3. Pins 1, 4 (which is an NC^{*1} pin) can either be connected directly to the GND pin on the LED side or left open. Also, Pin 7 (which is an NC^{*1} pin) can either be connected directly to the GND pin on the detector side or left open.

Unconnected pins should not be used as a bypass for signals or for any other similar purpose because this may degrade the internal noise environment of the device.

*1 NC: Non-Connection (No Connection)

4. Avoid storage at a high temperature and high humidity.

(4) Cautions

- Fluxes

Avoid removing the residual flux with freon-based and chlorine-based cleaning solvent.

2. Cautions regarding noise

Be aware that when voltage is applied suddenly between the photocoupler's input and output or between V_{CC} -GND at startup, the output transistor may enter the on state, even if the voltage is within the absolute maximum ratings.
