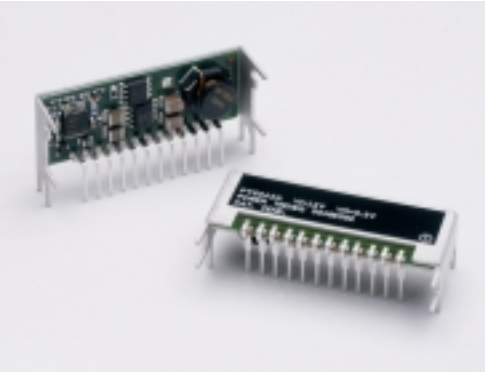
PT6340 Series

6-A 12-V Input Adjustable Integrated Switching Regulator

EXCALIBUR

SLTS138A

Revised (2/15/2002)



Features

- 6A Output Current
- Input Voltage Range: 10.8 V to 13.2 V
- 90% Efficiency
- Adjustable Output Voltage
- Standby Function
- Short Circuit Protection
- Small Footprint (0.61 in^2)
- Solderable Copper Case
- 8.8 10^6 Hours MTBF

Description

The PT6340 Excalibur™ power modules are a series of high performance Integrated Switching Regulators (ISRs), housed in a thermally efficient solderable copper case. These modules operate from a 12V input voltage bus to produce a high-output low-voltage power source; ideal for powering the industry's latest DSP and microprocessors. The series includes standard output bus voltages ranging from 5VDC to 1.2VDC.

The innovative copper case construction provides superior thermal performance in a small footprint. Both through-hole and surface mount pin configurations are available. The PT6340 series operating features include external output voltage adjustment, an On/Off inhibit, and short-circuit protection. A 100µF input, and 330µF output capacitor are required for proper operation.

Ordering Information

PT6341❒ = 5.0 Volts
PT6342❒ = 3.3 Volts
PT6343❒ = 2.5 Volts
PT6344❒ = 1.8 Volts
PT6345❒ = 1.5 Volts
PT6346❒ = 1.2 Volts

PT Series Suffix (PT1234x)

Case/Pin Configuration	Order Suffix	Package Code *
Vertical	**N**	(EPH)
Horizontal	**A**	(EPJ)
SMD	**C**	(EPK)

** Previously known as package styles 1540/50.*

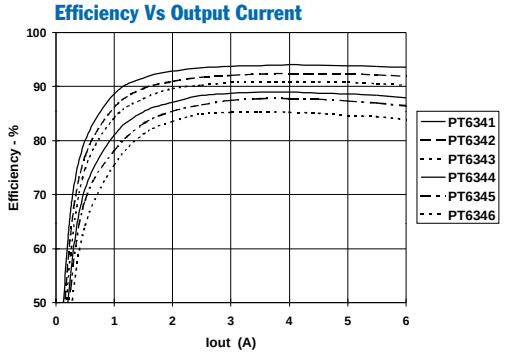
Notes: *(1) The ISR will operate at no load with reduced specifications.*
(2) The Inhibit control (pin 1) has an internal pull-up and if it is left open circuit the module will operate when input power is applied. The open-circuit voltage is the input voltage V_{in}. Use a discrete MOSFET to control the Inhibit pin, and ensure a transitioin time of less than ≤10µs. Consult the related application note for other interface considerations.
(3) For operation below 0°C, Cin and Cout must have stable characteristics. Use either low ESR tantalum or Oscon® capacitors.
(4) See Safe Operating Area curves or contact the factory for the appropriate derating.
(5) The case pins on through-hole package types (suffixes N & A) must be soldered. For more information consult the applicable package outline drawing.

Input/Output Capacitors: *The PT6340 regulator series requires a 100µF electrolytic (or tantalum) capacitor at the input and 330µF at the output for proper operation in all applications. In addition, the input capacitance, C_{in}, must be rated for a minimum of 740mArms of ripple current, and the ESR of the output capacitor, C_{out}, must less than 50mΩ @100kHz. For transient or dynamic load applications additional output capacitance may be necessary. For more information consult the related application note on capacitor recommendations.*

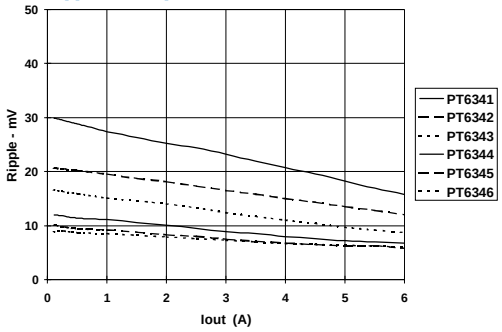
Typical Characteristics

PT6340 Series Performance; @V_{IN} =12.0V (See Note A)

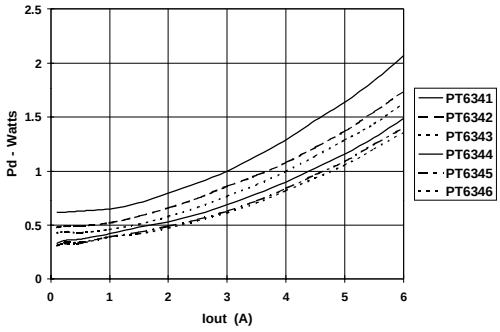
Efficiency Vs Output Current



Ripple Vs Output Current

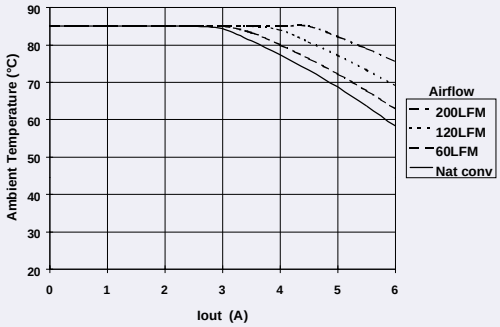


Power Dissipation Vs Output Current

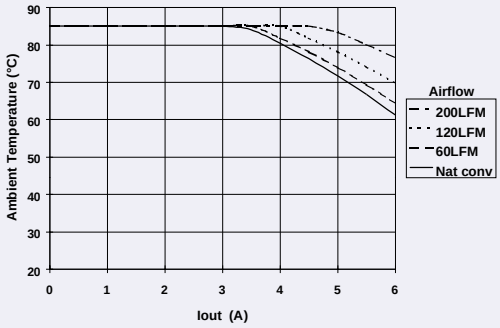


Safe Operating Area (See Note B)

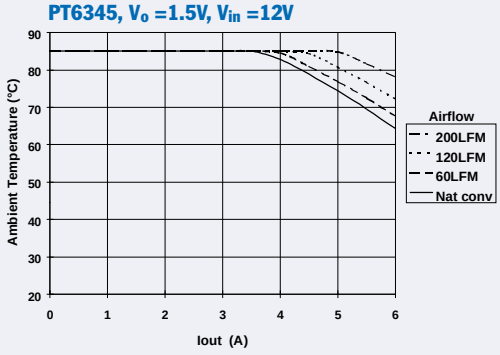
PT6341, V_o =5.0V, V_{in} =12V



PT6342, V_o =3.3V, V_{in} =12V



PT6345, V_o =1.5V, V_{in} =12V



Note A: *Characteristic data has been developed from actual products tested at 25°C. This data is considered typical data for the Converter.*
Note B: *SOA curves represent the conditions at which internal components are at or below the manufacturer's maximum operating temperatures*

Using the Inhibit Function on the PT6340 12V Bus Excalibur™ Series Converters

The PT6340 series are high efficiency regulators that are designed to operate off a 12V input bus. These devices incorporate an inhibit function, which may be used in applications that require a power-up/shutdown feature.

The inhibit function is provided by the *Inhibit** control, pin 1. If pin 1 is left open-circuit the regulator operates normally, and provides a regulated output whenever a valid supply voltage is applied to V_{in} (pins 2– 4) with respect to GND (pins 5–8). If a low voltage [2] is then applied to pin 1 the regulator output will be disabled and the input current drawn by the ISR will typically drop to 0.5mA [4]. The standby control may also be used to hold-off the regulator output during the period that input power is applied.

The *Inhibit** input can be controlled with an open-collector (or open-drain) discrete transistor (See Figure 1). The input is internally pulled-up to the input voltage, V_{in} [1]. Table 1 gives the control voltage requirements.

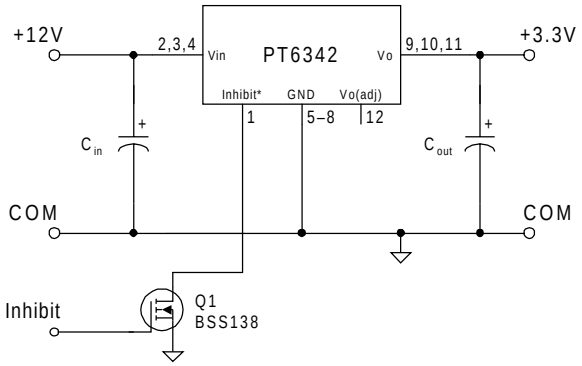
Table 1 Inhibit Control Requirements [3]

Parameter	Min	Typ	Max
V_{IL}	-0.1V		0.6V
V_{IH}	2.0V		V_{in}
I_{IL}		0.5mA	

Notes:

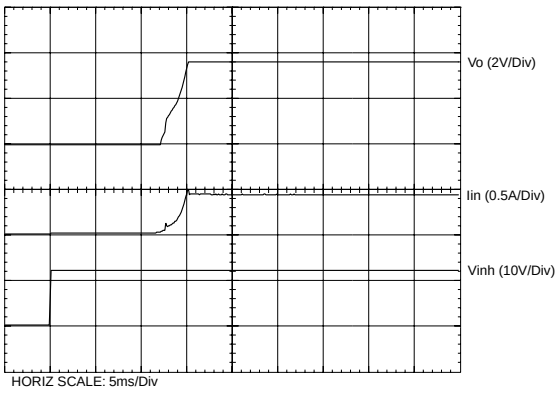
1. The inhibit control input requires no external pull-up resistor. The open-circuit voltage of the *Inhibit** input is typically the input voltage, V_{in}.
2. The inhibit control input is *Not* compatible with TTL devices. An open-collector device, preferably a discrete bipolar transistor (or MOSFET) is recommended. To ensure the regulator output is disabled, the control pin must be pulled to less than 0.6Vdc with a low-level 0.5mA sink to ground.
3. An external source voltage can be used to control the *Inhibit** pin. To guarantee the inhibit and enable status of the regulator, the source must be capable of meeting the voltage requirements in Table 1 .
4. When the regulator output is disabled the current drawn from the input source is typically reduced to 0.5mA.

Figure 1



Turn-On Time: In the circuit of Figure 1, turning Q_1 on applies a low voltage to the *Inhibit** control (pin 1) and disables the regulator ouput. Correspondingly, turning Q_1 off removes the low-voltage signal and enables the output. Once enabled, the output will typically experience a 10–15ms delay followed by a predictable ramp-up of voltage. The regulator should provide a fully regulated output voltage within 30ms. The waveform of Figure 2 shows the output voltage response of a PT6342 (3.3V) following the turn-off of Q_1. The turn off of Q_1 corresponds to the rise in V_{inh}. The waveforms were measured with a 12Vdc input voltage, and 2 ½ Adc load.

Figure 2



Capacitor Recommendations for the PT6340 6A Excalibur™ Regulator Series

Input Capacitors:
Output Current ≤4A Continuous (Table 1)

The recommended input capacitance is determined by 740 milli-amperes (rms) minimum ripple current rating, less than 100mΩ ESR (equivalent series resistance), and 100µF minimum capacitance. The ripple current rating, ESR, and operating temperature are the major considerations when selecting the input capacitor.

It is recommended that tantalum capacitors have a minimum voltage rating of twice (2×) the maximum dc voltage, plus the ac ripple. This is necessary to insure reliability with 12V input voltage bus applications. None of the 100µF tantalum capacitors were found to meet this requirement.

Input Capacitors:
Output Current >4A Continuous (Table 2)

The recommended input capacitance is determined by 1.0 amperes (rms) minimum ripple current rating and 100µF minimum capacitance. The ripple current rating, combined with less than 100mΩ ESR (equivalent series resistance) value are the major considerations, along with temperature, when selecting the input capacitor.

It is recommended that tantalum capacitors have a minimum voltage rating of twice (2×) the maximum dc voltage, plus the ac ripple. This is necessary to insure reliability for 12V input voltage bus applications. None of the 100µF tantalum capacitors were found to meet this requirement.

Output Capacitors:
Output Current 0–6A (Table 1 & Table 2)

The ESR of the required capacitor must be less than, or equal to 50mΩ. Electrolytic capacitors have poor ripple performance at frequencies greater than 400kHz but excellent low frequency transient response. Above the ripple frequency, ceramic decoupling capacitors are necessary to improve the transient response and reduce any high frequency noise components apparent during higher current excursions. Preferred low ESR type capacitor's part numbers are identified in the capacitor tables.

Tantalum Capacitors

Tantalums are acceptable on the output bus but only the AVX TPS series, Sprague 593D/594/595 series or Kemet T495/T510 series. These capacitors are recommended over many other types due to their higher rated surge, power dissipation, and ripple current capability. As a caution, the TAJ series by AVX is not recommended. This series exhibits considerably higher ESR and lower ripple current capability. The TAJ series is also less reliable than the TPS series when determining power dissipation capability. Tantalum or Oscon capacitor types are recommended for applications where ambient temperatures fall below 0°C.

Capacitor Tables

Table 1 and Table 2 identify the vendors with acceptable ESR and maximum allowable ripple current (rms) ratings. The output capacitors are identified in both tables under the "Output Bus" column with the required quantity.

The input capacitors are listed in both tables. Table 1 has the recommended input capacitors when operating the ISR at a load current of 4Adc or less, and Table 2 identifies input capacitors for ISR load currents greater than 4Adc.

This is not an extensive capacitor list. Capacitors from other vendors are available with comparable specifications. Those listed are for guidance. The RMS ripple current rating and ESR (Equivalent Series Resistance at 100kHz) are critical parameters necessary to insure both optimum regulator performance and long capacitor life.

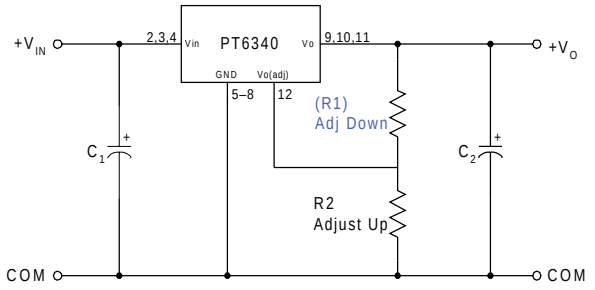
Adjusting the Output Voltage of the PT6340 Excalibur™ 6 A, 12 V Bus Step-Down ISRs

The output voltage of the PT6340 Series ISRs may be adjusted higher or lower than the factory trimmed pre-set voltage with the addition of a single external resistor. Table 1 accordingly gives the allowable adjustment range for each model for either series as V_a (min) and V_a (max).

Adjust Up: An increase in the output voltage is obtained by adding a resistor R_2, between pin 12 (V_o adj) and pins 5-8 (GND).

Adjust Down: Add a resistor (R_1), between pin 12 (V_o adj) and pins 9-11 (V_o).

Figure 1



The values of (R_1) [adjust down], and R_2 [adjust up], can also be calculated using the following formulas. Refer to Figure 1 and Table 2 for both the placement and value of the required resistor; either (R_1) or R_2 as appropriate.

$$(R_1) = \frac{R_o\,(V_a - V_r)}{V_o - V_a} - R_s \quad k\Omega$$

$$R_2 = \frac{V_r \cdot R_o}{V_a - V_o} - R_s \quad k\Omega$$

Where: V_o = Original output voltage
V_a = Adjusted output voltage
V_r = Reference voltage (Table 1)
R_o = Resistance constant (Table 1)
R_s = Internal series resistance (Table 1)

Notes:

1. Use only a single 1% resistor in either the (R_1) or R_2 location. Place the resistor as close to the ISR as possible.
2. Never connect capacitors from V_o adj to either GND or V_{out}. Any capacitance added to the V_o adjust pin will affect the stability of the ISR.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/ Ball Finish	MSL Peak Temp (3)	Samples (Requires Login)
PT6341A	NRND	SIP MODULE	EPJ	12	21	Pb-Free (RoHS)	Call TI	N / A for Pkg Type	
PT6341N	NRND	SIP MODULE	EPH	12	21	Pb-Free (RoHS)	Call TI	N / A for Pkg Type	
PT6342A	NRND	SIP MODULE	EPJ	12	21	Pb-Free (RoHS)	Call TI	N / A for Pkg Type	
PT6342C	NRND	SIP MODULE	EPK	12	21	Pb-Free (RoHS)	Call TI	Level-1-215C-UNLIM	
PT6342N	NRND	SIP MODULE	EPH	12	21	Pb-Free (RoHS)	Call TI	N / A for Pkg Type	
PT6343A	NRND	SIP MODULE	EPJ	12	21	Pb-Free (RoHS)	Call TI	N / A for Pkg Type	
PT6343C	NRND	SIP MODULE	EPK	12	21	Pb-Free (RoHS)	Call TI	Level-1-215C-UNLIM	
PT6343N	NRND	SIP MODULE	EPH	12	21	Pb-Free (RoHS)	Call TI	N / A for Pkg Type	
PT6344C	NRND	SIP MODULE	EPK	12	21	Pb-Free (RoHS)	Call TI	Level-1-215C-UNLIM	
PT6344N	NRND	SIP MODULE	EPH	12	21	Pb-Free (RoHS)	Call TI	N / A for Pkg Type	
PT6345C	NRND	SIP MODULE	EPK	12	21	Pb-Free (RoHS)	Call TI	Level-1-215C-UNLIM	
PT6345N	NRND	SIP MODULE	EPH	12	21	Pb-Free (RoHS)	Call TI	N / A for Pkg Type	

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
