

Product Description

Qorvo's QPA2598 is a packaged broadband driver amplifier fabricated on Qorvo's QGaN15 0.15 um GaN on SiC process. Operating from 6 to 12 GHz, the QPA2598 achieves 2.5 W output power with a Power Added Efficiency of 30 % and harmonic suppression of -30dBc. Under nominal bias, it provides 22 dB small signal gain and 16 dB of large signal power gain.

The QPA2598 is available in small form factor 4x4 mm overmold QFN which allows for easy system integration. The QPA2598 is an ideal choice to drive Qorvo's high performing GaN HPAs allowing the user to run both driver and HPA off the same voltage rail.

EVB and BOM

PCB core material is Rogers Corp. RO4003C, RF Layer is 0.008" thick, $\epsilon_r = 3.38$. Metal layers are 0.5 oz. copper. The microstrip line at the connector interface is optimized for the Southwest Microwave end launch connector 1092-01A-5.

The trace pattern shown has been developed and tested for optimized assembly at Qorvo. The PCB land pattern has been developed to accommodate lead tolerances. Since processes vary from company to company, careful process development is recommended.
