Current Adjustment Using Hybrid Pin 4

The QPA3240 can be operated over a wide range of current to provide maximum required performance with minimum current consumption. A single external resistor connected between pin 4 and GND allows variation of current between 470mA and 150mA (typ.). Within the recommended range of current between 470mA and 370mA gain (S21) change is less than 0.2dB and noise figure change is less than 0.1dB. If pin 4 is not connected the devices operates at maximum current, see table below.

Examples of connecting pin 4:

Device current [mA], typical	External resistor [Ω]
470	>50k (open)
450	16k
430	7k5
400	3k9
370	2k4
340	1k5
150	0 (short)

 $Z_S = Z_L = 75\Omega$
