

## General Description

The QPB1006 is a high power connectorized SSPA module with bias circuit card suitable for installation into OEM assemblies. The amplifier requires +28 Volts DC and customer supplied thermal management. The device is an excellent candidate for high power test equipment, communications, jamming applications, or any application requiring capability for simultaneous power amplification of signals across the 2.0 – 7.5 GHz spectrum.

The QPB1006 incorporates Qorvo high efficiency GaN MMICs, spatially combined in a compact structure to achieve robust, high performance power amplification across the 2.0 – 7.5 GHz frequency range.

The included bias circuit card assembly provides and sequences all required DC voltages from a single customer supplied +28 volt input. Mute and pulse functionality, as well as a summary fault output are available. Individual device current monitoring in analog format is also available.

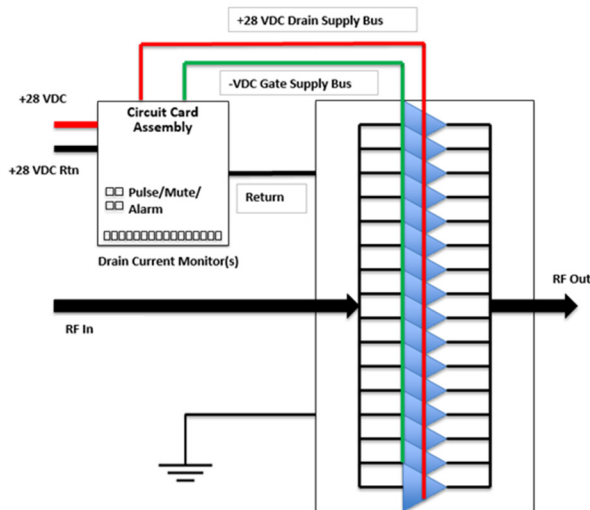

## Product Features

- Frequency: 2.0 – 7.5 GHz
- Saturated Output Power: 150 watts (nom.)
- Small Signal Gain: 30 dB
- Bias Conditions: +28 V single supply,  $I_{DQ} = 9.6A$
- Included gate and drain voltage generation
- Included gate and drain voltage sequencing

*Performance characteristics vary across the product's operating band. Refer to the electrical specification table and data plots for details, including variance across operating temperature.*

## Applications

- Jamming
- Radar
- Military Communications
- Defense Communications
- Test & Measurement
- EMI Testing

## Ordering Information

Part No.	ECCN	Description
QPB1006	3A001.b.4.b.1	2.0 – 7.5 GHz 150 Watt Amplifier

### Absolute Maximum Ratings

Parameter	Rating
RF Input Power, CW, 50 Ω, T <sub>CASE</sub> =25 °C	+28 dBm
Load VSWR	3.0:1
Device Voltage (V <sub>DD</sub> )	+29 V
Dissipated Power (P <sub>DISS</sub> )	700 W
Storage Temperature	-55 to +100 °C

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability.

### Recommended Operating Conditions

Parameter	Min	Typ	Max	Units
Voltage (V <sub>DC</sub> )		+28		V
Operating Temperature	-40	+25	+71	°C
Quiescent Current (I <sub>dq</sub> )	8.0	9.6	12.0	A

Electrical specifications are measured at specified test conditions. Specifications are not guaranteed over all recommended operating conditions.
