

DESCRIPTION

The R8A66162SP is a semiconductor integrated circuit for LED array driver with 32-bit serial-input, parallel - output shift register, equipped with direct set input and output latches.

The R8A66162SP guarantees sufficient 24mA ($V_{CC}=5.0V$ case) output current to drive anode common LED, allowing 32-bit simultaneous and continuous current output. The parallel outputs are open-drain outputs.

In addition, as this product has been designed in complete CMOS, power consumption can be greatly reduced when compared with conventional BIPOLAR or Bi-CMOS products. Furthermore, pin layout ensures the realization of an easy printed circuit. R8A66162SP is the succession product of M66313FP.

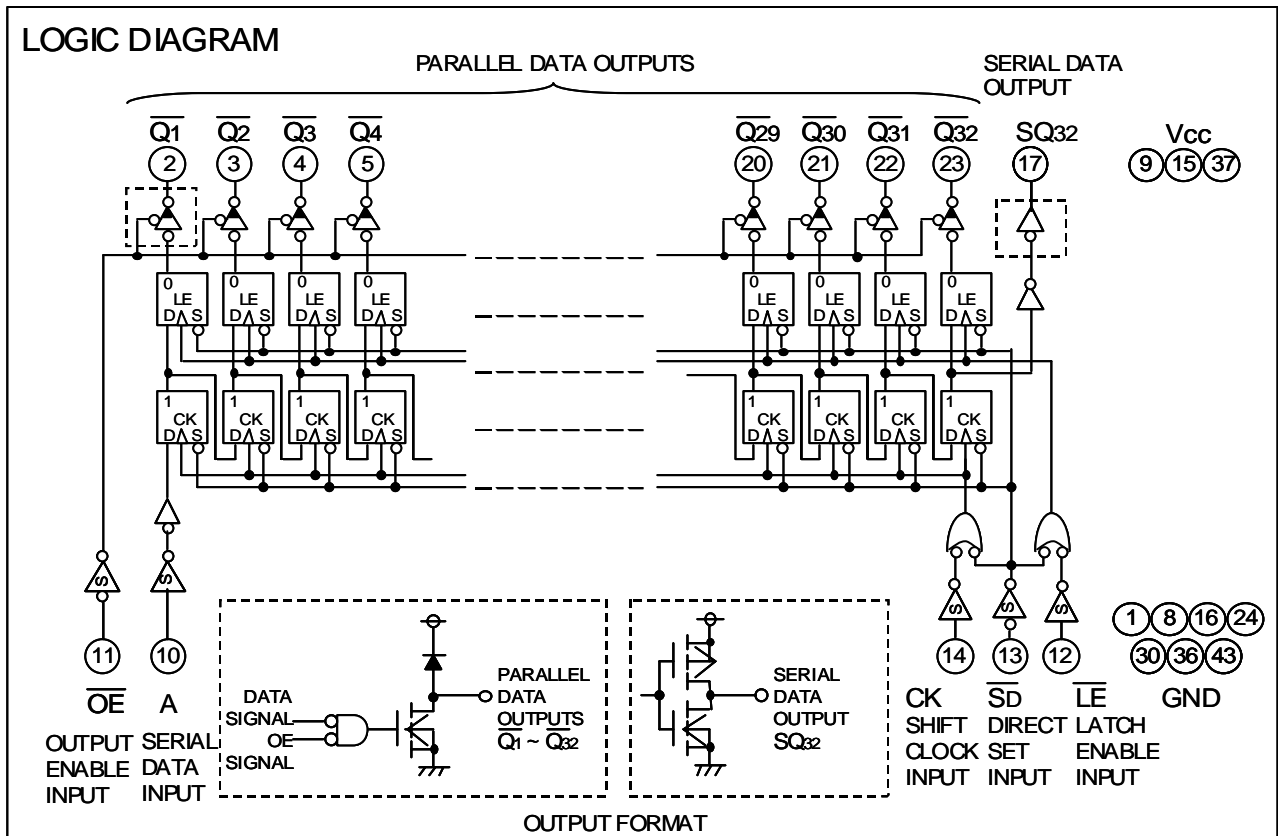

FEATURES

- Anode common LED drive
- V_{CC} 5V or 3.3V single power supply
- High output current: All parallel outputs $\overline{Q_1} \sim \overline{Q_{32}}$ $I_{OL}=24mA$ (at $V_{CC}=5.0V$), $I_{OL}=12mA$ (at $V_{CC}=3.3V$), LEDs can be turned on simultaneously.
- Low power dissipation: 200uW/package (max) ($V_{CC}=5.0V$, $T_a=25^\circ C$, quiescent state)
- High noise margin: Employment of Schmitt-trigger circuit on all inputs allows application with long wiring.
- Direct set input (\overline{SD})
- Open-drain output ($\overline{Q_1} \sim \overline{Q_{32}}$)
- Serial data output for cascading (SQ_{32})
- Wide operating temperature range ($T_a=-40^\circ C \sim +85^\circ C$)
- Pin configuration for easy layout on PCB. (Pin configuration allows easy cascade connection or LED connection)

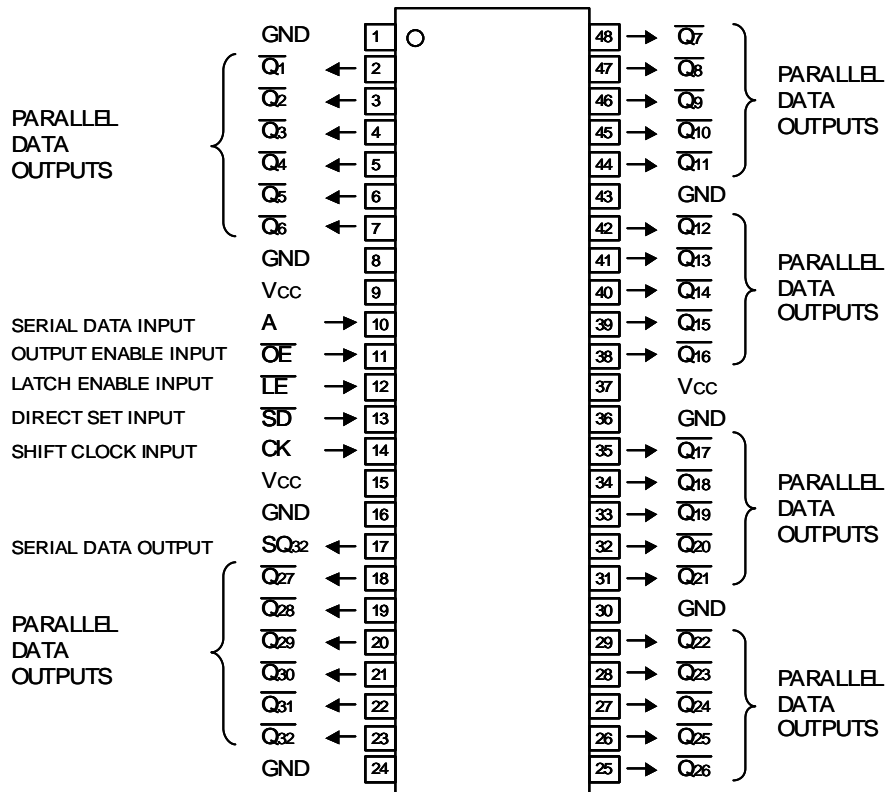

APPLICATION

- LED array drive, The various LED display modules
- PPC, Printer, VCR, Mini-compo, Button-Telephone etc. All of LED display equipments

BLOCK DIAGRAM

PIN CONFIGURATION (TOP VIEW)

FUNCTIONAL DESCRIPTION

The employment of silicon gate CMOS process of the R8A66162SP guarantees low power dissipation and maintains high noise margin as well as high output current and high speed required to drive LEDs.

Each shift register bit consists of a flip-flop for shifting and an output latch.

The shift operation takes place when the shift clock input CK changes from low-level to high-level.

The serial data input A corresponds to the data input of the first-stage shift register, and the shift register is shifted in sequence when a pulse is applied to CK.

If the latch-enable input \overline{LE} is turned high-level, the content of the shift register at that instant is latched.

The parallel data outputs $\overline{Q_1} \sim \overline{Q_{32}}$ are open-drain outputs.

To expand the number of bits, use the serial data output SQ₃₂ which shows the output of the shift register of the 32nd bit.

If the direct set input \overline{SD} is turned low-level, $\overline{Q_1} \sim \overline{Q_{32}}$ and SQ₃₂ are set. Then shift register and latches are set. If the high-level input is applied to the output enable input \overline{OE} , $\overline{Q_1} \sim \overline{Q_{32}}$ are set to the high-impedance state, but SQ₃₂ is not set to the high-impedance state. The shift operation is not affected when \overline{OE} is changed.

FUNCTION TABLE (Note: 1)

OPERATION MODE	INPUT					PARALLEL OUTPUTS																																SERIAL OUTPUT SQ ₃₂

Notes:

1. This document is provided for reference purposes only so that Renesas customers may select the appropriate Renesas products for their use. Renesas neither makes warranties or representations with respect to the accuracy or completeness of the information contained in this document nor grants any license to any intellectual property rights or any other rights of Renesas or any third party with respect to the information in this document.
2. Renesas shall have no liability for damages or infringement of any intellectual property or other rights arising out of the use of any information in this document, including, but not limited to, product data, diagrams, charts, programs, algorithms, and application circuit examples.
3. You should not use the products or the technology described in this document for the purpose of military applications such as the development of weapons of mass destruction or for the purpose of any other military use. When exporting the products or technology described herein, you should follow the applicable export control laws and regulations, and procedures required by such laws and regulations.
4. All information included in this document such as product data, diagrams, charts, programs, algorithms, and application circuit examples, is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas products listed in this document, please confirm the latest product information with a Renesas sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas such as that disclosed through our website. (<http://www.renesas.com>)
5. Renesas has used reasonable care in compiling the information included in this document, but Renesas assumes no liability whatsoever for any damages incurred as a result of errors or omissions in the information included in this document.
6. When using or otherwise relying on the information in this document, you should evaluate the information in light of the total system before deciding about the applicability of such information to the intended application. Renesas makes no representations, warranties or guarantees regarding the suitability of its products for any particular application and specifically disclaims any liability arising out of the application and use of the information in this document or Renesas products.
7. With the exception of products specified by Renesas as suitable for automobile applications, Renesas products are not designed, manufactured or tested for applications or otherwise in systems the failure or malfunction of which may cause a direct threat to human life or create a risk of human injury or which require especially high quality and reliability such as safety systems, or equipment or systems for transportation and traffic, healthcare, combustion control, aerospace and aeronautics, nuclear power, or undersea communication transmission. If you are considering the use of our products for such purposes, please contact a Renesas sales office beforehand. Renesas shall have no liability for damages arising out of the uses set forth above.
8. Notwithstanding the preceding paragraph, you should not use Renesas products for the purposes listed below:
 - (1) artificial life support devices or systems
 - (2) surgical implantations
 - (3) healthcare intervention (e.g., excision, administration of medication, etc.)
 - (4) any other purposes that pose a direct threat to human lifeRenesas shall have no liability for damages arising out of the uses set forth in the above and purchasers who elect to use Renesas products in any of the foregoing applications shall indemnify and hold harmless Renesas Technology Corp., its affiliated companies and their officers, directors, and employees against any and all damages arising out of such applications.
9. You should use the products described herein within the range specified by Renesas, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas shall have no liability for malfunctions or damages arising out of the use of Renesas products beyond such specified ranges.
10. Although Renesas endeavors to improve the quality and reliability of its products, IC products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Please be sure to implement safety measures to guard against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other applicable measures. Among others, since the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
11. In case Renesas products listed in this document are detached from the products to which the Renesas products are attached or affixed, the risk of accident such as swallowing by infants and small children is very high. You should implement safety measures so that Renesas products may not be easily detached from your products. Renesas shall have no liability for damages arising out of such detachment.
12. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written approval from Renesas.
13. Please contact a Renesas sales office if you have any questions regarding the information contained in this document, Renesas semiconductor products, or if you have any other inquiries.
