Wiegand Format 26 bits format form by 26 bits data which including 24 bit user data and 2 bit parity bit. As far as module concerned, former 12bit of 24 bit data is even & the behind 12bits is odd.

24 bit data correspond to 32 bit is read only 24bit which behind ID, I.E. D27-D20, D17-D10, D07-D00,

Output data format as chart below:

Thereinto :

- ● PE is even bit, PO is odd bit;
- ● E is the data bit which was involved in even, O is the data bit which was involved in odd;
- ● DXX is the data bit which correspond to Mifare@ Standard & Light card read only ID;
- ● Wiegand Format 26bit output time sequence:

Symbol	Specification	Representative value
T_{HD}	Send data to active time extension	2ms
T_{SD}	Send data to finish time extension	2ms
T_{DW}	Data impulse width	80 μ s
T_{IW}	Data impulse interval width	1ms

Reading Type:

Standard design -- card can't be read again within the range of read antenna after read once. User must move it out of reading antenna range first, swipe card again & can be read.

Special design -- card can be read continuously within the range of read antenna.
