

- Ideal Front-End Filter for European Wireless Receivers
- Low-Loss, Coupled-Resonator Quartz Design
- Simple External Impedance Matching
- Complies with Directive 2002/95/EC (RoHS)<sup>10</sup>

The RF1172D is a low-loss, compact, and economical surface-acoustic-wave (SAW) filter designed to provide front-end selectivity in 433.92 MHz receivers. Receiver designs using this filter include superheterodynes with 10.7 MHz or 500 kHz IF, plus direct conversion and superregenerative receivers. Typical applications of these receivers are wireless remote-control and security devices operating in Europe under ETSI I-ETS 300 220-1.

This coupled-resonator filter (CRF) uses selective null placement to provide suppression, typically greater than 40 dB, of the LO and image spurious responses in superheterodyne receivers with 10.7 MHz IF's. RFM's advanced SAW design and fabrication technology is utilized to achieve high performance and very low loss with simple external impedance matching.

# RF1172D

# 433.92 MHz SAW Filter

#### **Electrical Characteristics**

Characteristic			Notes	Minimum	Typical	Maximum	Units
Center Frequency at 25°C Absolute Frequency		f <sub>c</sub>	1, 2, 3		433.92		MHz
Insertion Loss (433.760 - 434.080)		IL <sub>MIN</sub>	1, 3		1.6	2.5	dB
3 dB Bandwidth		BW3	1, 3	500	600	800	kHz
Rejection Attenuation: (relative to ILmin) 10 - 414 MHz				50	55		
	414 - 424 MHz			45	50		
	424 - 431 MHz			30	34		
	431 - 432 MHz			18	22		dB
432 - 433 MHz 434.92 - 442 MHz			1, 3	12	17		uБ
				16	19		
442 - 550 MHz 550 - 1000 MHz				40	45		
				50	55		
Temperature	Freq. Temp. Coefficient				0.032		ppm/°C <sup>2</sup>
Frequency Aging	Absolute Value during the First Year	fA	5		≤10		ppm/yr
Impedance @ fc	Input $Z_{IN} = R_{IN}IIC_{IN}$	Z <sub>IN</sub>	1	1428 Ω    111.5 pF			
	Output Z <sub>OUT</sub> = R <sub>OUT</sub> IIC <sub>OUT</sub>	Z <sub>OUT</sub>	96		61 Ω    111.8 pF		
Lid Symbolization (Y=year WW=week S=shift)		477    YWWS					
Standard Reel Quantity	Reel Size 7 Inch	9	500 Pieces/Reel				
	Reel Size 13 Inch		Э	3000 Pieces/Reel			

CAUTION: Electrostatic Sensitive Device. Observe precautions for handling.

Notes:

- 1. Unless noted otherwise, all measurements are made with the filter installed in the specified test fixture which is connected to a 50  $\Omega$  test system with VSWR  $\leq$  1.2:1. The test fixture L and C are adjusted for minimum insertion loss at the filter center frequency, f<sub>c</sub>. Note that insertion loss and bandwidth and passband shape are dependent on the impedance matching component values and quality.
- 2. The frequency  $f_c$  is defined as the midpoint between the 3dB frequencies.
- 3. Where noted specifications apply over the entire specified operating temperature range of -40°C to +105°C.
- 4. The turnover temperature,  $T_0$ , is the temperature of maximum (or turnover) frequency,  $f_0$ . The nominal frequency at any case temperature,  $T_c$ , may be calculated from:  $f = f_0 [1 FTC (T_0 T_c)^2]$ .
- 5. Frequency aging is the change in fc with time and is specified at +65°C or less. Aging may exceed the specification for prolonged temperatures above +65°C. Typically, aging is greatest the first year after manufacture, decreasing significantly in subsequent years.
- 6. The design, manufacturing process, and specifications of this device are subject to change.
- 7. One or more of the following U.S. Patents apply: 4,54,488, 4,616,197, and others pending.
- 8. All equipment designs utilizing this product must be approved by the appropriate government agency prior to manufacture or sale.
- 9. Tape and Reel Standard Per ANSI / EIA 481.
- 10. This product complies with Directive 2002/95/EC of the European Parlament and of the Council of 27 January 2003 on the restriction of the use of certain hazadous substances in electrical and electronic equipment.

## **Absolute Maximum Ratings**

Rating		Value	Units
Input Power Level		10	dBm
DC Voltage		12	VDC
Storage Temperature		-40 to +125	°C
Operable Temperature Range		-40 to +125	°C
Soldering Temperature	(10 seconds / 5 cycles max.)	260	°C
