

### Typical Applications

- 3V CDMA/AMPS Cellular Handsets
- 3V CDMA2000/1X Cellular Handsets
- Spread-Spectrum Systems
- Designed for Compatibility with Qualcomm Chipsets

### Product Description

The RF3300-2 is a high-power, high-efficiency linear amplifier module targeting 3V handheld systems. The device is manufactured on an advanced Gallium Arsenide Heterojunction Bipolar Transistor (HBT) process, and has been designed for use as the final RF amplifier in dual-mode 3V CDMA/AMPS handheld digital cellular equipment, spread-spectrum systems, and other applications in the 824MHz to 849MHz band. The RF3300-2 has a digital control line for low power application to reduce the current drain. The device is self-contained with 50Ω input and output that is matched to obtain optimum power, efficiency, and linearity characteristics. The RF3300-2 contains a temperature compensating bias circuit to improve performance over temperature.

### Package Style: Module (6mmx7.5mm)

### Features

- Single 3V Supply with Internal  $V_{REF}$
- Integrated Power Detect Circuit
- 27dB Linear Gain
- 55mA Idle Current
- Temperature Compensating Bias Circuit
- Integrated PA Enable Switch

Pin	Function	Description	Interface Schematic
1	VCC3	Bias circuit and HDET power supply. A low frequency decoupling capacitor (2.2 $\mu$ F) is required. Type: P	
2	GND	Ground connection. Connect to the GND_SLUG pin. For best performance, keep traces physically short and connect immediately to ground plane. Type: P	
3	GND	Ground connection. Connect to the GND_SLUG pin. For best performance, keep traces physically short and connect immediately to ground plane. Type: P	
4	RF IN	RF input internally matched to 50 $\Omega$ . This input is internally AC-coupled. Type: A, I	
5	VCC1	First stage power supply. A low frequency decoupling capacitor (2.2 $\mu$ F) is required. Type: P	
6	VCC2	Output stage power supply. A low frequency decoupling capacitor (2.2 $\mu$ F) is required. Type: P	
7	RF OUT	RF output internally matched to 50 $\Omega$ . This input is internally AC-coupled. Type: A, O	
8	GND	Ground connection. Connect to the GND_SLUG pin. For best performance, keep traces physically short and connect immediately to ground plane. Type: P	
9	GND	Ground connection. Connect to the GND_SLUG pin. For best performance, keep traces physically short and connect immediately to ground plane. Type: P	
10	PDET_OUT	Power detector output. Type: A, O	
11	VMODE	Gain step control. When this pin is High, the module is in low power mode, and the amplifier's current is reduced. When this pin is Low, the module is in high power mode. Voltage should not be applied to this pin before VCC3 is applied. Type: D, I	
12	PA_ON	Device enable control. When this pin is High, the device is on. When this pin is Low, the device is off. Voltage should not be applied to this pin before VCC3 is applied. Type: D, I	
13	GND_SLUG	Ground connection. The backside of the package should be soldered to a top side ground pad which is connected to the ground plane with multiple vias. The pad should have a short thermal path to the ground plane.	

Note: Where Type code is: I=Input; O=Output; A=Analog; D=Digital; P=Power

## Evaluation Board Schematic

(Download [Bill of Materials](http://www.rfmd.com) from www.rfmd.com.)

**NOTE:**

Resistors R2 and R3 are provided on the evaluation board to protect against power sequencing issues. (Refer to pin descriptions 11 and 12.) These resistors are not needed when the VCC3 is connected to the handset battery.
