Note on Electrical Characteristics

■ Vocabulary

I_{hold} = Hold current: maximum current device will pass without tripping in 23°C still air.

I_{trip} = Trip current: minimum current at which the device will trip in 23 °C still air.

V_{max} = Maximum voltage device can withstand without damage at rated current (I_{max})

I_{max} = Maximum fault current device can withstand without damage at rated voltage (V_{max})

P_{d typ} = Power dissipated from device when in the tripped state at 23 °C still air.

R_{min} = Minimum resistance of device in initial (un-soldered) state.

R_{1max} = Maximum resistance of device at 23 °C measured one hour after tripping or reflow soldering of 260 °C for 20 sec.

- Caution: Operation beyond the specified rating may result in damage and possible arcing and flame.
- Specifications are subject to change without notice.

Polymeric PTC Selecting Guide

- Determine the following operating parameters for the circuits:
 - Normal operating current (I_{hold})
 - Maximum circuit voltage (V_{max})
 - Maximum interrupt current (I_{max})
 - Normal operating temperature surrounding device (min°C/max°C)
- Select the device form factor and dimension suitable for the application:
 - Surface Mount Device (SMD)
 - Radial Leaded Device (RLD)
 - Axial Leaded Device (ALD)
 - DISC Device
 - Other Customized Form Factors
- Compare the maximum rating for V_{max} and I_{max} of the PPTC device with the circuit in application and make sure the circuit's requirement does not exceed the device rating.
- Check that PPTC device's trip time (time-to-trip) will protect the circuit.
- Verify that the circuit operating temperature is within the PPTC device's normal operating temperature range.
- Verify the performance and suitability of the chosen PPTC device in the application.
