## 1. Outline

This IC is the power management IC for GPS-PND/MID.

It integrates three high-efficiency step-down DCDC converters, seven low dropout regulators, power control logic, Li-ion Battery Charger, I2C-Bus Interface, voltage detections, thermal shut-down, and etc.

## 2. Feature

### •System

- ✓ I2C-Bus interface @3.4MHz and 400kHz
- ✓ Detector Function (System/IO/Battery-Voltage-detector, UVLO)
- ✓ Thermal Shutdown Function
- ✓ Watchdog timer
- ✓ Power on key input for System's power up
- ✓ Power on reset output for CPU
- ✓ Flexible power-on/off sequence by OTP
- ✓ Flexible DCDCx and LDOx default-on/off control by OTP

### •High Efficiency Step-down DC/DC Converters

- ✓ DC/DC1 0.6-3.5V Max 3000mA
- ✓ DC/DC2 0.6-3.5V Max 2000mA
- ✓ DC/DC3 0.6-3.5V Max 2000mA
- ✓ Soft-start circuit

### •Low Drop Voltage Regulators

- ✓ LDO1 0.9-3.5V Max 300mA
- ✓ LDO2 0.9-3.5V Max 300mA
- ✓ LDO3 0.6-3.5V Max 300mA
- ✓ LDO4 0.9-3.5V Max 200mA
- ✓ LDO5 0.9-3.5V Max 200mA
- ✓ LDORTC1 1.7-3.5V Max 10mA (AlwaysOn, For coin battery)
- ✓ LDORTC2 0.9-3.5V Max 10mA (AlwaysOn)
- ✓ Over current Protection and Short circuit Protection.

### •Li-ion Battery Charger

- ✓ Supports AC adapter charging and USB charging in an individual port
- ✓ With the current limit protection and charge current control.
- ✓ The system can power on even when Li-ion Battery is low voltage or open.
- ✓ Rapid timer and Trickle timer.
- ✓ Power-path control.
- ✓ Over temperature protection

### •Fuel Gauge

- ✓ 12-bit resolution.
- ✓ 1 second integration.

### •ADC

- ✓ 12-bit resolution A/D converter
- ✓ Eight channels: LIMMON, VADP, VUSB, VBAT, VSYS, THERMBAT and two external(GPIO) pins.
- ✓ Single/Auto conversion mode
- ✓ Detect high/low thresholds which can be set

### •4ch-GPIO

- ✓ Supports interrupt function (level/edge) for input signals
- ✓ Outputs power-on signal for external devices
- ✓ Power on/off input for System's power up/down
- ✓ DCDCx and LDOx can be controlled by external input
- ✓ GPIO2 can output LDORTC2
- ✓ GPIO0 and GPIO1 have input to ADC for voltage monitor
- ✓ GPIO0 and GPIO1 have maximum 15mA sink for LED.

### •Interrupt Controller (INTC)

### •Package QFN0606-48(0.4mm pitch)

### •Process CMOS

### 3. Block Diagram

## 4. Electrical Characteristics

### 4.1 Absolute Maximum Ratings

Exposure to the condition exceeded absolute maximum ratings may cause the permanent damages and affect the reliability and safety of both device and systems using the device. The functional operations cannot be guaranteed beyond specified values in the recommended conditions.

| Symbol      | Parameter                        | Condition  | Min  | Max                                   | Units     |
|-------------|----------------------------------|--|------|---------------------------------------|-----------|
| $V_{PS1}$   | Power Supply Voltage 1           | $V_{ADP}^*$ , $V_{USB}^*$ pin                                    | -0.3 | 7.0                                   | V         |
| $V_{PS2}$   | Power Supply Voltage 2           | $V_{INP1-3}$ , $V_{INL1-2}$ ,<br>$V_{SYS1-2}$ , $V_{BAT1-2}$ pin | -0.3 | 6.0                                   | V         |
| $V_{PS3}$   | Power Supply Voltage 3           | $V_{DDIO}$ pin   | -0.3 | 4.5                                   | V         |
| $V_{INPUT}$ | Input Voltage Range              | PWRON, RESETO, INTB,<br>SLEEP pin                                | -0.3 | $V_{SYS} + 0.3$                       | V         |
|             |                                  | SDA, SCL pin   | -0.3 | $V_{DDIO} + 0.3$                      | V         |

Note\*1: I:Input, O:Output

Note\*2: A:Analog, D:Digital, P:Power, G:Ground

Note\*3: Reset State: RESET0=Low.

Note\*4: Vinmax:Maximum input voltage

Note\*5: GP00-GP03 : "Input" or "Output" is selectable by OTP. Input/Output type (CMOS or NMOS or Analog or Nch Open Drain Output) is selectable by OTP. Refer to the chapter of GPIO for detail.

Table 6-1 Pin Description

## 7. Power Control

This PMU has the power-on/off sequence that can be flexibly set by OTP. The default on/off, timing, and voltage of DCDCx and LDOx are programmable. In addition, GPIO0-GPIO3 pins output the power-on/off signal to external LDO/DCDC by the setting of OTP.

Table 8-2 Regulator Table (LDO)

## 9. Li-ion Battery Charger

This PMU integrates Li-ion battery charger with the power path control, and supports the following functions.

- ✓ Two external power input ports. ( VADP port for AC adapter , VUSB port for USB bus power )
- ✓ The charging current limit setting for the battery. (max 1.8A)
- ✓ The output current limit setting for system load. (max 2.5A for AC adapter input )
- ✓ Integrated MOSFET of battery side. (No external MOSFET required.)
- ✓ The full charging voltage setting for the various batteries. ( from 4.05V to 4.35V )

The thermistor monitor for voltage control compliant with JEITA.

### 9.1 Li-ion Battery Charger Block Diagram

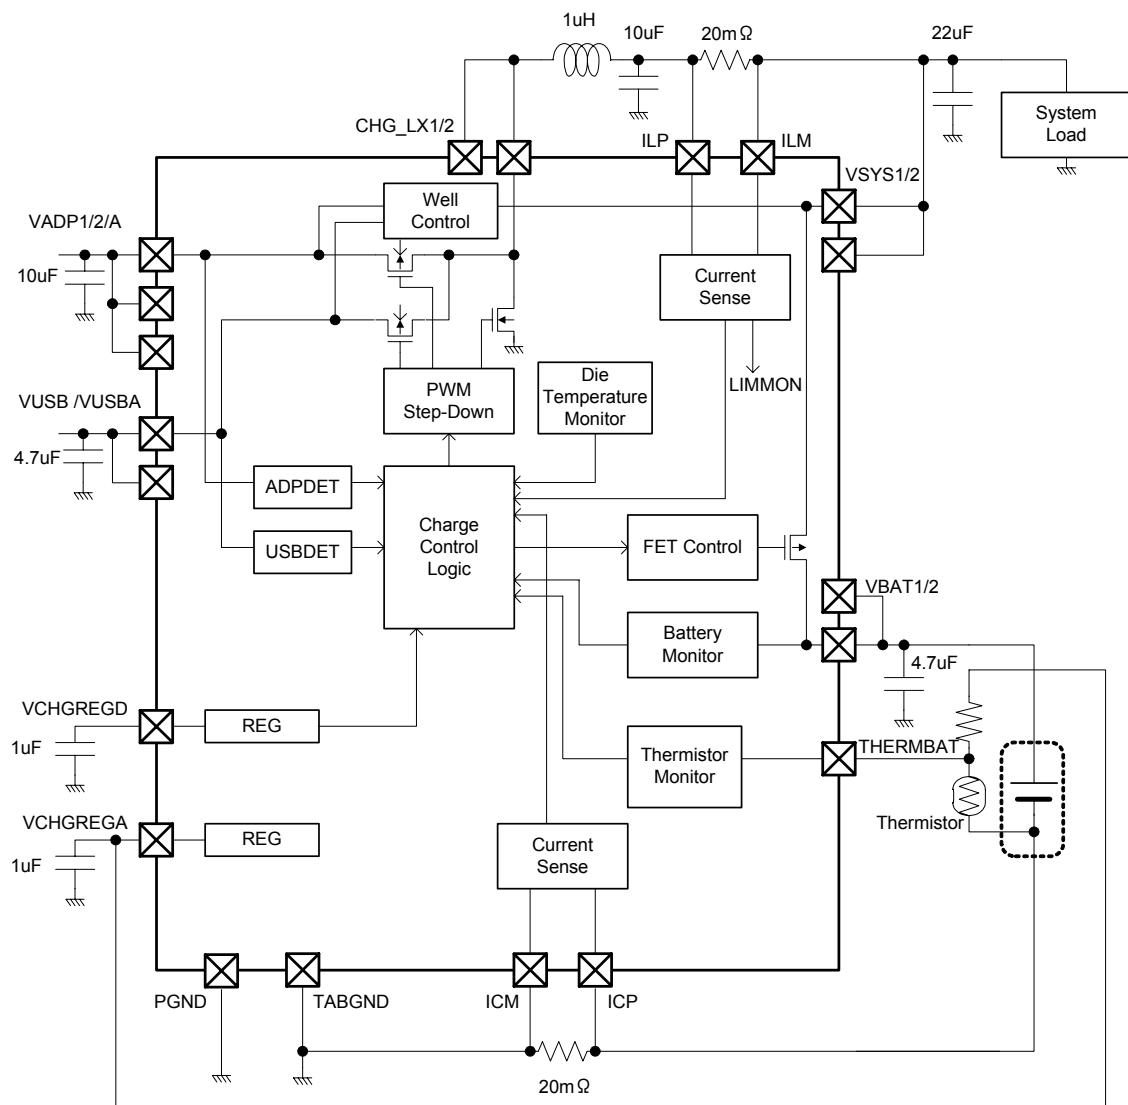

Fig 9-1 Li-ion Battery Charger Block Diagram

## 10. Fuel Gauge

This PMU integrates a Fuel Gauge.

- Battery Fuel Gauge for 1-Series Li-ion applications
- Measure battery voltage and temperature by AD converter (12bit)
- Measure battery current by original coulomb counter include offset cancel circuit
- Calculate remaining battery capacity compensate change that depends on temperature and aging
- Predict remaining battery life at present rate of discharge
- Predict remaining time until battery reaches full charge
- Display battery aging state

### 10.1 Fuel Gauge Block Diagram

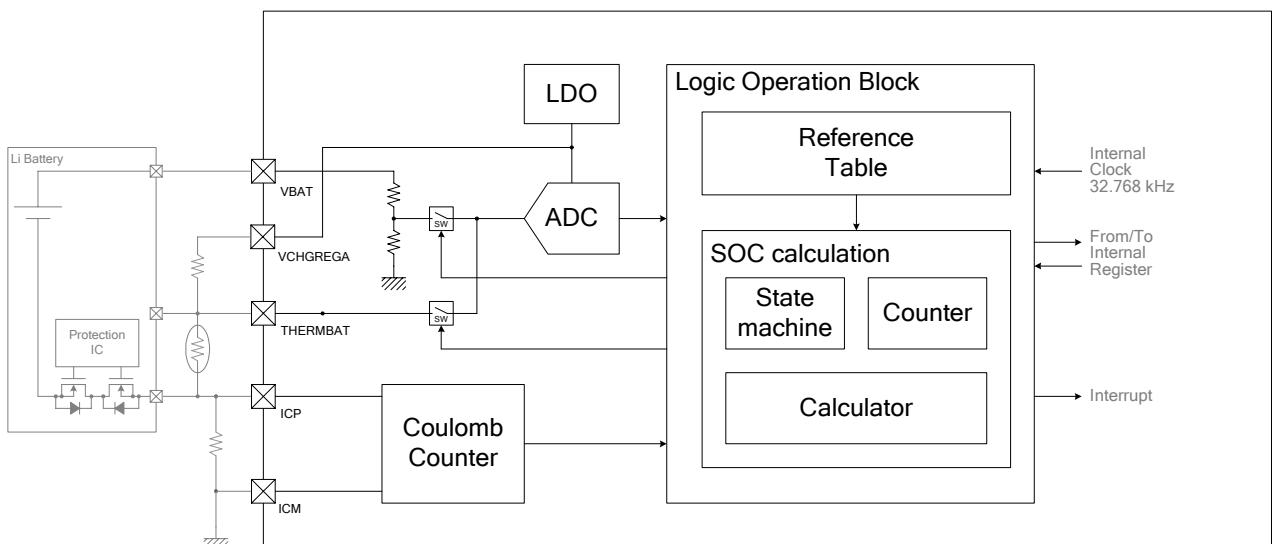

Fig 10-1 Fuel Gauge Block diagram

## 11. ADC

This PMU has 12-bit A/D converter with 8-channel multiplexer.

- The eight inputs are LIMMON, VBAT, VADP, VUSB, VSYS, THERMBAT and two external pins.
- Built in voltage divider (VBAT, VADP, VUSB and VSYS).
- Single-mode / Auto-mode with the average calculation.
- In single-mode, ADC generates the interrupt signal at the end of conversion.
- In auto-mode, the interval of each conversion is programmable.
- In auto-mode, High/Low thresholds for ADC conversion result to generate the interrupt signal.

### 11.1 Block Diagram

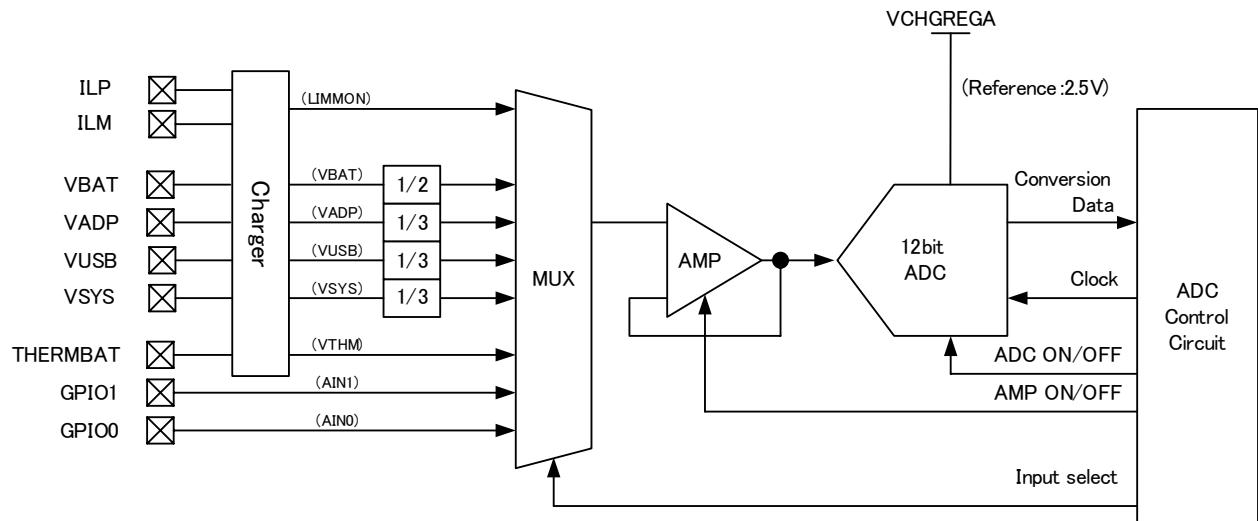

Fig 11-1 ADC Block Diagram

## 12. GPIO

This PMU supports four channels of general purpose input/output.  
GPIO0,1,2,3 pins have the function selected by OTP as shown below.

| Name     | Function                          | Input,*1,*2 | Output,*1,*2 | Power,*3      | GPIO |    |    |    |
|----------|-----------------------------------|-------------|--------------|---------------|------|----|----|----|
|          |                                   |             |              |               | 0    | 1  | 2  | 3  |

| **EXON   | External LDO*/DCDC* on/off input  | N           | -            | VSYS          | *4   | *4 | *4 | *4 |

Note\*1: Explanation of column of “Input” and “Output” :

A : Analog Input/Output.

C : CMOS Input/Output.

N : NMOS Input(VSYS only)/ Nch Open Drain Output.

Note\*2: CMOS or Nch is selectable by OTP.

Note\*3: VSYS or VDDIO is selectable by OTP.

Note\*4: Refer to the chapter of Mode.

Table 12-1 The function of GPIO0-3 pins

## **NOTICE**

1. The products and the product specifications described in this Data Sheet are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to Ricoh sales representatives for the latest information thereon.
2. This Data Sheet may not be copied or otherwise reproduced in whole or in part without prior written consent of Ricoh.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this Data Sheet shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under Ricoh's or any third party's intellectual property rights or any other rights.
5. The products listed in this Data Sheet are intended and designed for use as general electronic components in standard applications (office equipment, computer equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or miss-operation of the product could result in human injury or death (aircraft, space vehicle, nuclear reactor control system, traffic control system, automotive and transportation equipment, combustion equipment, safety devices, life support system etc.) should first contact us.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire-containment feature, and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this Data Sheet.
8. Please contact Ricoh sales representatives should you have any questions or comments concerning the products or the technical information.
