Monolithic Ceramic Capacitors

Monolithic Ceramic Capacitors Lead Type

■ Features

1. The RPE series capacitors have small dimensions, large capacitance, and a capacity volume ratio of 10 micro F/cm cube, close to that of electrolytic capacitors. These do not have polarity.
2. These have excellent frequency characteristics and due to these small internal inductance are suitable for high frequencies.
3. These are not coated with wax so there is no change in their exterior appearance due to the outflow of wax during soldering or solvent during cleansing.
4. These are highly inflammable, having characteristics equivalent to the UL-94V-0 standard.

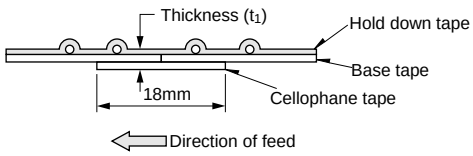
(4) Incidental condition of taping

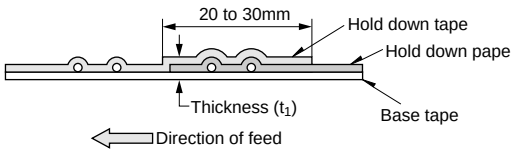
(4)-1 Tape splicing

• If carrier tape has been cut :



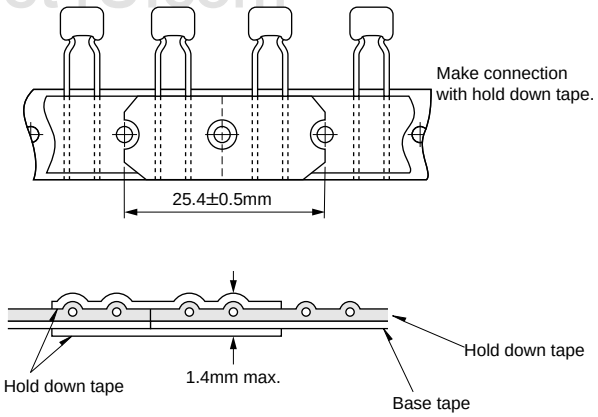
Match the separated base tapes, and connect the back side with cellophane tape.
Ensure that thickness (t_1) does not exceed 1.05mm.

• If hold down tape has been cut :



Overlap the hold down tape. Ensure that thickness (t_1) does not exceed 1.05mm.

• If both hold down tape and base tape have been cut :



* "Minimum Quantity" means the numbers of units of each delivery or order. The quantity should be an integral multiple of the "minimum quantity". (Please note that the actual delivery quantity in a package may change sometimes.)
