

INTRODUCTION

The S1A2206D01 is a monolithic integrated circuit consisting of a 2-channel power amplifier. It is suitable for the stereo and bridge amplifier application of a radio cassette tape recorder.

FEATURES

- High power output
Stereo : $P_O = 2.3 \text{ W (Typ)}$ at $V_{CC} = 9 \text{ V}$, $R_L = 4$
Bridge : $P_O = 4.7 \text{ W (Typ)}$ at $V_{CC} = 9 \text{ V}$, $R_L = 8$
- Low switching distortion at high frequency
- Reduced shock noise at the time of power on/off due to a built-in muting circuit
- Good ripple rejection due to a built-in ripple filter
- Good channel separation
- Soft tone at the time of output saturation
- Closed loop voltage gain fixed at 45dB (Bridge : 51 dB) but availability with external resistor added
- Minimum number of external parts required
- Easy-to-design radiator fin
