# 1. Technical Specifications, Connections, and Chassis Overview

**Index of this chapter:**

- 1.1 PDP Overview
- 1.2 Serial Numbers
- 1.3 Chassis Overview

**Notes:**

- Figures can deviate due to the different model executions.
- Specifications are indicative (subject to change).

## 1.1 PDP Overview

**Table 1-1 PDP overview**

	PDP Type/Version	Model Name	H x V Pixel
1	37" SD v4	S37SD-YD02	852 x 480
2	42" SD v2	S42SD-YD06	852 x 480
3	42" SD v3	S42SD-YD05	852 x 480
4	42" SD v4	S42SD-YD07	852 x 480
5	42" HD v3	S42AX-XD02	1024 x 768
6	42" HD v4	S42AX-YD01	1024 x 768
7	50" HD v3	S50HW-XD03	1366 x 768
8	50" HD v4	S50HW-XD04	1366 x 768

50" HD v4	50PF9967D/10	FTP2.4E_AB	3122 785 15740

In above table the link is given between the SDI Plasma Display Panel and the Philips TV chassis (incl. chassis manual no.).

### 1.1.1 37" SD v4

**Figure 1-1 External view (37" SD v4)**

**Figure 1-2 Points of screw mount (37" SD v4)**

No	Item	Specification 37" SD v4
1	Pixel	852 (H) x 480 (V) pixels (1 pixel = 1 R,G,B cells)
2	Number of Cells	2556 (H) x 480 (V)
3	Pixel Pitch	0.960 mm (H) x 0.960 mm (V)
4	Cell Pitch	R 0.320 (H) mm 0.960 (V) mm
		G 0.320 (H) mm 0.960 (V) mm
		B 0.320 (H) mm 0.960 (V) mm
5	Display size	817.92 (H) x 460.80 mm (V)
6	Screen size	Diagonal 37" Colour Plasma Display Module
7	Screen aspect	16:9
8	Display colour	16.77 million colours
9	Viewing angle	Over 160 deg (angle with 50% and greater brightness perpendicular to PDP module)
10	Dimensions	982 (W) x 582 (H) x 52.9 (D) mm
11	Weight	Module 1 About 15.5 kg
12	Broadc. reception Vertical frequency Video/Logic Interface	60/50 Hz, LVDS

1.1.2 42" SD v2

Figure 1-4 Points of screw mount (42" SD v2)

No	Item	Specification 42" SD v2
1	Pixel	852 (H) x 480 (V) pixels (1 pixel = 1 R,G,B cells)
2	Number of Cells	2556 (H) x 480 (V)
3	Pixel Pitch	1.095 mm (H) x 1.110 mm (V)
4	Cell Pitch	R 0.324 (H) mm 1.110 (V) mm
		G 0.365 (H) mm 1.110 (V) mm
		B 0.406 (H) mm 1.110 (V) mm
5	Display size	932.940 (H) x 532.800(V) mm
6	Screen size	Diagonal 42" Colour Plasma Display Module
7	Screen aspect	16:9
8	Display colour	16.77 million colours
9	Viewing angle	Over 160 deg (angle with 50% and greater brightness perpendicular to PDP module)
10	Dimensions	982 (W) x 582 (H) x 52.9 (D) mm
11	Weight	Module 1   About 16.6 kg
12	Broadc. reception Vertical frequency Video/Logic Interface	60/50 Hz, LVDS

1.1.3 42" SD v3

Figure 1-5 External view (42" SD v3)

Figure 1-6 Points of screw mount (42" SD v3)

No	Item	Specification 42" SD v3
1	Pixel	852 (H) x 480 (V) pixels (1 pixel = 1 R,G,B cells)
2	Number of Cells	2556 (H) x 480 (V)
3	Pixel Pitch	1.095 mm (H) x 1.110 mm (V)
4	Cell Pitch	R 0.365 (H) mm 1.110 (V) mm
		G 0.365 (H) mm 1.110 (V) mm
		B 0.365 (H) mm 1.110 (V) mm
5	Display size	932.940 (H) x 532.800(V) mm
6	Screen size	Diagonal 42" Colour Plasma Display Module
7	Screen aspect	16:9
8	Display colour	16.77 million colours
9	Viewing angle	Over 160 deg (angle with 50% and greater brightness perpendicular to PDP module)
10	Dimensions	982 (W) x 582 (H) x 52.9 (D) mm
11	Weight	Module 1   About 16.6 kg
12	Broadc. reception Vertical frequency Video/Logic Interface	60/50 Hz, LVDS

1.1.4 42" SD v4

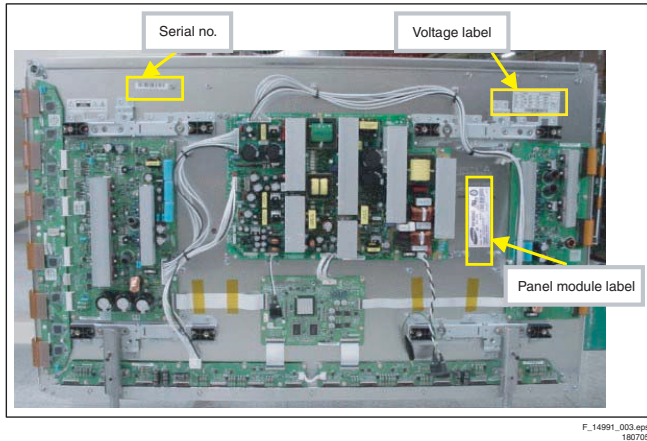

Figure 1-7 External view (42" SD v4)

Figure 1-8 Points of screw mount (42" SD v4)

No	Item	Specification 42" SD v4	
1	Pixel	852 (H) x 480 (V) pixels (1 pixel = 1 R,G,B cells)	
2	Number of Cells	2556 (H) x 480 (V)	
3	Pixel Pitch	1.095 (H) mm x 1.110 (V) mm	
4	Cell Pitch	R	0.365 (H) mm x 1.110 (V) mm
		G	0.365 (H) mm x 1.110 (V) mm
		B	0.365 (H) mm x 1.110 (V) mm
5	Display size	932.940 (H) x 532.800(V) mm	
6	Screen size	Diagonal 42" Colour Plasma Display Module	
7	Screen aspect	16:9	
8	Display colour	16.77 million colours	
9	Viewing angle	Over 160 deg (angle with 50% and greater brightness perpendicular to PDP module)	
10	Dimensions	982 (W) x 582 (H) x 54 (D) mm	
11	Weight	Module 1	About 15.4 kg
14	Broadc. reception Vertical frequency Video/Logic Interface	60 Hz/ 50 Hz, LVDS	

1.1.5 42" HD v3

Figure 1-9 External view (42" HD v3)

Figure 1-10 Points of screw mount (42" HD v3)

No	Item	Specification 42" HD v3	
1	Pixel	1.024 (H) x 768 (V) pixels (1 pixel = 1 R,G,B cells)	
2	Number of Cells	3072 (H) x 768 (V)	
3	Pixel Pitch	0.912mm (H) x 0.693mm (V)	
4	Cell Pitch	R	Horizontal 0.304 mm Vertical 0.693 mm
		G	Horizontal 0.304 mm Vertical 0.693 mm
		B	Horizontal 0.304 mm Vertical 0.693 mm
5	Display size	932.940 (H) x 532.800(V) mm	
6	Screen size	Diagonal 42" Colour Plasma Display Module	
7	Screen aspect	16:9	
8	Display colour	16.77 million colours	
9	Viewing angle	Over 160 deg (angle with 50% and greater brightness perpendicular to PDP module)	
10	Dimensions	982 (W) x 582 (H) x 52.9 (D) mm	
11	Weight	Module 1	About 18.0 kg
12	Broadc. reception Vertical frequency Video/Logic Interface	60/50 Hz, LVDS	

1.1.6 42" HD v4

Figure 1-11 External view (42" HD v4)

Figure 1-12 Points of screw mount (42" HD v4)

No	Item	Specification 42" HD v4	
1	Pixel	1.024 (H) x 768 (V) pixels (1 pixel = 1 R,G,B cells)	
2	Number of Cells	3072 (H) x 768 (V)	
3	Pixel Pitch	0.912mm (H) x 1.110mm (V)	
4	Cell Pitch	R	Horizontal 0.304 mm Vertical 0.693 mm
		G	Horizontal 0.304 mm Vertical 0.693 mm
		B	Horizontal 0.304 mm Vertical 0.693 mm
5	Display size	933.98 (H) x 532.220(V) mm	
6	Screen size	Diagonal 42" Colour Plasma Display Module	
7	Screen aspect	16:9	
8	Display colour	16.77 million colours (8-bit)	
9	Viewing angle	Over 160 deg (angle with 50% and greater brightness perpendicular to PDP module)	
10	Dimensions	1000 (W) x 598 (H) x 64.4 (D) mm	
11	Weight	Module 1	About 20.0 kg
12	Broadc. reception Vertical frequency Video/Logic Interface	60/50 Hz, LVDS	

1.1.7 50" HD v3

Figure 1-13 External view (50" HD v3)

Figure 1-14 Points of screw mount (50" HD v3)

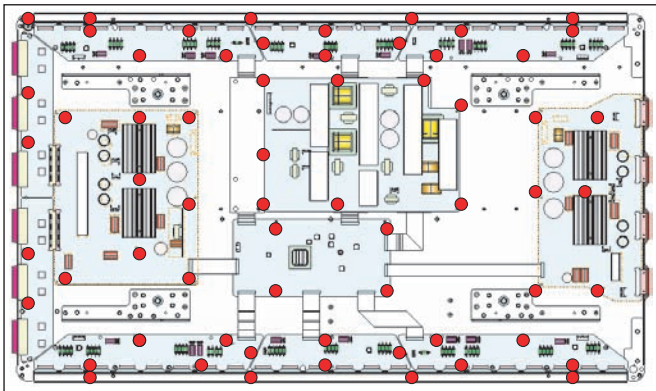

No	Item	Specification 50" HD v3	
1	Pixel	1366 (H) x 768 (V) pixels (1 pixel = 1 R,G,B cells)	
2	Number of Cells	4,098 (H) x 768 (V) cells	
3	Pixel Pitch	0.810mm (H) mm x 0.810 mm (V)	
4	Cell Pitch	R	Horizontal 0.270mm Vertical 0.810mm
		G	Horizontal 0.270mm Vertical 0.810mm
		B	Horizontal 0.270mm Vertical 0.810mm
5	Display size	1106.46 mm (H) x 622.08 mm (H)	
6	Screen size	Diagonal 50" Colour Plasma Display Module	
7	Screen aspect	16:9	
8	Display colour	16.77 million colours	
9	Viewing angle	Over 160 deg (angle with 50% and greater brightness perpendicular to PDP module)	
10	Dimensions	1184 (W) x 700 (H) x 60.1 (D) mm	
11	Weight	Module 1	About 18.0 kg
12	Broadc. reception Vertical frequency Video/Logic Interface	60/50 Hz, LVDS

## 2. Safety Instructions, Warnings, and Notes

### Index of this chapter:

- 2.1 Handling Precautions
- 2.2 Safety Precautions
- 2.3 Notes

### Notes:

- Only authorised persons should perform servicing of this module.
- When using/handling this unit, pay special attention to the PDP Module: it should not be enforced into any other way than next rules, warnings, and/or cautions.
- **"Warning"** indicates a hazard that may lead to death or injury if the warning is ignored and the product is handled incorrectly.
- **"Caution"** indicates a hazard that can lead to injury or damage to property if the caution is ignored and the product is handled incorrectly.

### 2.1 Handling Precautions

- The PDP module use high voltage that is dangerous to humans. Before operating the PDP, always check for dust to prevent short circuits. Be careful touching the circuit device when power is "on".
- The PDP module is sensitive to dust and humidity. Therefore, assembling and disassembling must be done in no dust place.
- The PDP module has a lot of electric devices. The service engineer must wear equipment (for example, earth ring) to prevent electric shock and working clothes to prevent electrostatic.
- The PDP module use a fine pitch connector which is only working by exactly connecting with flat cable. The operator must pay attention to a complete connection when connector is reconnected after repairing.
- The capacitor's remaining voltage in the PDP module's circuit board temporarily remains after power is "off". Operator must wait for discharging of remaining voltage during at least 1 minute.

### 2.2 Safety Precautions

#### 2.2.1 Safety Precautions

- Before replacing a board, discharge forcibly.
- The remaining electricity from board.
- When connecting FFC and TCPs to the module, recheck that they are perfectly connected.
- To prevent electrical shock, be careful not to touch leads during circuit operations.
- To prevent the Logic circuit from being damaged due to wrong working, do not connect/disconnect signal cables during circuit operations.
- Do thoroughly adjustment of a voltage label and voltage-insulation.
- Before reinstalling the chassis and the chassis assembly, be sure to use all protective stuff including a nonmetal controlling handle and the covering of partitioning type.
- Caution for design change: Do not install any additional devices to the module, and do not change the electrical circuit design.
- For example: Do not insert a subsidiary audio or video connector. If you insert it, it cause danger on safety. And, if you change the design or insert, manufacturer guarantee will be not effect.
- If any parts of wire is overheats of damaged, replace it with a new specified one immediately, and identify the cause of the problem and remove the possible dangerous factors.
- Examine carefully the cable status if it is twisted or damaged or displaced. Do not change the space between

parts and circuit board. Check the cord of AC power preparing damage.

- Product Safety Mark: Some of electric or implement material have special characteristics invisible that was related on safety. In case of the parts are changed with new one, even though the Voltage and Watt is higher than before, the Safety and Protection function will be lost.
- The AC power always should be turned "off", before next repair.
- Check assembly condition of screw, parts and wire arrangement after repairing. Check whether the material around the parts get damaged.

#### 2.2.2 ESD Precautions

There are parts, which are easily damaged by electrostatics (for example Integrated Circuits, FETs, etc.) Electrostatic damage rate of product will be reduced by the following technics:

- Before handling semiconductor parts/assembly, must remove positive electric by ground connection, or must wear the antistatic wrist-belt and ring (it must be operated after removing dust on it. It comes under precaution of electric shock).
- After removing the assembly, lay it with the tracks on a conductive surface to prevent charging.
- Do not use chemical stuff containing Freon. It generates positive electric that can damage ESD sensitive devices.
- You must use a soldering device for ground-tip when soldering or de-soldering these devices.
- You must use anti-static solder removal device. Most removal devices do not have antistatic which can charge a enough positive electric enough for damaging these devices.
- Before removing the protective material from the lead of a new device, bring the protective material into contact with the chassis or assembly.
- When handing an unpacked device for replacement, do not move around too much. Moving (legs on the carpet, for example) generates enough electrostatic to damage the device.
- Do not take a new device from the protective case until the it is ready to be installed. Most devices have a lead, which is easily short-circuited by conductive materials (such as conductive foam and aluminium)

### 2.3 Notes

A glass plate is positioned before the plasma display. This glass plate can be cleaned with a slightly humid cloth. If due to circumstances there is some dirt between the glass plate and the plasma display panel, it is recommended to do some maintenance by a qualified service employee only.

#### 2.3.1 Safe PDP Handling

- The work procedures shown with the "Note" indication are important for ensuring the safety of the product and the servicing work. Be sure to follow these instructions.
- Before starting the work, secure a sufficient working space.
- At all times, other than when adjusting and checking the product, be sure to turn "off" the main POWER switch and disconnect the power cable from the power source of the display (jig or the display itself) during servicing.
- To prevent electric shock and breakage of PWBs, start the servicing work at least 30 seconds after the main power has been turned "off". Especially when installing and removing the Power Supply PWB and the SUS PWB in which high voltages are applied, start servicing at least 2 minutes after the main power has been turned "off".

- While the main power is “on”, do not touch any parts or circuits other than the ones specified. The high voltage Power Supply block within the PDP module has a floating ground. If any connection other than the one specified is made between the measuring equipment and the high voltage power supply block, it can result in electric shock or activation of the leakage-detection circuit breaker.
- When installing the PDP module in, and removing it from the packing carton, be sure to have at least two persons perform the work while being careful to ensure that the flexible printed-circuit cable of the PDP module does not get caught by the packing carton.
- When the surface of the panel comes into contact with the cushioning materials, be sure to confirm that there is no foreign matter on top of the cushioning materials before the surface of the panel comes into contact with the cushioning materials. Failure to observe this precaution may result in, the surface of the panel being scratched by foreign matter.
- When handling the circuit PWB, be sure to remove static electricity from your body before handling the circuit PWB.
- Be sure to handle the circuit PWB by holding the large parts as the heat sink or transformer. Failure to observe this precaution may result in the occurrence of an abnormality in the soldered areas.
- Do not stack the circuit PWB. Failure to observe this precaution may result in problems resulting from scratches on the parts, the deformation of parts, and short-circuits due to residual electric charge.
- Routing of the wires and fixing them in position must be done in accordance with the original routing and fixing configuration when servicing is completed. All the wires are routed far away from the areas that become hot (such as the heat sink). These wires are fixed in position with the wire clamps so that the wires do not move, thereby ensuring that they are not damaged and their materials do not deteriorate over long periods of time. Therefore, route the cables and fix the cables to the original position and states using the wire clamps.
- Perform a safety check when servicing is completed. Verify that the peripherals of the serviced points have not undergone any deterioration during servicing. Also verify that the screws, parts and cables removed for servicing purposes have all been returned to their proper locations in accordance with the original

### 3. Directions For Use

Not applicable.

## 4. Mechanical Instructions

### Index of this chapter:

- 4.1 Dis-assembling / Re-assembling
- 4.1.1 Flexible Printed Circuit of Y-Buffer (Upper and Lower)
- 4.1.2 Flat Cable Connector of X-main Board
- 4.1.3 FFC and TCP from Connector
- 4.1.4 Exchange of LBE, LBF, LBG board
- 4.1.5 Exchange YBU, YBL and YM board

### 4.1 Dis-assembling / Re-assembling

#### 4.1.1 Flexible Printed Circuit of Y-Buffer (Upper and Lower)

- Dis-assembly: Pull out the FPC from the connector by holding the lead of the FPC with both hands.
- Re-assembly: Push the lead of FPC with same force on both sides into the connector.

**Note:** Be careful do not to damage the connector pin during connecting.

Figure 4-1 Dis-assembly FPC of Y-buffer

Figure 4-2 Re-assembly FPC of Y-buffer

#### 4.1.2 Flat Cable Connector of X-main Board

- Dis-assembly:
  1. Pull out the clamp of connector.
  2. Pull Flat cable out press down lightly.
  3. Turn the Flat Cable reversely.
- Re-assembly: Put the Flat Cable into the connector press down lightly until locking sound ("Click") comes out.

Figure 4-3 Dis-assembly FCC of X-main board

Figure 4-4 Re-assembly FCC of X-main board

### 4.1.3 FFC and TCP from Connector

- Dis-assembly of TCP:
  1. Open the clamp carefully.
  2. Pull the TCP out from its connector.
- Re-assembly of TCP:
  1. Put the TCP into the connector carefully
  2. Close the clamp completely (until "Click" comes out.).

#### Notes:

- Checking whether the foreign material is on the connector inside before assembling of TCP.
- Be careful, do not damage the board by ESD during handling of TCP.

Figure 4-5 Dis-assembly of TCP

Figure 4-6 Re-assembly of TCP

Figure 4-7 Mis-assembly of TCP

The procedure of assembling and disassembling of FFC is same as TCP

Figure 4-8 Dis- and re-assembly of FFC

#### 4.1.4 Exchange of LBE, LBF, LBG board

1. Depending on the model (see "Photo 2" per model.):
  - **42" SD v3** - Remove the screws in order of 2-3-5-7-1-4-6 (and 10-11-13-16-9-12-14 for HD) from heat sink and then remove heat sink (Photo 1).
  - **42" SD v4** - Remove the screws in order of 2-4-1-5-3 from heat sink and then remove heat sink (Photo 1).
  - **42" HD v3, 37" SD v4, 50" HD v3** - Remove the screws in order of "Centre - Left Side - Right Side" from heat sink and then get rid of heat sink (Photo 1).
  - **50" HD v4** - Remove the screws in order of 2-3-1-4 from heat sink and then remove heat sink (Photo 1).
2. Remove the TPC, FFC, and power cable from the connectors.
3. Remove all the screws from the defective board.
4. Remove the defected board.  
**Note:** When replacing the Logic board or Y-main board for a lead-free (Pb-free) board, always replace them together. (this is **only** valid for the 37" SD v4 displays!)
5. Replace the new board and then screw tightly.
6. Clean the connectors.
7. Re-connect the TCP, FFC, and power cable to the connector.
8. Re-assemble the TCP heat sink. Use the same screw mounting order as described above

**Caution:** If you screw too tight, it is possible to damage the Driver IC of the TCP.

Figure 4-16 Photo 2 - 50" HD v4

#### 4.1.5 Exchange YBU, YBL and YM board

1. Separate all the FPC connectors of YBU (Y-Buffer upper) and YBL (Y-Buffer lower). See "Photo 1".
  2. Separate all the connector of CN5001 and CN5008 from Y-Main. See "Photo 2".
  3. Loosen all the screws of YBU, YBL, and YM. See "Photo 3".
  4. Remove the board from chassis.
  5. Remove the connector of CN5006 and CN5007 among YBU, YBL and YM.
  6. Remove the YBL and YBU from Y-main.
  7. Remove the defected board.
- Note:** When replacing the Logic board or Y-main board for a lead-free (Pb-free) board, always replace them together. (this is **only** valid for the 37" SD v4 displays!)
8. Re-assemble the YBU and YBL to the Y-Main.
  9. Connect the connector of CN5006 and CN5007 among YBU, YBL and YM. See "Photo 4".
  10. Arrange the board on the chassis and then screw to fix.
  11. Connect the FPC and YM of panel to the connector. See "Photo 5".
  12. Supply the electric power to the module and then check the waveform of the board.
  13. Turn "off" the power after the waveform is adjusted.

Figure 4-17 Photo 1, 2, and 3: Dis-assembly of YBU, YBL, and YM

Figure 4-18 Photo 4 and 5: Re-assembly of YBU, YBL, and YM

# 5. Service Modes, Error Codes, and Fault Finding

**Index of this chapter:**

- 5.1 Repair Tools
- 5.2 Fault Finding
- 5.3 Defect Description Form

## 5.1 Repair Tools

### 5.1.1 ComPair

For the v3 and v4 models, it will be possible to generate test patterns with ComPair. The ComPair interface must be connected to the Logic Board with the special interconnection cable (see table below for the order code).

### 5.1.2 Other Service Tools

**Table 5-1 Overview Service tools**

Service Tools	Order Code
Jumper J8002 + V2 JIG connector kit	3122 785 90760
V3 JIG connector + for SDI panel repair	3122 785 90770
Jumper J8002 to be used in connector kit	3122 785 90780
V2 JIG connector to be used in conn. kit	3122 785 90790
ComPair / SDI interconnection cable	3122 785 90800
Foam buffers (2 pcs.)	3122 785 90581

6.2.2 PSU 42" SD v2

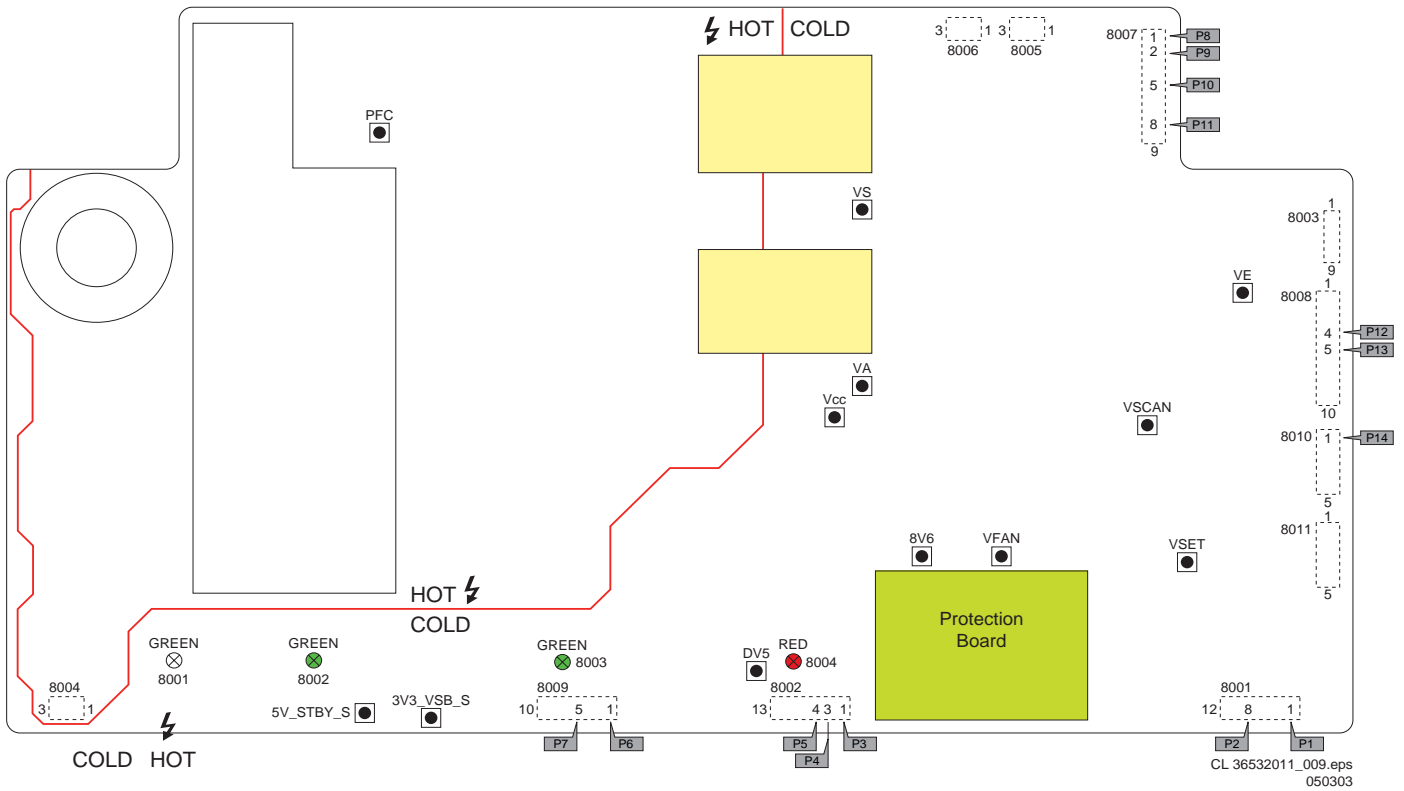

Figure 6-10 PSU layout

Table 6-2 Adjustment voltage level overview

No	Output voltage (V)	Voltage Setting (Nominal Load)	Output Voltage Variable Point
1	Vs	87V	78V ~ 92V
2	Va	79V	72V ~ 86V
3	Ve	107V	100V ~ 120V
4	Vset	93V	75V ~ 95V
5	Vscan	79V	65V ~ 85V
6	Vg	15V	Fixed
7	D5V	5.2V	5V ~ 5.6V
8	D3V3	3.3V	2.8V ~ 3.7V
Check voltage label on the PDP for correct values.			

6.2.3 PSU 42" SD v3

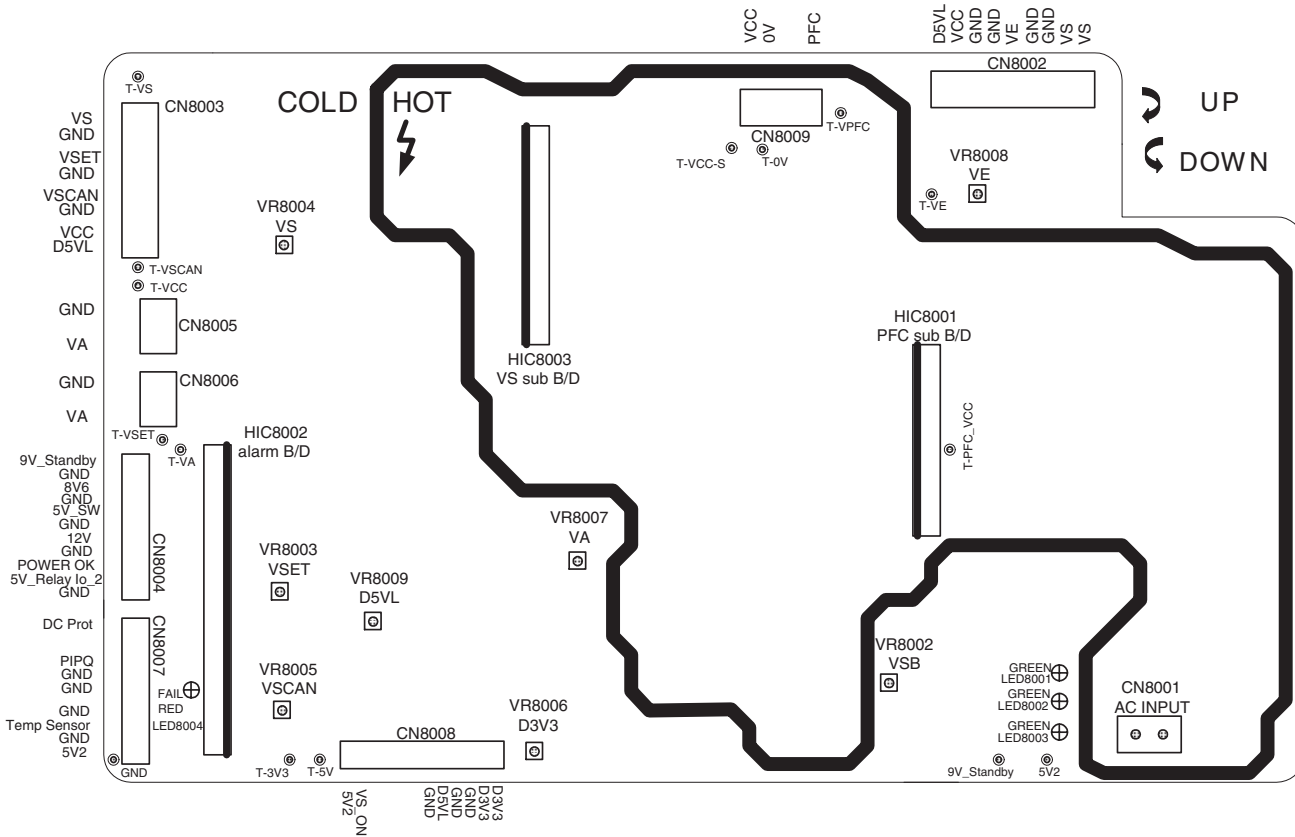

Figure 6-11 PSU layout

Table 6-3 Adjustment voltage level overview

No	Output voltage (V)	Voltage Setting (Nominal Load)	Output Voltage Variable Point
1	Vs	175V	160V ~ 185V
2	Va	70V	65V ~ 80V
3	Ve	160V	150V ~ 170V
4	Vset	173V	160V ~ 18095V
5	Vscan	-60V	-55V ~ -75V
6	D5VL	5.2V	4.0V ~ 6V
7	D3V3	3.3V	5V ~ 5.6V
8	Vcc	15V	Fixed
Check voltage label on the PDP for correct values.			

6.2.4 PSU 42" SD v4

Figure 6-12 PSU layout

Table 6-4 Adjustment voltage level overview

No	Output voltage (V)	Voltage Setting (Normal Load)	Output Voltage Variable Point
1	VS	207V ± 1%	195V ~ 215V
2	VA	70V ± 1.5%	50V ~ 70V
3	VE	110V ± 1.5%	70V ~ 110V
4	VSET	198V ± 1.5%	180V ~ 210V
5	VSCAN	-185V ± 1.5%	-170V ~ -190V
6	VSB	5V ± 5%	Fixed
7	VG	15V ± 5%	Fixed
8	D5VL	5.2V ± 5%	Fixed
9	D3V3	3.3V ± 5%	Fixed

Check voltage label on the PDP for correct values.

6.2.6 PSU 42" HD v4

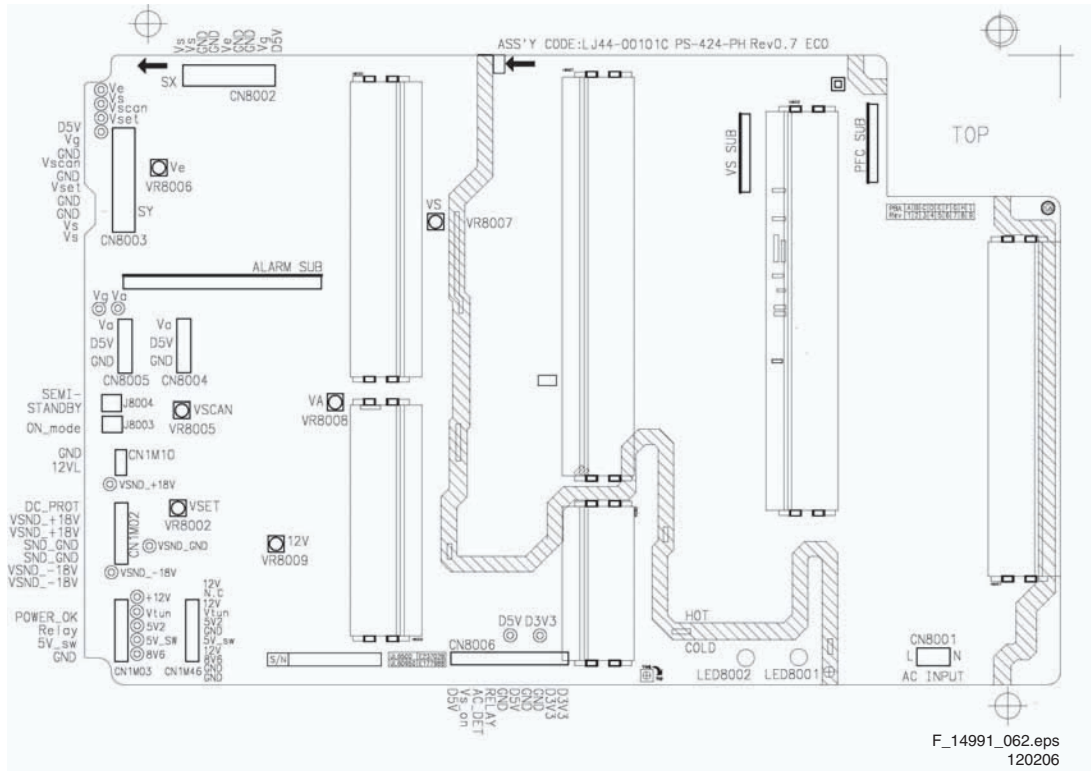

Figure 6-14 PSU layout

Table 6-6 Adjustment voltage level overview

No	Output voltage (V)	Voltage Setting (Normal Load)	Output Voltage Variable Point
1	Vs	208V	190V ~ 210V
2	Va	70V	50V ~ 70V
3	Ve	90V	80V ~ 105V
4	Vset	195V	180V ~ 205V
5	Vscan	-190V	-170V ~ -205V
6	Vsb	5V	Fixed
7	Vg	15V	Fixed
8	D5VL	5.2V	Fixed
9	D3V3	3.3V	Fixed

Check voltage label on the PDP for correct values.

6.2.7 PSU 50" HD v3

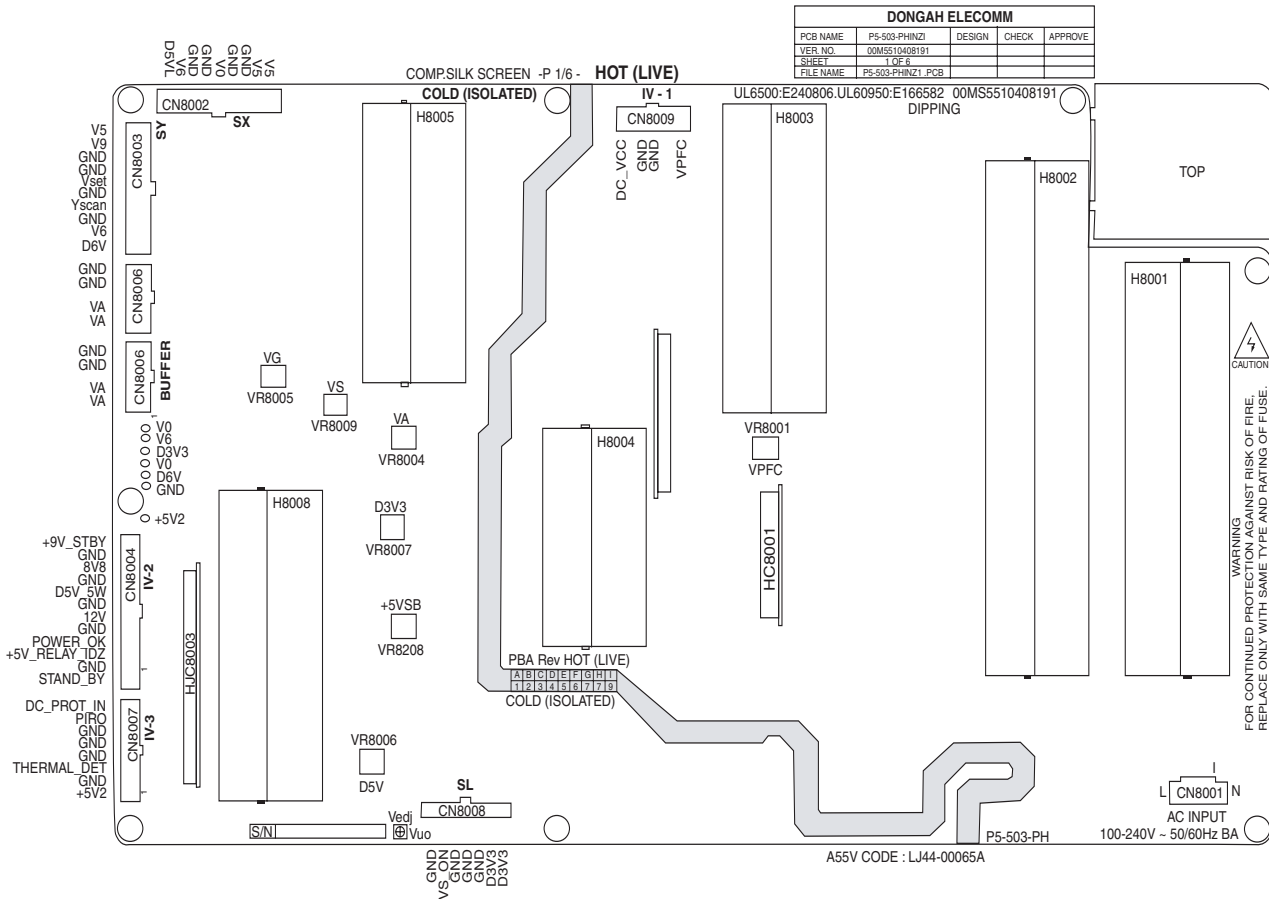

Figure 6-15 PSU layout

Table 6-7 Adjustment voltage level overview

No	Output voltage (V)	Voltage Setting (Normal Load)	Output Voltage Variable Point
1	PFC	385V ± 2V	370V ~ 400V
2	VS	175V ± 1%	160V ~ 185V
3	VA	70V ± 1%	65V ~ 80V
4	VE	160V ± 2%	150V ~ 170V
5	VSET	173V ± 2%	160V ~ 180V
6	VSCAN	-60V ± 2%	-55V ~ -75V
7	D5VL	5.2V ± 2%	4.0V ~ 6.0V
8	D3V3	3.3V ± 2%	2.8V ~ 4.0V
9	VCC	15V ± 5%	Fixed
10	5V2	5.4V ± 3%	3.5V ~ 6.0V
11	9V_Standby	8.5V ~ 9.5V	Fixed

Check voltage label on the PDP for correct values.

# 8. Alignments

**Index of this chapter:**

- 8.1 Alignments 37" SD v4
- 8.2 Alignments 42" SD v2
- 8.3 Alignments 42" SD v3
- 8.4 Alignments 42" HD v3
- 8.6 Alignments 42" HD v4
- 8.7 Alignments 50" HD v3
- 8.8 Alignments 50" HD v4
- 8.9 Alignment value overview (all screens)

**Note:**

- Figures can deviate due to the different model executions.

**Important:** Remove all non-default jumpers and reset all DIP switches, after the repair!

## 8.1 Alignments 37" SD v4

1. Set the pattern to Full White (place jumper CN2008 on the Logic Board).
2. Set Vsch (see Figure "Test point location LJ92-0102A") to -38V (see Figure "Waveform adjustment (Y-Board)"). Check with a digital multimeter, connected between the Y-scan test point and ground. Adjust the voltage with VR5000.
3. Check the waveform using an Oscilloscope.
  - Triggering through V\_TOGG of the LOGIC Board (see Figure "Logic PWB").
  - Connect the "ODD" test point, located at the centre of Y\_buffer (see Figure "Potentiometer locations LJ92-01149A"), to the other channel, and then check the first Subfield waveform of one TV-Field.
  - Check the waveform by adjusting Horizontal Division of the oscilloscope.
4. Adjust the flat time of the rising ramp of the 1st subframe to 40 μS with VR5001 (see Figure "Rising ramp flat time adjustment").

5. Adjust the flat time of the falling ramp of the 1st subframe to 16 μS with VR5002 (see Figure "Falling ramp flat time adjustment").
  - This is a difficult adjustment.
  - It is easier and more accurate to do the following:
    - Count 3 pulses between A and B;
    - Set the difference between A and B to 40 V; the time between C and D will then automatically be set to approximately 16 μS
    - Settings of the oscilloscope: vertically 20VDC/div, horizontally 10 μS/div.
6. Check with the oscilloscope if the voltage of Vsch is -38 V (see Figure "Y-scan H waveform").

**Special notice:** It is very important, that you execute this adjustment on the 1st Sub-Field (SF) of the 1st Frame of the Reset waveform and then move to the 3rd Sub-field for adjusting.

## 8.2 Alignments 42" SD v2

## 1) Preparation

- 1 Insert jumper J8002 on PSU board
- 2 Connect the Jig connector switch
- 3 Put the Logic board dipswitches into internal mode, to generate a Full White screen

- 4 Connect the AC power jig

Connect the Oscilloscope:

- 5 CH1: V-SYNC (CN201)
- 6 CH2: Y-output (OUT4)
- 7 CH3: X-output (TP OUT)
- 8 Connect the Key-scan Board

## 2) Turn-On.

- Turn on the Power switch
- Check the LED on the Logic Board
- Check waveform of X- and Y-board (Refer to Picture below)

Figure 8-10 Adjusting procedure (42" SD v2)

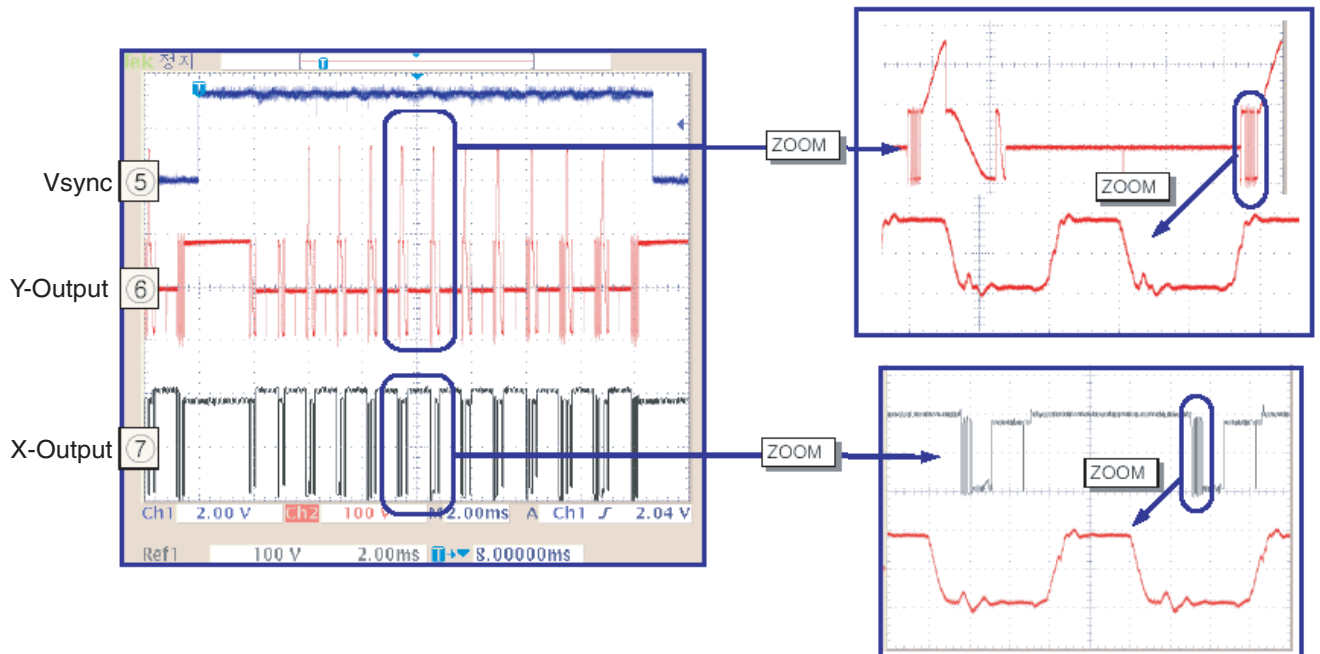

Figure 8-11 Waveform of X- and Y-board (42" SD v2)

Figure 8-12 How to adjust the waveform (42" SD v2)

### 8.3 Alignments 42" SD v3

1. Put the dipswitches on the Logic Board in the internal position to get a Full White Pattern.
2. You can find the location of the test point and potentiometers in Figure "Potentiometer locations".
3. Adjust  $V_{sch}$  to 40 V with VR5004.
4. Check the waveform with an Oscilloscope.
  - Take the trigger signal from the testpoint marked "V-sync" on the Logic Board.
  - Connect the testpoint marked "OUT 4", located in the centre of Y\_buffer Board to the other channel, and then check the first Subfield operating waveform of one TV-Field.
  - Check the waveform again after adjusting Horizontal Division. Check the Reset waveform when the V\_TOGG Level is changed.
  - Set the  $V_{set}$  to  $10\mu s$  by adjusting VR5002.
  - Set the Falling maintenance time to  $30\mu s$  by adjusting VR5003.
  - Change the waveform position of Oscilloscope to the 3rd Subfield and then set the Falling maintenance time to  $30\mu s$  by adjusting the VR5001. GND maintenance section should be checked after the Vertical Division is readjusted to '2 V or 5 V'.

Reset waveform and then move to the 3rd Sub-field for adjusting.

Figure 8-13 DIP switch mode: External

Figure 8-14 DIP switch mode: Internal

**Special notice:** It is very important, that you execute this adjustment on the 1st Sub-Field (SF) of the 1st Frame of the

8.4 Alignments 42" HD v3

1. Put the dipswitches on the Logic Board in the internal position to get a Full White Pattern.
2. Adjust Vsch to Clock-wise max by using VR5004 (Vsch should be connected to "+" unit of DMM).
3. Check the waveform using Oscilloscope.
  - Triggering through V\_TOGG of LOGIC Board.
  - Connect the OUT 4 Test Point at the centre of Y\_buffer to other channel, and then check the first Subfield operating waveform of one TV-Field.
  - Check the waveform again after adjusting Horizontal Division. Check the Reset waveform when the V\_TOGG Level is changed.
  - Set the Vset to 20  $\mu$ s by adjusting VR5002. GND maintenance section should be checked after the Vertical Division is readjusted to '2 V or 5 V'.
  - Set the Falling maintenance time to 20  $\mu$ s by adjusting VR5006.
  - Change the waveform position of Oscilloscope to the 3rd Subfield and then set the Falling maintenance time to 10 $\mu$ s by adjusting the VR5003. GND maintenance section should be checked after the Vertical Division is readjusted to '2 V or 5 V'.

Reset waveform and then move to the 3rd Sub-field for adjusting.

Figure 8-21 DIP switch mode: External

## 8.7 Alignments 50" HD v3

- Put the dipswitches on the Logic Board in the internal position to get a Full White Pattern (see Figure "DIP switch positions").
- Adjust  $V_{sch}$  to 25 V by using VR5901\_VSC\_h ( $V_{sch\_h}$  should be connected to "+" unit of DMM).
- Check the waveform using Oscilloscope.
  - Triggering through V\_TOGG of LOGIC Board.
  - Connect the OUT 4 Test Point at the centre of Y\_buffer to other channel, and then check the first Subfield operating waveform of one TV-Field.
  - Check the waveform again after adjusting Horizontal Division. Check the Reset waveform when the V\_TOGG Level is changed.
  - Set the Rising Ramp Flat Time to 50  $\mu$ s by adjusting VR5000. GND maintenance section should be

checked after the Vertical Division is readjusted to '2 V or 5 V'.

- Set the Falling maintenance time to 35  $\mu$ s by adjusting VR5001.
- Change the waveform position of Oscilloscope to the 3rd Subfield and then set the Falling maintenance time to 20  $\mu$ s by adjusting the VR5002.
- GND maintenance section should be checked after the Vertical Division is readjusted to '2 V or 5 V'.

**Special notice:** When you adjust the inclination of waveform, do check and adjustment being based on the Reset waveform of 1st Sub-field of 1st Frame and then move to 3rd Sub-field for adjusting.

## 9. Circuit Descriptions, Abbreviation List, and IC Data Sheets

### Index of this chapter:

- 9.1 Main function of Each Assembly
- 9.2 Abbreviation List
- 9.3 IC Data Sheets

### 9.1 Main function of Each Assembly

#### 9.1.1 X Main Board

The X Main board generates a drive signal by switching the FET in synchronization with logic main board timing, and supplies the X electrode of the panel with the drive signal through the connector.

1. Maintain voltage waveforms (including ERC).
2. Generate X rising ramp signal.
3. Maintain  $V_e$  bias between Scan intervals.

#### 9.1.2 Y Main Board

The Y Main board generates a drive signal by switching the FET in synchronization with the logic Main Board timing and sequential supplies the Y electrode of the panel with the drive signal through the scan driver IC on the Y-buffer board. This board connected to the panel's Y terminal has the following main functions.

1. Maintain voltage waveforms (including ERC).
2. Generate Y-rising Falling Ramp.
3. Maintain V scan bias.

#### 9.1.3 Logic Main Board

The Logic Main board generates and outputs the address drive output signal and the X,Y drive signal by processing the video signals. This Board buffers the address drive output signal and feeds it to the address drive IC (COF module, video signal- X Y drive signal generation, frame memory circuit / address data rearrangement).

#### 9.1.4 Logic Buffer (E, F)

The Logic Buffer transmits data signal and control signal.

#### 9.1.5 Y Buffer Board (Upper, Lower)

The Y Buffer board consisting of the upper and lower boards supplies the Y-terminal with scan waveforms. The board comprises eight scan driver ICs (ST microelectronics STV 7617: 64 or 65 output pins), but four ICs for the SD class.

#### 9.1.6 AC Noise Filter

The AC Noise filter has function for removing noise (low frequency) and blocking surge. It affects safety standards (EMC, EMI).

#### 9.1.7 TCP (Tape Carrier Package)

The TCP applies the  $V_a$  pulse to the address electrode and constitutes address discharge by the potential difference between the  $V_a$  pulse and the pulse applied to the Y electrode. The TCP comprise four data driver ICs (STV7610A: 96 pins output pins). Seven TCPs are required for signal scan.

### 9.2 Abbreviation List

AC	Alternating Current
COF	Circuit On Foil
DC	Direct Current
ERC	Energy Recovery Circuit
ESD	Electro Static Discharge
FET	Field Effect Transistor
FFC	Flat Foil Cable
FPC	Flexible Printed Circuit
FTV	Flat TeleVision
HD	High Definition
I/O	Input/Output
IC	Integrated Circuit
LB	Logic Buffer
LED	Light Emitting Diode
LVDS	Low Voltage Differential Signalling
PCB	Printed Circuit Board (same as PWB)
PDP	Plasma Display Panel
PSU	Power Supply Unit
PWB	Printed Wiring Board (same as PCB)
RGB	Red, Green, Blue colour space
SD	Standard Definition
SDI	Samsung Display Industry (supplier)
SMPS	Switched Mode Power Supply
SSB	Small Signal Board
SF	Sub Field
TCP	Tape Carrier Package
VR	Variable Resistor
Vsc	Scan Voltage
YBL	Y Buffer Lower board
YBU	Y Buffer Upper board
YM	Y Main board

### 9.3 IC Data Sheets

Not applicable.

## 10. Spare Parts List

### Notes;

- Determine the SDI part / model number of the PDP
- Find the SDI part number on the actual board to be replaced.  
SDI part number begin with "LJ92" and for the SMPS and sub SMPS the part number will begin with "LJ44".
- Find the SDI board part number in the spare parts overview.
- Find the SDI part number in this overview that matches the part number that is actually on the original board.
- Cross the SDI board part number to the philips part number.
- Order the philips part number.

- **Note:** The appearance of a leaded and lead-free board can be different; the colour of the PWB and also the layout of the components are sometimes different.

### Note:

**Kit 1:** 37" FCR kit consists of 4 boards ( Logic + Y-main + Y and E buffer)

reference Symptom Cure information TV-05/0006

CORRECTION XI: PDP with "Lead" boards and use of Logic board (LJ92-01056A):

Replace the Logic board, the Y-Main board, the Y-buffer board, and the Logic buffer E board together.

These four boards are available in Service Kit number 1 (with order code 9965 000 33796 (LJ93-00205A)).

The content of Service Kit number 1 is:

- \* Logic main board 9965 000 29322 (LJ92-01257A).
- \* Y-Main board 9965 000 32621 (LJ92-01149B).
- \* Y-Buffer board 9965 000 32619 (LJ92-01147A).
- \* Logic-Buffer E 9965 000 32616 (LJ92-01138B).

### Note:

**FCR Kit:** = False contouring reduction kit

### Note:

**Kit 2:** 37" FCR kit consists of 2 boards (logic + Y-main)

reference Symptom Cure information TV-05/0006

CORRECTION XI

PDP with "Lead-free" boards and use of Logic board (LJ92-01145A):

Replace the Logic board and the Y-Main board together. These two boards are available in Service Kit number 2 (with order code 9965 000 33797 (LJ93-00204A)).

The content of Service Kit number 2 is:

- \* Logic main board 9965 000 29322 (LJ92-01257A).
- \* Y-Main board 9965 000 32621 (LJ92-01149B).

3) PDP with "Lead-free" boards and use of Logic board (LJ92-01257A):

In case this PDP has a defective board, replace this defective board only

# 11. Revision List

## Manual xxxx xxx xxxx.0

- First release.

## Manual xxxx xxx xxxx.1

- **General:** Update of whole manual to the latest publication standards and information.
- **37" SD v4:** Errors corrected, and info updated.
- **42" SD v2:** Errors corrected, and info updated.
- **42" SD v3:** Errors corrected, and info updated.
- **42" SD v4:** New.
- **42" HD v3:** Errors corrected, and info updated.
- **42" HD v4:** New.
- **50" HD v3:** Errors corrected, and info updated.
- **50" HD v4:** New.

## Manual xxxx xxx xxxx.2

- SMPS layouts and voltages updated
- Alignments updated
- Parts list updated

## Manual xxxx xxx xxxx.3

- **General:** Correction of some minor errors.
- **Chapter 8, Alignments:** Errors corrected, and info updated.
