

Power Management IC for Automotive ADAS Platform

Quad Buck 2.1 MHz DC/DC Converter and Dual LDO with Watchdog Timer

S6BP401A is a power management IC, consists of quad buck 2.1 MHz DC/DC converter with built-in switching FETs, dual Low Drop-out regulator (LDOs) and a digital windowed watchdog timer. Having the switching FETs built-in, S6BP401A realizes high power conversion efficiency and high switching frequency up to 2.4 MHz. The internal FETs are capable to handle up to 3 A load. As S6BP401A employs the current mode architecture, it has fast load transient response. Built-in output voltage setting resistors and compensation circuits reduce BOM cost and component area.

Features

- Quad Buck DC/DC Converter (DD1 to DD4)
 - VIN Input Range: 4.5 V to 5.5 V
 - Switching Frequency
 - External clock mode: 1.8 MHz to 2.4 MHz
 - Internal clock mode: 2.0 MHz to 2.2 MHz
 - Built-in Switching FETs up to 3 A
 - Built-in Output Voltage Setting Resistors
 - Built-in Compensation Circuits
- Dual LDO (LD1, LD2)
 - VIN Input Voltage Range: 2.97 V to 5.5 V
 - Built-in Output Voltage Setting resistors
- Power Good Monitor Output for each DC/DC Converters, LDOs
- Built-in Windowed Watchdog Timer (WDT)
- Under Voltage Lockout (UVLO)
- Thermal Shutdown (TSD)
- Over Current Protection (OCP)
- Over Voltage Protection (OVP)
- Independent Enabling for each DC/DC Converters and LDOs
- Load-independent Soft-Start
- Built-in Discharge Resistors
- Small 6 mm × 6 mm QFN-40 Package
- AEC-Q100 compliant (Grade-1)

Block Diagram

Applications

- Automotive Applications
- Advanced Driver Assistance Systems (ADAS)
- Camera Systems such as Security Camera
- Industrial Applications

More Information

Cypress provides a wealth of data at www.cypress.com/pmic to help you to select the right PMIC device for your design, and to help you to quickly and effectively integrate the device into your design. Following is an abbreviated list for S6BP401A:

- Overview: [Automotive PMIC Portfolio](#), [Automotive PMIC Roadmap](#)
- Product Selector:
 - [S6BP401A](#): 6 ch Automotive PMIC for ADAS
- Application Notes: Cypress offers S6BP401A application notes. Recommended application notes for getting started with S6BP401A are:
 - [AN98649](#): How to Design a Power Management System
 - [AN201006](#): Thermal Considerations and Parameters
- Evaluation Kit Operation Manual:
 - [S6SBP401AM2SA1001](#): Power block for automotive ADAS platform
- Related Products:

3. Pin Functions

Table 3-1 Pin Functions

Functional Block	Pin Number	Pin Name	I/O	Description	Pin Setting When Not Being Used
DD1	19	EN1	I	Enable input terminal of DD1.	Ground
	30	FB1	I	Output voltage feedback terminal of DD1.	Ground
	33	PG1	O	Power good output terminal of DD1.	Ground
	29	PVCC1	-	Power supply terminal of DD1.	VCC
	28	LX1	O	Inductor connect terminal of DD1.	Leave pin open
	27	PGND1	-	Power ground terminal of DD1.	Ground
DD2	18	EN2	I	Enable input terminal of DD2.	Ground
	20	FB2	I	Output voltage feedback terminal of DD2.	Ground
	31	PG2	O	Power good output terminal of DD2.	Ground
	21, 22	PVCC2	-	Power supply terminal of DD2.	VCC
	23, 24	LX2	O	Inductor connect terminal of DD2.	Leave pin open
	25, 26	PGND2	-	Power ground terminal of DD2.	Ground
DD3	17	EN3	I	Enable input terminal of DD3.	Ground
	9	FB3	I	Output voltage feedback terminal of DD3.	Ground
	10	PG3	O	Power good output terminal of DD3.	Ground
	8	PVCC3	-	Power supply terminal of DD3.	VCC
	7	LX3	O	Inductor connect terminal of DD3.	Leave pin open
	6	PGND3	-	Power ground terminal of DD3.	Ground
DD4	16	EN4	I	Enable input terminal of DD4.	Ground
	2	FB4	I	Output voltage feedback terminal of DD4.	Ground
	1	PG4	O	Power good output terminal of DD4.	Ground
	3	PVCC4	-	Power supply terminal of DD4.	VCC
	4	LX4	O	Inductor connect terminal of DD4.	Leave pin open
	5	PGND4	-	Power ground terminal of DD4.	Ground
LD1	15	ENL1	I	Enable input terminal of LD1.	Ground
	36	PVCC1	-	Power supply terminal of LD1.	VCC
	35	LDO1	O	Output terminal of LD1.	Leave pin open
LD2	14	ENL2	I	Enable input of LD2.	Ground
	40	PGL2	O	Power good output terminal of LD2.	Ground
	37	PVCC2	-	Power supply terminal of LD2.	VCC
	38	LDO2	O	Output terminal of LD2.	Leave pin open
WDT	12	WDI	I	Trigger input terminal of WDT.	Ground
	13	RST	O	Reset input terminal of WDT.	Ground
SYNC	11	SYNC	I	External clock input terminal.	Ground
-	34	VCC	-	Power supply terminal for analog controller.	-
-	32	VREG	O	Internal 1.8 V supply voltage capacitor terminal. Do NOT supply or load this terminal externally.	-
-	39	GND	-	Ground terminal for analog controller.	-
-	EP	EP	-	Exposed pad. Connect to ground plane.	-
-	CP1, CP2, CP3, CP4	CP	-	Corner pad for reinforcing attachment to a board. Connect to ground plane.	-

4. Preset Output Voltage

6. Absolute Maximum Ratings

Table 6-1 Absolute Maximum Ratings

Parameter	Symbol	Condition	Rating		Unit
			Min	Max	
Power supply voltage	V _{VCC}	VCC	-0.3	+6.9	V
	V _{PVCC}	PVCC1, PVCC2, PVCC3, PVCC4	-0.3	+6.9	V
	V _{PVCCCL}	PVCCCL1, PVCCCL2	-0.3	+6.9	V
Input voltage	V _{EN}	EN1, EN2, EN3, EN4, ENL1, ENL2	-0.3	+6.9	V
	V _{WDI}	WDI	-0.3	+6.9	V
	V _{SYNC}	SYNC	-0.3	+6.9	V
	V _{FB}	FB1, FB2, FB3, FB4	-0.3	+6.9	V
	V _{PG}	PG1, PG2, PG3, PG4, PGL2	-0.3	+6.9	V
	V _{RST}	RST	-0.3	+6.9	V
LX voltage	V _{LX}	LX1, LX2, LX3, LX4	-0.3	+6.9	V
Voltage difference	V _{PVCC-VCC}	PVCC1 -VCC, PVCC2-VCC, PVCC3-VCC, PVCC4-VCC	-0.3	+0.3	V
	V _{PGND-GND}	PGND1-GND, PGND2-GND, PGND3-GND, PGND4-GND	-0.3	+0.3	V
	V _{PVCC-LX}	PVCC1-LX1, PVCC2-LX2, PVCC3-LX3, PVCC4-LX4	-0.3	+6.9	V
	V _{VCC-INPUT}	VCC-EN1, VCC-EN2, VCC-EN3, VCC-EN4, VCC-EN1L, VCC-EN2L, VCC-WDI, VCC-SYNC, VCC-FB1, VCC-FB2, VCC-FB3, VCC-FB4	-0.3	+6.9	V
Power dissipation	P _D	T _A ≤ + 25 °C, Thermal resistance (θ _{JA}): 18 °C /W (*1)	-	6940	mW
Junction temperature	T _J	-	-40	+150	°C
Storage temperature	T _{STG}	-	-55	+150	°C

*1: When the IC is mounted on 76.2 mm × 114.3 mm four-layer epoxy board. IC is mounted on a four-layer epoxy board, which terminal bias, and the IC's thermal pad is connected to the epoxy board.

WARNING

- Semiconductor devices may be permanently damaged by application of stress (including, without limitation, voltage, current or temperature) in excess of absolute maximum ratings. Do not exceed any of these ratings.

Figure 6-1 Maximum Power Dissipation - Operating Ambient Temperature Characteristics

7. Recommended Operating Conditions

Table 7-1 Recommended Operating Conditions

Parameter	Symbol	Condition	Value			Unit
			Min	Typ	Max	
Power supply voltage	V _{VCC}	VCC	+4.5	+5.0	+5.5	V
	V _{PVCC}	PVCC1, PVCC2, PVCC3, PVCC4	-	V _{VCC}	-	V
	V _{PVCCCL}	PVCCCL1, PVCCCL2	+2.97	+5.0	V _{VCC}	V
Input voltage	V _{EN}	EN1, EN2, EN3, EN4, ENL1, ENL2	0	-	V _{VCC}	V
	V _{WDI}	WDI	0	-	V _{VCC}	V
	V _{SYNC}	SYNC	0	-	V _{VCC}	V
	V _{FB}	FB1, FB2, FB3, FB4	0	-	V _{VCC}	V
	V _{PG}	PG1, PG2, PG3, PG4, PGL2	0	-	+5.5	V
	V _{RST}	RST	0	-	+5.5	V
Operating ambient temperature	T _A	-	-40	+25	+125	°C

WARNING:

1. The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated under these conditions.
2. Any use of semiconductor devices will be under their recommended operating condition.
3. Operation under any conditions other than these conditions may adversely affect reliability of device and could result in device failure.
4. No warranty is made with respect to any use, operating conditions or combinations not represented on this data sheet. If you are considering application under any conditions other than listed herein, please contact sales representatives beforehand.

8. Electrical Characteristics

$V_{VCC} = V_{PVCC} = 5.0\text{ V}$, $V_{PVCCL} = 5.0\text{ V}$, $T_A = T_J = -40\text{ to }+125\text{ }^\circ\text{C}$, unless otherwise noted. Typical values are at $T_A = +25\text{ }^\circ\text{C}$.

Table 8-1 Electrical Characteristics

Parameter	Symbol	Condition	Value			Unit
			Min	Typ	Max	
Supply Current						
Shutdown current	I_{VCCS}	VCC pin, $V_{EN1} = V_{EN2} = V_{EN3} = V_{EN4} = V_{ENL1} = V_{ENL2} = 0\text{ V}$	-	1	10	μA
UVLO: Under Voltage Lockout (VCC)						
Threshold voltage	V_{UVLOF}	V_{VCC} falling, UVLO stop voltage	3.80	3.95	4.10	V
Hysteresis	V_{UVHYS}	-	0.27	0.30	0.33	V
TSD: Thermal Shutdown						
Shutdown temperature	T_{TSD}	Temperature rising	-	165 (*1)	-	$^\circ\text{C}$
Hysteresis	T_{TSDHYS}	-	-	10 (*1)	-	$^\circ\text{C}$
Enable Inputs (EN1, EN2, EN3, EN4, ENL1, ENL2)						
Input high voltage	V_{IHEN}	-	2.0	-	V_{VCC}	V
Input low voltage	V_{ILEN}	-	0	-	0.4	V
Input current	I_{IHEN}	$V_{EN} = 5.0\text{ V}$	33	50	100	μA
Pull down resistance	R_{PDEN}	-	50	100	150	$\text{k}\Omega$
Internal Linear Regulator Output (VREG)						
Output voltage	V_{VREG}	$V_{VCC} = 5.0\text{ V}$	1.74	1.80	1.86	V
Maximum output current	I_{VREG}	$V_{VCC} = 5.0\text{ V}$	5	-	-	mA
Over voltage lockout threshold	$V_{VREGOVR}$	V_{VREG} rising, Power fail	1.86	1.92	1.98	V
	$V_{VREGOVF}$	V_{VREG} falling, Power good	1.81	1.87	1.93	V
Under voltage lockout threshold	$V_{VREGUVR}$	V_{VREG} rising, Power good	1.67	1.73	1.79	V
	$V_{VREGUVF}$	V_{VREG} falling, Power fail	1.62	1.68	1.74	V
Oscillator						
Switching frequency	f_{OSC}	-	2.0	2.1	2.2	MHz
Synchronization Input (SYNC)						
Input high voltage	V_{IHsync}	-	2.0	-	V_{VCC}	V
Input Low voltage	V_{ILsync}	-	0	-	0.4	V
Input current	I_{IHsync}	$V_{EN} = 5.0\text{ V}$	33	50	100	μA
Pull down resistance	R_{PDSync}	-	50	100	150	$\text{k}\Omega$
Input frequency	f_{sync}	-	1.8	2.1	2.4	MHz
Switching frequency	f_{osc}	-	-	f_{sync}	-	MHz

Parameter	Symbol	Condition	Value			Unit

10. Function

10.1 Turning ON and OFF Sequence

When all of the enable input terminals (EN1, EN2, EN3, EN4, ENL1 and ENL2) are “Low”, the device is in shutdown state. When any one or more than one of them go “High,” the device is initialized, then the internal linear regulator (VREG) starts generating 1.8 V internal supply voltage. After that, each DC/DC converters and LDOs state is transitioned to the state which can be started.

In order for the device to start, the VCC terminal voltage must be higher than the under-voltage lockout threshold ($V_{UVLOF} + V_{UVHYS}$).

Figure 10-1 depicts the turning-on and off sequence where the enable signals are connected to VCC. Figure 10-2 depicts that where the enable signals are respectively controlled after the IC is powered.

Figure 10-1 Turning ON and OFF Sequence (where EN1 and ENL1 are Connected to VCC)

*1: Given that the system employs the same external parts with those specified in “11. Application Circuit Example”.

Figure 10-2 Turning ON and OFF Sequence (where EN1 and ENL1 are Respectively Controlled)

*1: Given that the system employs the same external parts with those specified in "11. Application Circuit Example".

10.2 Over Current Protection

The over current protection of the DC/DC converters detects the inductor peak current with on-resistance of Internal high side switching FET. If the DC/DC converter is over current state, the corresponding output voltage is decreased. If the device returns from over current state, the output voltage is target voltage.

Each LDOs equips foldback current limiter in order to prevent the IC itself from being damaged or destroyed. The curve of output current and output voltage in over current state is shown in the [Figure 10-3](#).

Figure 10-3 LDO Foldback Over Current Protection Characteristic

10.3 Over Voltage Protection

The over voltage protection of the DC/DC converters detects the output voltage. If the DC/DC converter is over voltage state, the corresponding channel stops switching and inductor connecting terminal (LX1, LX2, LX3, LX4) is held at high impedance. If the device returns from over voltage state, the channel returns switching automatically.

Figure 10-4 Over Voltage Protection Timing Chart

10.4 Thermal Shutdown (TSD)

If the junction temperature reaches +165 °C, all DC/DC converters and LDOs stop outputting voltage. Then the discharge operation is carried out to discharge the output capacitor (The discharge operation continues until the state of the thermal shutdown released.) When the junction temperature drops below +155 °C, the soft-starters activate regulators and start generating voltage gradually if the enable is "High."

Figure 10-5 Thermal Shutdown Timing Chart

10.5 Under Voltage Lockout (UVLO)

If the VCC terminal voltage (V_{VCC}) drops below the lower UVLO threshold (V_{UVLOF}), all DC/DC converters (DD1, DD2, DD3, DD4), LDOs (LD1, LD2), windowed watchdog timer (WDT) and the internal linear regulator (VREG) stop working. When the VCC terminal voltage (V_{VCC}) is raised higher than the higher UVLO threshold ($V_{UVLOF} + V_{UVHYS}$), the device returns automatically.

10.6 Soft-Start Operation

S6BP401A equips load-independent soft-start function in order to prevent the DC/DC converters and LDOs from having rush current at the start-up. The soft-start timing is shown in the [Figure 10-6](#), and is given by the following equation;

$$T_{SS} = V_{OUT} \times T_{COESS}, \text{ where}$$

- T_{SS} [ms] : Soft-start time
- V_{OUT} [V] : Output voltage (V_{OUT1} , V_{OUT2} , V_{OUT3} , V_{OUT4} , V_{OUTL1} , V_{OUTL2})
- T_{COESS} [ms/V] : Soft-start time coefficient (T_{COESS1} , T_{COESS2} , T_{COESS3} , T_{COESS4} , $T_{COESSL1}$, $T_{COESSL2}$)

Figure 10-6 Soft-Start Operation Timing Chart

10.7 Discharge Operation

When an enable signal goes “Low”, the corresponding output capacitor is discharged by the internal discharge resistor and the output voltage is decreased gradually. Note that the discharge time is not consistent: it depends on the output load current.

As for a DC/DC converter, the output capacitor is discharged from FB1, FB2, FB3 and FB4 terminal to PGND1, PGND2, PGND3 and PGND4 terminal respectively. As for a LDO, the output capacitor is dis-charged from LDO1, LDO2 terminal to GND terminal.

The discharge time required to decrease the output voltage by 90 % without any explicit load given by the following equation;

$$T_{DIS} = 2.3 \times R_{DIS} \times C_{OUT}, \text{ where}$$

T_{DIS} [ms] : Discharge time

R_{DIS} [k Ω] : Discharge resistance (R_{DIS1} , R_{DIS2} , R_{DIS3} , R_{DIS4} , R_{DISL1} , R_{DISL2})

C_{OUT} [μ F] : Output capacitor

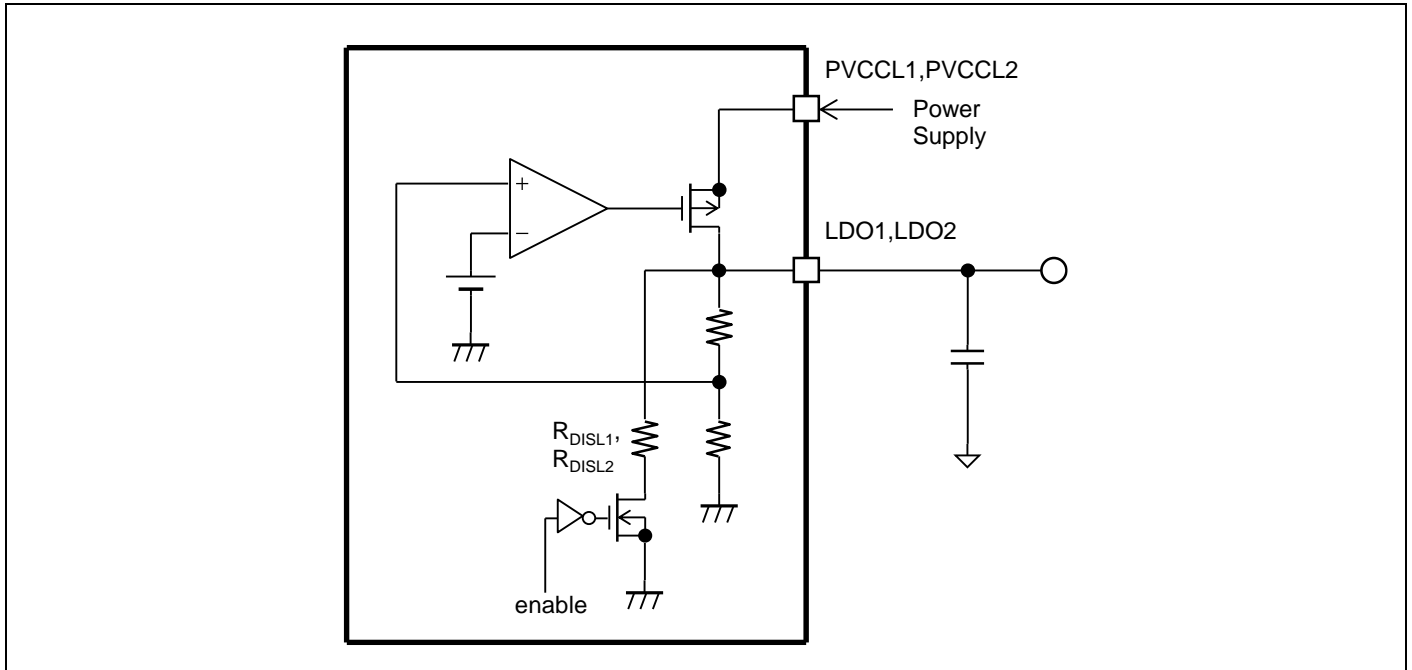

Figure 10-7 Discharge Diagram (DC/DC Converter)

Figure 10-8 Discharge Diagram (LDO)

10.8 Power Good Monitor and Reset Function

Each DC/DC converters and LDOs has power good function to indicate whether the output voltage is in the expected range. The [Table 10-1](#) describes the power good pin names and their functions of each DC/DC converters and LDOs. The [Figure 10-9](#) and [Figure 10-10](#) depict power-good timing chart.

Table 10-1 Power Good Monitor and Reset Function Pin List

Channel	Pin Name	Description
DD1	PG1	Enabling DD1 is followed by rising of the DD1 output voltage (V_{OUT1}). Once V_{OUT1} reaches within the power good range ($V_{PGUV} + V_{PGUVHYS} < V_{OUT1} < V_{PGOV} - V_{PGOVHYS}$), the power good monitor output (PG1 terminal) changes its state from “Low” to “Open” after a power-on-reset time (T_{RPG}). When V_{OUT1} is out of the power good range ($V_{OUT1} \leq V_{PGUV}$ or $V_{OUT1} \geq V_{PGOV}$), PG1 terminal changes its state from “Open” to “Low” after the propagation delay (T_{PPG}). The glitch within T_{PPG} does not affect the power good monitor output.
DD2	PG2	Enabling DD2 is followed by rising of the DD2 output voltage (V_{OUT2}). Once V_{OUT2} reaches within the power good range ($V_{PGUV} + V_{PGUVHYS} < V_{OUT2} < V_{PGOV} - V_{PGOVHYS}$), the power good monitor output (PG2 terminal) changes its state from “Low” to “Open” after a power-on-reset time (T_{RPG}). When V_{OUT2} is out of the power good range ($V_{OUT2} \leq V_{PGUV}$ or $V_{OUT2} \geq V_{PGOV}$), PG2 terminal changes its state from “Open” to “Low” after the propagation delay (T_{PPG}). The glitch within T_{PPG} does not affect the power good monitor output.
DD3	PG3	Enabling DD3 is followed by rising of the DD3 output voltage (V_{OUT3}). Once V_{OUT3} reaches within the power good range ($V_{PGUV} + V_{PGUVHYS} < V_{OUT3} < V_{PGOV} - V_{PGOVHYS}$), the power good monitor output (PG3 terminal) changes its state from “Low” to “Open” after a power-on-reset time (T_{RPG}). When V_{OUT3} is out of the power good range ($V_{OUT3} \leq V_{PGUV}$ or $V_{OUT3} \geq V_{PGOV}$), PG3 terminal changes its state from “Open” to “Low” after the propagation delay (T_{PPG}). The glitch within T_{PPG} does not affect the power good monitor output.
DD4	PG4	Enabling DD4 is followed by rising of the DD4 output voltage (V_{OUT4}). Once V_{OUT4} reaches within the power good range ($V_{PGUV} + V_{PGUVHYS} < V_{OUT4} < V_{PGOV} - V_{PGOVHYS}$), the power good monitor output (PG4 terminal) changes its state from “Low” to “Open” after a power-on-reset time (T_{RPG}). When V_{OUT4} is out of the power good range ($V_{OUT4} \leq V_{PGUV}$ or $V_{OUT4} \geq V_{PGOV}$), PG4 terminal changes its state from “Open” to “Low” after the propagation delay (T_{PPG}). The glitch within T_{PPG} does not affect the power good monitor output.

Channel	Pin Name	Description
LD1	RST	Enabling LD1 is followed by rising of the LD1 output voltage (V_{OUTL1}). Once V_{OUTL1} reaches within the power good range ($V_{RSUV} + V_{RSUVHYS} < V_{OUTL1} < V_{RSOV} - V_{RSOVHYS}$), the RST terminal changes its state from “Low” to “Open” after a power-on-reset time (T_{RD}). When V_{OUTL1} is out of the power good range ($V_{OUTL1} \leq V_{RSUV}$ or $V_{OUTL1} \geq V_{RSOV}$), RST terminal changes “Open” to “Low” after the propagation delay (T_{PRST}). The glitch within T_{PRST} does not affect the power good monitor output.
LD2	PGL2	Enabling LD2 is followed by rising of the LD2 output voltage (V_{OUTL2}). Once V_{OUTL2} reaches within the power good range ($V_{PGUV} + V_{PGUVHYS} < V_{OUTL2} < V_{PGOV} - V_{PGOVHYS}$), the power good monitor output (PGL2 terminal) changes its state from “Low” to “Open” through the power-on-reset time (T_{RPG}). When V_{OUTL2} is out of the power good range ($V_{OUTL2} \leq V_{PGUV}$ or $V_{OUTL2} \geq V_{PGOV}$), PGL2 terminal changes “Open” to “Low” after the propagation delay (T_{PPG}). The glitch within T_{PPG} does not affect the power good monitor output.

Figure 10-9 Power-Good Monitor Output Timing Chart (PG1, PG2, PG3, PG4, PGL2)

Figure 10-10 Power-Good Monitor Output Timing Chart (RST)

10.9 Watchdog Timer

S6BP401A employs a digital windowed watchdog timer. The digital windowed watchdog timer starts monitoring trigger signal, when the LD1 output voltage (V_{OUTL1}) reaches the power good level after enabling LD1.

Figure 10-11 shows the state diagram of the digital watchdog timer. There are six states in the diagram. In the normal operation, the state is expected to move back and forth between “CW” and “OW”,

At first, as described in the section 10.8, enabling LD1 brings “RESET” state, and the “RESET” state is kept for the “Reset Time (T_{RD})” outputting “Low” from RST terminal.

In the second, after T_{RD} in the “RESET” state, the state will transition to “Ignore Window (IW)”, and let RST terminal be “Open”. The “IW” state will be elapsed in the “Ignore Window Time (T_{IW})”

In the third, after elapsing, the state will transition to “Long Open Window (LOW)” state, and let RST terminal be “Open.” In this state, a trigger signal is expected to be input: if an input trigger arrives, the state will immediately transition to the “Closed Window (CW)” state. Without an input trigger in the “Long Open Window Time (T_{LOW})” the state will be elapsed and will transition to “RESET” state.

In the “CW” state, a trigger signal is expected NOT to be input: if an input trigger arrives, the state will immediately transition to the “RESET” state. Without an input trigger in the “Closed Window Time (T_{CW})” the state will be elapsed and will transition to “Open Window (OW)” state.

In the “OW” state, a trigger signal is expected to be input: if an input trigger arrives, the state will immediately transition to the “Closed Window (CW)” state. Without an input trigger in the “Open Window Time (T_{OW})” the state will be elapsed and will transition to “RESET” state.

Figure 10-14 shows that to avoid wrong triggering due to glitch noise two “High” samples followed by two “Low” samples to input WDI pin are decoded as a trigger.

In any states above, a power failure of LD1 will cause a transition to “OFF” state, and output “Low” from RST terminal until LD1 goes well.

Figure 10-11 Watchdog Timer State Diagram

Figure 10-12 Window Watchdog Timing Chart (WDI)

Figure 10-13 Window Watchdog Timing Chart (LD1)

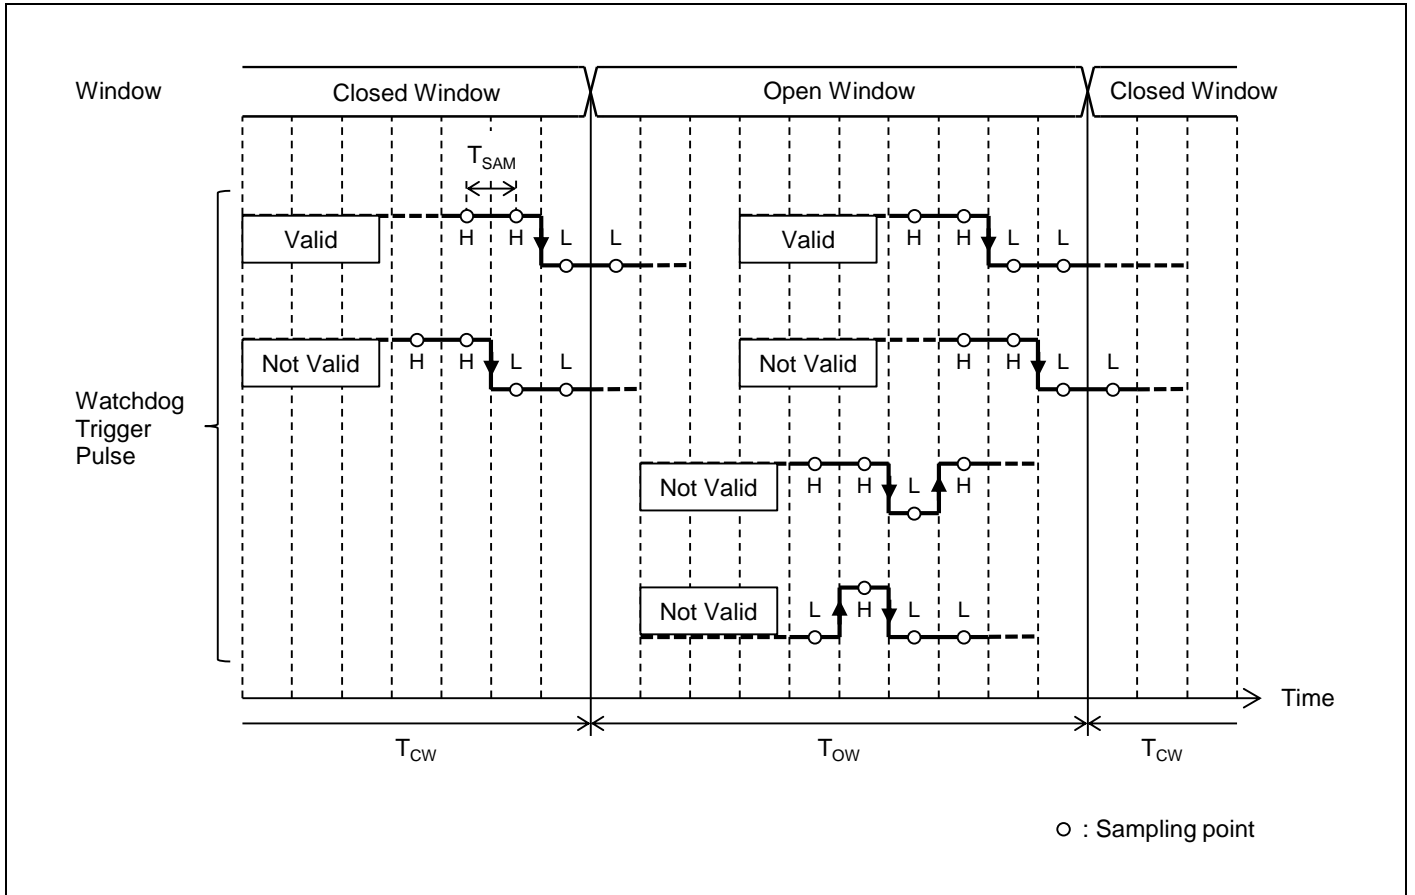

Figure 10-14 De-glint of Window Watchdog Trigger Pulse

10.10 Internal Linear Regulator Output (VREG)

S6BP401A equips a 1.8 V linear regulator as the power source for its internal circuit. A low ESR 1.0 μF ceramic capacitor should be connected from VREG pin to GND. VREG is not designed to supply to external load.

Unless the VREG terminal voltage is in the range between the over voltage lockout level $V_{VREGOVR}$ and the under voltage lockout level $V_{VREGUVF}$, S6BP401A considers it abnormal and halts all DC/DC converters, LDOs and windowed watchdog timer. When the VREG terminal voltage returns to the power good voltage range ($V_{VREGOVR} \leq V_{VREG} \leq V_{VREGUVF}$), S6BP401A returns the DC/DC converters, LDOs and window watchdog timer to the normal mode. Soft-start circuits of each regulator gradually generates supply voltage as described in the section 10.6.

Figure 10-15 VREG OVLO/UVLO Timing Chart

N	40		
ND	10		
NE	10		

NOTES

- ALL DIMENSIONS ARE IN MILLIMETERS.
- DIMENSIONING AND TOLERANCING CONFORMS TO ASME Y14.5-1994.
- N IS THE TOTAL NUMBER OF TERMINALS.
- DIMENSION "b" APPLIES TO METALLIZED TERMINAL AND IS MEASURED BETWEEN 0.15 AND 0.30mm FROM TERMINAL TIP. IF THE TERMINAL HAS THE OPTIONAL RADIUS ON THE OTHER END OF THE TERMINAL, THE DIMENSION "b" SHOULD NOT BE MEASURED IN THAT RADIUS AREA.
- ND AND NE REFER TO THE NUMBER OF TERMINALS ON EACH D AND E RESPECTIVELY.
- PIN #1 ID ON TOP WILL BE LOCATED WITHIN INDICATED ZONE.
- BILATERAL COPLANARITY ZONE APPLIES TO THE EXPOSED HEAT SINK SLUG AS WELL AS THE TERMINALS.
- REINFORCEMENT LAND SIZE 0.35mm SQ.
- JEDEC SPECIFICATION NO. REF.: N/A.

-	-	Initial release

NOTE: Please see "Document History" about later revised information.

Document History

Document Title: S6BP401A Power Management IC for Automotive ADAS Platform
 Document Number: 002-03341

Revision	ECN	Submission Date	Description of Change
**	4922113	09/16/2015	New Spec. Updated Ordering Information
*A	5085035	01/14/2016	Updated "3. Pin Functions" Updated "6. Absolute Maximum Ratings" Updated "7. Recommended Operating Conditions" Added "Development Support" Added "12. Reference Data" Updated "13. Ordering Information"
*B	5160391	03/04/2016	Added "AEC-Q100 compliant (Grade-1)" in "Features" Added the following values in "8. Electrical Characteristics" Supply Current I _{VCCS} : Max value UVLO: Under Voltage Lockout (VCC) V _{UVHYS} : Min and Max values Enable Inputs (EN1, EN2, EN3, EN4, ENL1, ENL2) I _{IHEN} : Min and Max values Synchronization Input (SYNC) I _{IHSYNC} : Min and Max values Power Good Monitor (PG1, PG2, PG3, PG4, PGL2, RST) V _{PGOVHYS} : Min and Max values V _{PGUVHYS} : Min and Max values Watchdog Timer (WDI) T _{WD} : Min and Max values I _{IHWDI} : Min and Max values DD1: Buck DC/DC Converter R _{FB1} : Min and Max values R _{ONHS1} : Max values R _{ONLS1} : Max values I _{LEAK1} : Max value V _{OVPHYS1} : Min and Max values R _{DIS1} : Min and Max values T _{COESS1} : Min and Max values DD2: Buck DC/DC Converter R _{FB2} : Min and Max values R _{ONHS2} : Max values R _{ONLS2} : Max values

Revision	ECN	Submission Date	Description of Change
*B	5160391	03/04/2016	<p> ILEAK2: Max value VOVPHYS2: Min and Max values RDIS2: Min and Max values TCOESS2: Min and Max values DD3: Buck DC/DC Converter RFB3: Min and Max values RONHS3: Max values RONLS3: Max values ILEAK3: Max value VOVPHYS3: Min and Max values RDIS3: Min and Max values TCOESS3: Min and Max values DD4: Buck DC/DC Converter RFB4: Min and Max values RONHS4: Max values RONLS4: Max values ILEAK4: Max value VOVPHYS4: Min and Max values RDIS4: Min and Max values TCOESS4: Min and Max values LD1: LDO Regulator ILEAKL1: Max value RDISL1: Min and Max values TCOESSL1: Min and Max values LD2: LDO Regulator ILEAKL2: Max value RDISL2: Min and Max values TCOESSL2: Min and Max values Updated the following values in "8. Electrical Characteristics" DD1: Buck DC/DC Converter RONHS1: Typ value RONLS1: Typ value DD2: Buck DC/DC Converter RONHS2: Typ value RONLS2: Typ value DD3: Buck DC/DC Converter RONHS3: Typ value RONLS3: Typ value DD4: Buck DC/DC Converter RONHS4: Typ value RONLS4: Typ value Delete the following values in "8. Electrical Characteristics" Updated "Figure 10-1" and "Figure 10-2" Updated "10.5 Under Voltage Lockout (UVLO)" Added a part number, S6BP401AL2SN1B000, in "Table 13-1". Corrected an error in "Table 13-1". from S6BP401AW1SN1B000 to S6BP401AW0SN1B000 </p>
*C	5396389	08/09/2016	<p> Deleted "Development Support" and added "More Information" Added "S6BP401AY2SN1B000" to "Table 13-1 Ordering information" </p>
*D	5824031	07/19/2017	Adapted Cypress new logo.

Revision	ECN	Submission Date	Description of Change
*E	5929778	11/22/2017	Updated 14. Package Dimensions to the Cypress format Changed the suffix of the Part Number from "000" to "00A" in Table 13-1 Ordering information and Figure 13-1 Part numbering conventions
*F	6007678	01/18/2018	Added "S6BP401AL3SN1B00A" to " Table 13-1 Ordering Information " Fixed VVREG waveform in figure 10-15. VREG is in shutdown state when all of the enable input terminals are "Low".
*G	6174086	05/14/2018	Added the description for Figure 10-14 in "10.9 Watchdog Timer".
*H	6283903	08/17/2018	No update due to sunset review
*I	6771563	01/16/2020	Updated MPN in Table 13-1 Ordering information and Figure 13-1 Part numbering conventions.

This document, including any software or firmware included or referenced in this document ("Software"), is owned by Cypress under the intellectual property laws and treaties of the United States and other countries worldwide. Cypress reserves all rights under such laws and treaties and does not, except as specifically stated in this paragraph, grant any license under its patents, copyrights, trademarks, or other intellectual property rights. If the Software is not accompanied by a license agreement and you do not otherwise have a written agreement with Cypress governing the use of the Software, then Cypress hereby grants you a personal, non-exclusive, nontransferable license (without the right to sublicense) (1) under its copyright rights in the Software (a) for Software provided in source code form, to modify and reproduce the Software solely for use with Cypress hardware products, only internally within your organization, and (b) to distribute the Software in binary code form externally to end users (either directly or indirectly through resellers and distributors), solely for use on Cypress hardware product units, and (2) under those claims of Cypress's patents that are infringed by the Software (as provided by Cypress, unmodified) to make, use, distribute, and import the Software solely for use with Cypress hardware products. Any other use, reproduction, modification, translation, or compilation of the Software is prohibited.

TO THE EXTENT PERMITTED BY APPLICABLE LAW, CYPRESS MAKES NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS DOCUMENT OR ANY SOFTWARE OR ACCOMPANYING HARDWARE, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. No computing device can be absolutely secure. Therefore, despite security measures implemented in Cypress hardware or software products, Cypress shall have no liability arising out of any security breach, such as unauthorized access to or use of a Cypress product. CYPRESS DOES NOT REPRESENT, WARRANT, OR GUARANTEE THAT CYPRESS PRODUCTS, OR SYSTEMS CREATED USING CYPRESS PRODUCTS, WILL BE FREE FROM CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, DATA LOSS OR THEFT, OR OTHER SECURITY INTRUSION (collectively, "Security Breach"). Cypress disclaims any liability relating to any Security Breach, and you shall and hereby do release Cypress from any claim, damage, or other liability arising from any Security Breach. In addition, the products described in these materials may contain design defects or errors known as errata which may cause the product to deviate from published specifications. To the extent permitted by applicable law, Cypress reserves the right to make changes to this document without further notice. Cypress does not assume any liability arising out of the application or use of any product or circuit described in this document. Any information provided in this document, including any sample design information or programming code, is provided only for reference purposes. It is the responsibility of the user of this document to properly design, program, and test the functionality and safety of any application made of this information and any resulting product. "High-Risk Device" means any device or system whose failure could cause personal injury, death, or property damage. Examples of High-Risk Devices are weapons, nuclear installations, surgical implants, and other medical devices. "Critical Component" means any component of a High-Risk Device whose failure to perform can be reasonably expected to cause, directly or indirectly, the failure of the High-Risk Device, or to affect its safety or effectiveness. Cypress is not liable, in whole or in part, and you shall and hereby do release Cypress from any claim, damage, or other liability arising from any use of a Cypress product as a Critical Component in a High-Risk Device. You shall indemnify and hold Cypress, its directors, officers, employees, agents, affiliates, distributors, and assigns harmless from and against all claims, costs, damages, and expenses, arising out of any claim, including claims for product liability, personal injury or death, or property damage arising from any use of a Cypress product as a Critical Component in a High-Risk Device. Cypress products are not intended or authorized for use as a Critical Component in any High-Risk Device except to the limited extent that (i) Cypress's published data sheet for the product explicitly states Cypress has qualified the product for use in a specific High-Risk Device, or (ii) Cypress has given you advance written authorization to use the product as a Critical Component in the specific High-Risk Device and you have signed a separate indemnification agreement.
