

◆ Description

The S8300 is an integrated adjustable constant-current source, driving loads up to 600mA. The output current level can be adjusted via an external resistor(R_{FB}). The integrated SHDN input of the S8300P permits LED brightness regulation by pulse width modulation (PWM), with the SHDN input, the LED brightness can be regulated via duty cycle. Also, SHDN low sets the S8300 in sleep mode, the SHDN pin also can be used as an enable input.

This discrete integration technology eliminates individual components by combining them into a single package, which results in a significant reduction of both system cost and board space.

◆ Features

- Supplies stable bias current for LEDs
- LED drive current adjustable via single external resistor (Max 600mA)
- Low Cost, Low External Parts Count
- Halogen-Free Package is Available

◆ Pin Assignment & Description

Package : SOP-8

Pin No	Symbol	Description
1	VCC	Power Supply
2	SHDN	Disable On/Off
3	GND	Ground
4	N.C	No connection
5	N.C	No connection
6	N.C	No connection
7	OUTPUT	Open Collector Output
8	FB	Feedback / 0.2V Reference

◆ Functional block diagram

◆ Design Consideration

1) Calculation for R_{FB}

$$- R_{FB} = 0.2V / I_{LED}$$

2) Calculation for V_{drop}

$$- V_{drop} = V_{CC} - V_{LED}$$

3) Calculation for Power Dissipation on the S8300P

$$- P_{D1} = (V_{drop} - V_{FB}) \times I_{LED}$$

$$- P_{D2} = V_{CC} \times I_Q$$

$$- P_{D(total)} = P_{D1} + P_{D2}$$

4) If does not use an Dimming function, connect SHDN Pin with the ground.

5) When V_{cc} uses to exceed 25V, Dimming functions the use is impossible.

◆ Typical Applications

<APP4. High Voltage Operation of S8300P (1) >

<APP5. High Voltage Operation of S8300P (2) >

For operation in excess of S8300 specified maximum voltage (V_{CC} & V_{OUT}) of 25V, one way is to connect a sufficient number of LEDs between the power supply voltage and the DC input of the V_{CC} & V_{OUT} such that the voltage seen at pin(V_{CC} & V_{OUT}) is less than 25V.

That is to say, use additional LEDs to drop the voltage fed to the S8300 below its maximum rating, in the usual way. Refer to **APP4,5** Note that the exact number of diodes required will depend on the supply voltage V_{CC} and output voltage V_{OUT} , the voltage drops across the particular LEDs being used. (Red, Blue and White LEDs have different forward voltage drop.) Use enough LEDs such that voltage at pin(V_{CC} & V_{OUT}) of S8300 is < 25V

※ Caution : When V_S uses to exceed 25V, Dimming functions the use is impossible.
