2.45 GHz low voltage RF transceiver

SA2421

DESCRIPTION

The SA2421 transceiver is a combined low-noise amplifier, receive mixer, transmit mixer and LO buffer IC designed using a 20 GHz f_T BiCMOS process, QUBiC2, for high-performance low-power communication systems for 2.4–2.5 GHz applications. The LNA has a 3.2 dB noise figure at 2.45 GHz with 14.3 dB gain and an IP3 intercept of -3 dBm at the input. The wide-dynamic-range receive mixer has a 11.2 dB noise figure and an input IP3 of +2.5 dBm at 2.45 GHz. The nominal current drawn from a single 3 V supply is 34 mA in transmit mode and 20 mA in receive mode. The SA2421 differs from the SA2420 by removal of the LO doubler and LO switch. The LNA reverse isolation is improved, and a separate pin is allocated for the transmit output.

FEATURES

- Low current consumption: 34 mA nominal transmit mode and 20 mA nominal receive mode
- High system power gain: 24 dB (LNA + Mixer) at 2.45 GHz
- Excellent gain stability versus temperature and supply voltage
- Separate Rx IN and Tx OUT pins
- Wide IF range: 50–500 MHz
- -10dBm typical LO input power
- Improved LNA reverse isolation S12
- TSSOP24 package

PIN CONFIGURATION

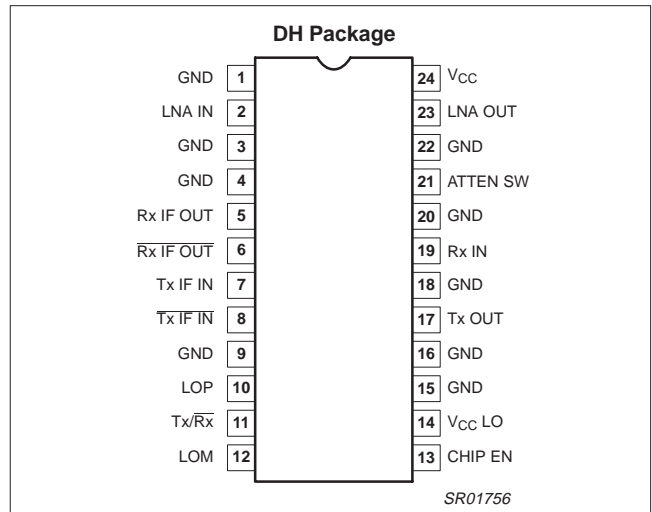

Figure 1. Pin configuration

APPLICATIONS

- IEEE 802.11 (WLAN)
- 2.45 GHz ISM band

ORDERING INFORMATION

DESCRIPTION	TEMPERATURE RANGE	ORDER CODE	DWG #
24-Pin Plastic Thin Shrink Small Outline Package (Surface-mount, TSSOP)	-40°C to +85°C	SA2421DH	SOT355-1

SA2421

ABSOLUTE MAXIMUM RATINGS

SYMBOL	PARAMETER	RATING	UNITS
V_{CC}	Supply voltage	-0.3 to +6	V
V_{IN}	Voltage applied to any pin	-0.3 to ($V_{CC} + 0.3$)	V
P_D	Power dissipation, $T_{amb} = 25^\circ\text{C}$ (still air) 24-Pin Plastic TSSOP	555	mW
T_{JMAX}	Maximum operating junction temperature	150	$^\circ\text{C}$
P_{MAX}	Maximum power (RF/IF/LO pins)	+20	dBm
T_{STG}	Storage temperature range	-65 to +150	$^\circ\text{C}$

NOTES:

- Transients exceeding these conditions may damage the product.
- Maximum dissipation is determined by the operating ambient temperature and the thermal resistance, and absolute maximum ratings may impact product reliability θ_{JA} : 24-Pin TSSOP = $117^\circ\text{C}/\text{W}$
- IC is protected for ESD voltages up to 2000 V, human body model.

RECOMMENDED OPERATING CONDITIONS

SYMBOL	PARAMETER	RATING	UNITS
V_{CC}	Supply voltage	2.7 to 5.5	V
T_{amb}	Operating ambient temperature range	-40 to +85	$^\circ\text{C}$

DC ELECTRICAL CHARACTERISTICS

$V_{CC} = +3\text{V}$, $T_{amb} = 25^\circ\text{C}$; unless otherwise stated.

t _{Tx-Rx}	Transmit-to-Receive switching time				1			μ s
t _{POWER UP}	Chip enable time				1			μ s
t _{PWR DWN}	Chip disable time				1			μ s

NOTES:

1. With simple external matching
2. With 50 pF coupling capacitors on all RF and IF parts
3. This part has been optimized for the stated frequency range. Operation outside this frequency range may yield performance other than specified in this datasheet.
4. Measured 5dB lower than 1dB compression point, with typical output matching network.
5. Measured at 1dB compression point.
6. With typical output matching network (no image reject mixer is used).

FUNCTIONAL DESCRIPTION

The SA2421 is a 2.45 GHz transceiver front-end available in the TSSOP-24 package. This integrated circuit (IC) consists of a low noise amplifier (LNA) and up- and down-converters. There is an enable/disable switch available to power up/down the entire chip in 1 μs, typically. This transceiver has several unique features.

The LNA has two operating modes: 1) high gain mode with a gain = +14.3 dB; and 2) low gain mode with a gain -19 dB. The switch for

this option is internal and is controlled externally by high and low logic to the pin. When the LNA is switched into the attenuation mode, active matching circuitry (on-chip) is switched in (reducing the number of off-chip components required). To reduce power consumption when the chip is transmitting, the LNA is automatically switched into a "sleep" mode (internally) without the use of external circuitry.

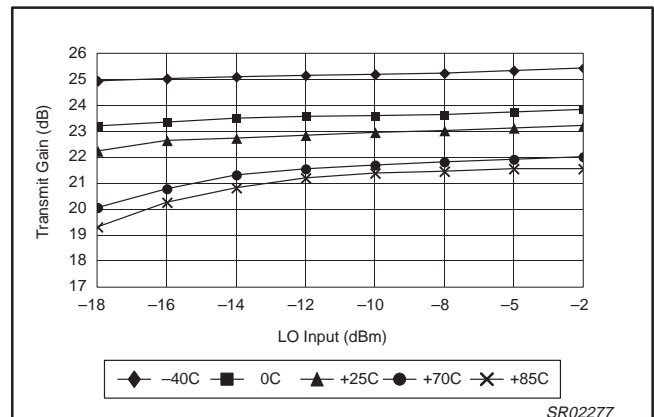

Figure 18. Transmit Gain vs LO Input over Temp Range

The Rx IN port is matched to 50 Ω and has an input IP3 of +2.2 dBm (mixer only). The down-convert mixer is buffered and has open collectors at the pins to allow for matching to common SAW filters. The up convert mixer has an input pin to output pin gain of 23 dB. The output of the up-converter is designed for a power level = +4.2 dBm (P_{-1dB}).

Data sheet status

Data sheet status	Product status	Definition [1]
Objective specification	Development	This data sheet contains the design target or goal specifications for product development. Specification may change in any manner without notice.
Preliminary specification	Qualification	This data sheet contains preliminary data, and supplementary data will be published at a later date. Philips Semiconductors reserves the right to make changes at any time without notice in order to improve design and supply the best possible product.
Product specification	Production	This data sheet contains final specifications. Philips Semiconductors reserves the right to make changes at any time without notice in order to improve design and supply the best possible product.

[1] Please consult the most recently issued datasheet before initiating or completing a design.

Definitions

Short-form specification — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

Limiting values definition — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

Application information — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Disclaimers

Life support — These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

Right to make changes — Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
