

## Linear Hall Effect Sensor ICs with Analog output

### FEATURES

- 3.5 to 10.5V wide supply voltage range
- 4.5mA power consumption for 5 VDC
- Output voltage proportional to magnetic flux density
- -40°C to 150°C wide ambient temperature range
- Fast power-on time
- Resistant to mechanical stress
- 3-pin SIP and SOT89-3 package are available

### DESCRIPTION

The SC400X are high performance small versatile linear Hall-Effect devices which are operated by the magnetic field from a permanent magnet or an electromagnet. The radiometric output voltage is set by the supply voltage and varies in proportion to the strength of the magnetic. The quiescent output voltage of the SC4002 and SC4003 is 50% of the supply voltage, and the sensitivity is 3.125mV/Gs and 5.0mV/Gs and 2.5mV/GS respectively.

The SC4002/SC4003/SC4005 provide low-noise output with temperature compensation. The linear position sensor ICs have an operating temperature range of -40°C to 150°C, appropriate for industrial environments. These devices are available in a 3-pin SIP and SOT89 packages. Both packages are lead(Pb) free, with 100% matte tin lead frame plating.

### APPLICATIONS

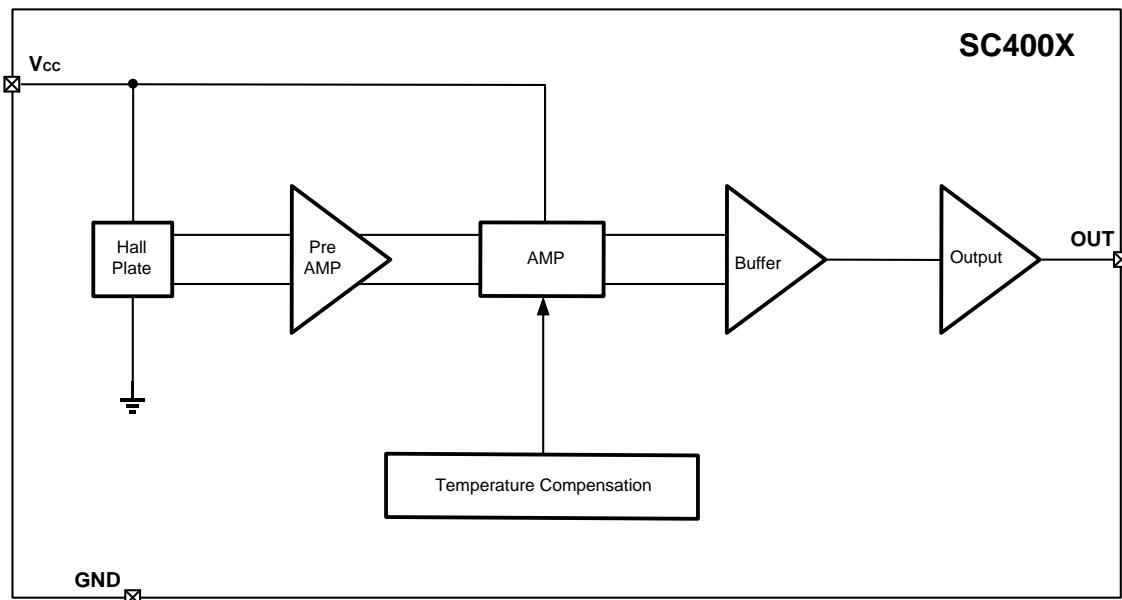

- Angular sensing
- Position sensing
- Over-current detection
- BLDC motor current monitoring
- Weigh and liquid level sensing

## TERMINAL CONFIGURATION

Terminal		Type	Description
Name	Number		
V <sub>cc</sub>	1	PWR	3.5V ~ 10.5 V power supply
GND	2	Ground	Ground terminal
OUT	3	Output	Output terminal

## ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range

Parameter	Symbol	Min.	Max.	Units
Power supply voltage	V <sub>CC</sub>	-0.5	30.0	V
Output terminal voltage	V <sub>OUT</sub>	-0.3	30.0	V
Supply current	I <sub>CC</sub>	--	20	mA
Output current	I <sub>OUT</sub>	--	2	mA

## TYPICAL APPLICATION

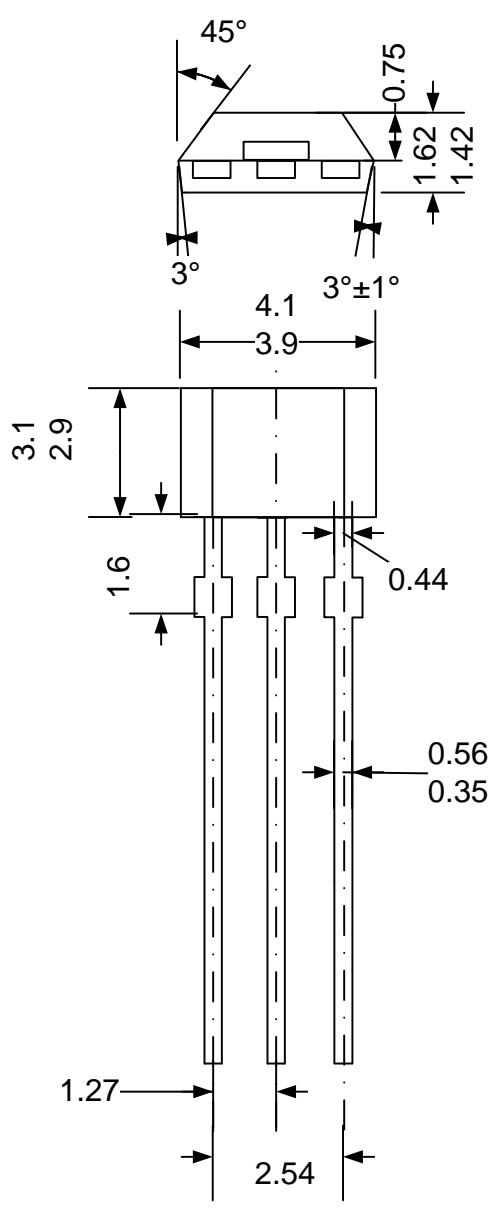

In the quiescent state (that is, with no significant magnetic field:  $B=0$ ), the output,  $V_{OUT(Q)}$ , equals to half of the supply voltage,  $V_{CC}$ , throughout the entire operating range of  $V_{CC}$ . The presence of a South-polarity magnetic field perpendicular to the branded surface of the package increases the output voltage from its quiescent value toward the supply voltage rail. The amount of the output voltage increase is proportional to the magnitude of the magnetic field applied. Conversely, the application of a North polarity field will decrease the output voltage from its quiescent value. The device has three magnetic sensitivity options, 3.125mV/Gs, 5.0mV/Gs, and 2.5 mV/Gs.

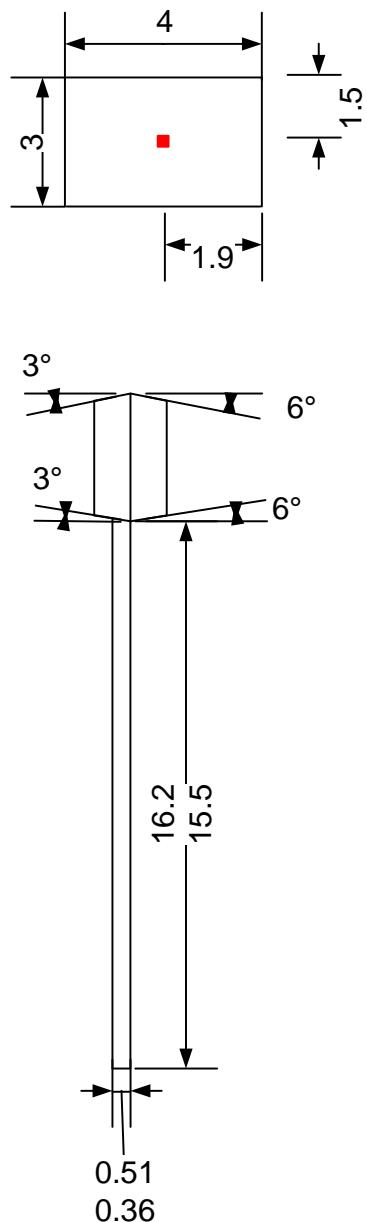

## PACKAGE INFORMATION (UA)

**3-Terminal
