

### POWER MANAGEMENT

#### Description

The SC4201 is a multi-phase link controller, ideal for isolated and non-isolated applications. Its frequency of operation can be programmed in excess of 1.5MHz and can be easily synchronized to an external faster frequency. The SC4201 output frequencies can be set to 2/4 or 3 phase operation. A single pin can either set a 4 phase operation (each phase is 90 degrees apart) or 3 phase operation (120 degrees apart).

Multi-phase operation of multiple primary or secondary controllers reduces input/output ripple, the number of components required for filtering, and noise due to frequency beating generated by multiple free running oscillators.

The SC4201 is available in the MSOP-8 surface mount package.

#### Features

- ◆ Low cost/small size
- ◆ Programmable frequency up to 2MHz, each phase
- ◆ Synchronized to faster frequency
- ◆ Programmable 2/4 or 3 phase operation

#### Applications

- ◆ Telecom distributed power architectures
- ◆ Multi-phase operation of power supplies
- ◆ Multi-phase operation of switching regulators

#### Typical Application Circuit

## POWER MANAGEMENT

### Absolute Maximum Ratings

Exceeding the specifications below may result in permanent damage to the device, or device malfunction. Operation outside of the parameters specified in the Electrical Characteristics section is not implied.

Parameter	Symbol	Limits	Units
Supply Voltage	$V_{IN}$	7	V
Operating Ambient Temperature Range	$T_A$	-40 to +105	°C
Operating Junction Temperature Range	$T_J$	-40 to 125	°C
Storage Temperature Range	$T_{STG}$	-65 to 150	°C
Lead Temperature (Soldering) 10 sec	$T_{LEAD}$	+300	°C
Thermal Impedance Junction to Ambient	$\theta_{JA}$	206	°C/W

### Electrical Characteristics

Unless specified:  $T_A = 25^\circ\text{C}$ ,

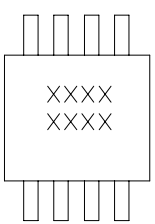

Parameter	Symbol	Conditions	Min	Typ	Max	Units
Supply Voltage	$V_{DD}$		3		6	V
Supply Current	$I_{DD}$	$V_{DD} = 6\text{V}, R_T = 20\text{K}$		2		mA
VDD Start Threshold			2.70		3.10	V
VDD UVLO Hysteresis				100		mV
Output Frequency	$F_{OUT}$	$V_{DD} = 6\text{V}$	0.1		2	MHz
Output Frequency Accuracy		$V_{DD} = 6\text{V}$			10	%
Sync Input Threshold	$V_{SYNC}$			VDD/3		V
Phase Accuracy		$V_{DD} = 6\text{V}$			1	%
O/P Rise Time	$T_R$	$C_{OUT} = 20\text{pF}$			20	nS
O/P Fall Time	$T_F$	$C_{OUT} = 20\text{pF}$			20	nS
Output	$V_{OUT}$				$V_{DD}$	V
Output Duration	$T_P$			(1)		nS

Notes: (1)  $T_P = \frac{T_{OUT}}{N}$  where  $T_{OUT}$  = output signal period of individual phase.

$N = 3$  for 3 phase operation,  $N = 4$  for 2/4 phase operation.

(2) This device is ESD sensitive. Use of standard ESD handling is required.

### Marking Information

 <p>TOP</p>	 <p>BOTTOM</p>	<p>yyww = Datecode (Example: 0012)            xxxx = Semtech Lot # (Example: E901)            xxxx = 01-1)</p>

**POWER MANAGEMENT**

**Pin Configuration**

**Ordering Information**

Part Number <sup>(1)</sup>	Package
SC4201MSTR	MSOP-8
SC4201EVB	Evaluation Board

**Note:**

(1) Only available in tape and reel packaging. A reel contains 2500 devices.

**Pin Descriptions**

Pin	Pin Name	Pin Function
1	RT	Oscillator frequency is configured by connecting resistor R from RT to ground. Values for R can be selected to provide desired 3 phase or 4 phase output frequencies. $F_{OUT} \approx \{[1.25 / (15pF \times Rt)] / \text{phase}\}$
2	VDD	The power input connection for the device.
3	SYNC	SYNC is a positive edge triggered input with a threshold of 1.5V. SYNC should be grounded when not required or connected to an external synchronization clock with frequency higher than the on board oscillator frequency (with respect to internal clock).
4	A	Logic level output clock. Phase "A".
5	B	Logic level output clock. Phase "B".
6	C	Logic level output clock. Phase "C".
7	D	Logic level output clock and phase selection pin. Default operation 4 phase/2 phase (90°/180°). Tie D to VDD to select 3 phase operation through A, B and C 120° out of phase.
8	GND	Reference ground and power ground for all functions.

**Application Information**

Diagram in Figure 1 shows multi-phase operation of several power converters with fixed switching frequency FSW.

**Figure 1**

POWER MANAGEMENT

Application Information (Cont.)

Diagram in Figure 2 demonstrates a multi-phase operation of a single power supply with current sharing through the individual phases and with fixed switching frequency FSW.

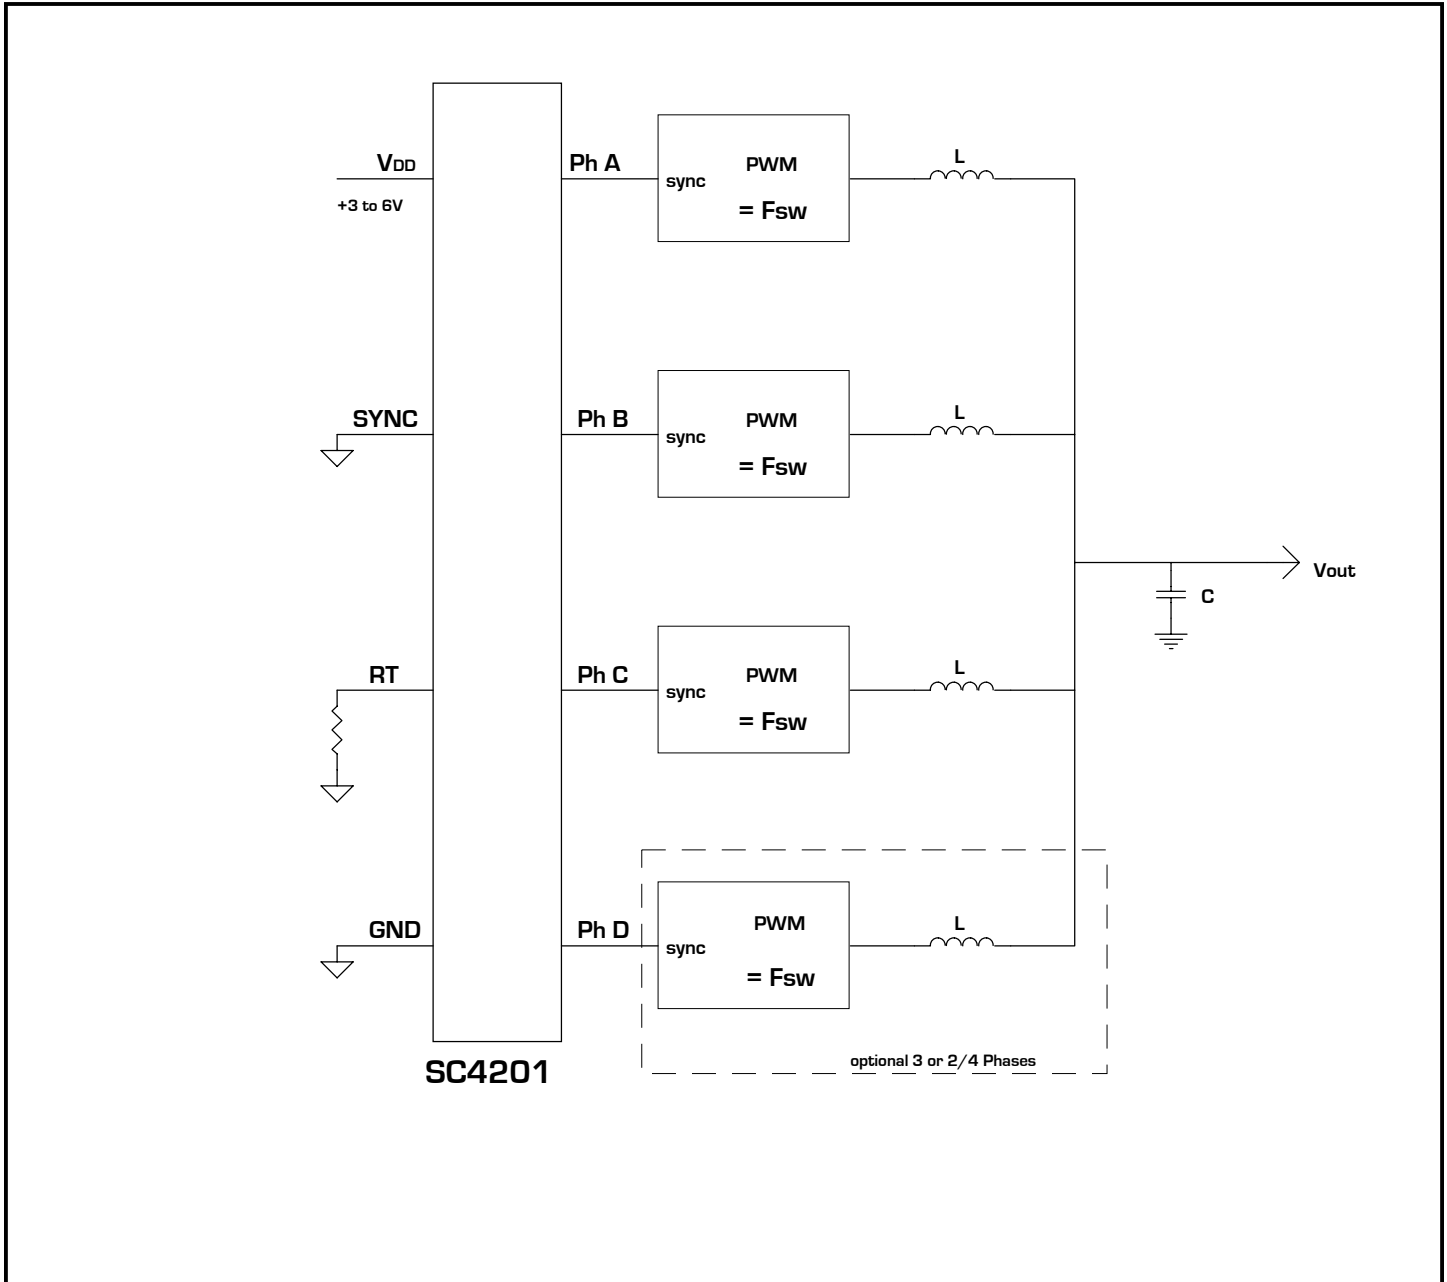

Figure 2

**POWER MANAGEMENT**
**Application Information (Cont.)**

Diagram in Figure 3 assumes variable switching frequency FSW, e.g. resonant power converters. This circuit will require additional "FSW Control" block, which is a task for a power designer.

**Figure 3**

POWER MANAGEMENT

Application Information (Cont.)

Diagram in Figure 4 demonstrates a synchronous operation of two (or more) SC4201 controllers. If the “time delay” circuit is to be employed then 6-phase, 8-phase and other configurations become possible.
