

Description

The SE8117B series of high performance low dropout voltage regulators are designed for applications that require efficient conversion and fast transient response.

In addition, SE8117B is designed to be stable under conditions where C_{in} and C_{out} are not present. However, it is recommended to include C_{in} and C_{out} in the system design as this will increase the PSRR rating. SE8117B is characterized under Junction Temperature from -40°C to $+130^{\circ}\text{C}$.

Notes:

1. Low duty cycle pulse testing with which T_J remains unchanged.
2. The I_Q of SE8117BT15 is 1.2mA(Typ.)
3. The dropout voltage is the input/output differential at which the circuit ceases to regulate against further reduction in input voltage. It is measured when the output voltage has dropped 98% from the nominal value obtained at $V_{IN} = V_{OUT} + 1.5V$.
